Readers should be aware that Internet websites offered as citations and/or sources for further information may have changed or disappeared between the time this was written and when it is read.

CHOOSING A STRAIN

A marijuana seed strain is the base of your entire grow. Depending on your individual needs and goals as a grower, you need to become aware of the different types and exactly how they will affect your garden and overall output. Choosing the best strain of marijuana for a geographical area is not difficult. Indica, Sativa and feminized are the basic cannabis families.

SATIVAS:

The polar opposite of Indicas. Tall, thin plants, narrow leaves, lighter green colors, grow quick, extend to heights of 20 feet in some cases. Origins are traced back to Mexico, Columbia and southeast Asia. Flowering times vary from 10 to 16 weeks, normally longer than Indicas. Taste ranges from earthy to fruity. A good head stone. A great outdoor favorite. Generally tend to yield a bit less as they are not as bushy as Indicas, but oftentimes are much more potent.

INDICAS:

Short thick plants, broad leaves, darker green, flowering in 8 to 10 weeks with thick dense flower tops. Flavours from stinky skunk to fruity sweet. Origins traced back to Afghanistan, Morocco and Tibet. More of a body stone. Indoor grower's favorite types. Heavy yielding.

FEMINIZED:

Designer qualities to produce only female plants. Rarely are the seeds produced but can be forced. Usually passed on as clones. Female plants mean no energy is wasted creating pollen sacks(male), which mean only the finest rich, potent, frosty sticky big buds for you.

CROSS BREEDS:

Combining different Sativa and Indica breeds will produce the corresponding traits of each mother and father. Actual percentages each strain will contain is not exact, but pretty close. If you have two favorite strains, wouldn't it be nice to be able to combine them into one potent super bud? Modern genetics has made this entirely possible.

INDOOR / OUTDOOR:

The most important thing to realize is the length of flowering time. Indoor strains don't matter but outdoor maturation would depend on your climate. If you have a short summer then go with a more Indica-dominant strain. Remember, the more Sativa in the mix the longer the flowering time. Some types of marijuana are specifically bred for outdoor, just look at your details. For indoor growing, don't choose a strain that has been designed to thrive in an outdoor environment.

HEIGHT:

Sativa stretches the most. Height is usually listed but can be controlled indoors. Light usually does not reach down past 3 feet sufficiently enough. A well grown plant can grow 1 to 2 inches a day. A two foot plant, put into flowering stage will reach just over 3 feet when done maturing in approximately 8 weeks.

POTENCY:

Marijuana(especially if purchasing from a quality seed bank laboratory) these days are very potent. Success of course also depends on your green thumb and growing conditions your cannabis is subjected to. To universally maximize the potency of *any* strain use a hot, dry atmosphere and drop the humidity when flowering.

YIELD:

This all depends on how long you let your cannabis plants vegetate before flowering. Obviously the longer the vegetation period the taller the plants, therefore more yield. Maximum indoor yields come from Indica-dominant strains.

TOP 5 BEST KNOWN STRAINS OF MARIJUANA

#1. EUPHORIA UNLIMITED BUD

The first puff has your heart starts racing and you immediately feel your eyes glaze over in pink, soon to be a very bright red. You taste kerosene at first, then chocolate and bubblegum on the exhale. The after-taste is that of exotic berries, of many types from around the world. One more small puff and you'll be cruising for 5 hours. A total of 4 puffs and you'll be Euphoric for 8-10 hours+

This strain has been to known to fetch \$60+ per gram and holds an estimated THC level of 36%.

Many actors are requesting this strain and are paying \$60+/gram. They are saying it's better than the "skinny drug" because the high is more Euphoric, lasts longer with no hangovers, allowing them to work the following day. Also, they are getting 10 times the doses from a single gram at half the cost of the "skinny drug".

When's the last time you've heard of ten cannabis seeds costing \$1000?

The current King Strain on the planet is the Indoor Trainwreck X'd with Indoor White Widow

Is there a brand new King Of The Medical Buds coming???

Only time will tell...

#2. WHITE WIDOW

The backbone of the Dutch coffee-shop industry (On the top of all dutch coffeeshop menu's, mostly the most expensive!), the first of the 'white' strains and an all-round commercial success story, White Widow is one of the most famous names in modern growing.

This strain is the strongest weed in the world.

The buds have so much THC on them that it is hard to see the bud at all.

The high is extreme and the taste divine. This weed has won more cups than any before. A must for anyone who thinks they are a smoker! While this is partly due to the memorable name, her speed, yield and stunningly thick resin coating have a lot more to do with it!

The White Widow plants got their name from being white with THC glands even on the big parts of the fan leaves. A soft smoke with an excellent high. Very powerful and great for use as a pain medicine, The White Widow is also easy to grow and delivers nothing but relief.

Mostly-Indica, with sweet, thick, acrid smoke that imparts a hammering stone, White Widow is a major part of many visitors' first experience of Amsterdam.

#3. SILVER HAZE

A strain of legend, Silver Haze has gone on to win many awards in recent years as some of the best tasting smoke the world has ever seen. Silver Haze is the first vintage masterpiece of cannabis breeding - a harmonious blend of complementary equatorial genotypes that's widely regarded as the purest and most powerful Sativa ever created. Smokers adore the soaring high, and growers find her slow flowering, low yields and unstoppable height-gain impractical for indoor production.

#4. BIG BUD

Big Bud, winner of multiple awards including the world-famous Cannabis Cup, is one of the best marijuana strains ever made. Dense yields, the taste is soothing, the buds dank, the bouquet nothing short of a tantalizing euphoria. The high is both uplifting and soaring, with a zero burnout factor and a deep purple grape taste that lingers forever.

Big Bud has long been famous as a cannabis strain with jaw-dropping yields - a must for the grower with highly ambitious intentions, The yield of this Indica marijuana strain is legendary, producing massive THC rich buds with gigantic leaves. The smoke is smooth and the high is very strong. Hands down this strain will produce the best yield than any other plant in the same space. One of the world's finest marijuana strains to date.

The taste is sweet, full of delicious fruity flavours and has great potency. Big Bud's stems are thick and

sturdy, yet the masses of giant, sweet, sparkling buds they produce can grow heavy enough to bend and even snap them.

#5. NORTHERN LIGHTS

Northern Lights is compact, fast growing and very dense, capable of producing several generous, trouble-free crops per year from seed or clone. Her frosted buds possess a honey-musk aroma blended with an earthy Afghani undertone and a hint of juniper - highly enticing when dried and smoked, yet remarkably understated when growing and flowering. Low odour and easy cultivation combined with big yields and exceptional resin production make Northern Lights the first choice in Indica - for both connoisseur quality and commercial quantity.

With its big broad leaves and large crystal covered buds, Northern lights marijuana seeds are good for dedicated enthusiastic indoor growers as it tends to bloom to be short and densely packed full of sticky potent buds in a short timeframe. This fantastic plant is currently one of the most smoked and grown in Holland. You owe it to yourself to check out one of the finest buzzes available.

(There are of course many more incredible seed strains out there, but among many recent polls held these were the results that came out on top.)

Where To Get Seeds?

Buying seeds is tricky. If you can't find a friend willing to hook you up with some quality seeds then your next best bet is grabbing your seeds online. There are a lot of sketchy companies out there nowadays. We've heard countless horror stories about online seedbank companies where lots people have payed top dollar for their seeds and never received them. Then the company mysteriously disappeared, with a disconnected phone line and complete with a missing website. What a way to blow \$200! You need to be extremely careful when buying seeds nowadays. Do not risk it - get them only from a reputable company on the internet, from magazines, or any local coffee shops around your town(if available). Stick with a reputable reliable company. You may wish to buy more than you think you will need due to germination failures.

Note: Marijuana seeds are still illegal in many parts of the world, including the United States. Please check local laws before ordering and always use a safe address. Never order the marijuana seeds directly to your grow area.

Please be careful! Over the years, I have tried various companies and after speaking with hundreds of growers as well as investing in countless of hours of personal research and money to seek them out & test them; I have determined the following list to be the current best seed banks in the world. If you are going to purchase your seeds from a different vendor, please be safe - [google](#) them first in order to make sure they are reliable and no one has been ripped off in the past, as this happens a lot. Make sure they are reputable and carry the most important foundational aspect of your entire grow – a quality seed.

As promised, here is my highly recommended list of seed banks with reviews. The following list of seedbanks are the most reliable today with the greatest quality and outstanding selection. They take every precaution to ensure that your package is delivered in a stealthy, timely, secure manner. These vendors have been in the seed business for many years and have successfully shipped countless packages to many satisfied customers worldwide. You can find them recommended on many review sites. Discreet packaging and efficient customer service guarantees these companies will continue to thrive for many years to come.

World's Greatest Seedbanks

#1. AMSTERDAM MARIJUANA SEEDS

Top choice - I dare to say these are the best in the world. Incredible strains, scarily low prices. They hold the reputation as one of the most reliable seed banks in the world. They carry a huge selection of awesome high THC/Feminized quality seeds. You also get 20 free seeds with every order!

Shipping: Worldwide

#2. BUY DUTCH SEEDS

High quality dutch cannabis seeds. Award winning strains that are shipped in super discrete stealth packaging. They only select their seeds from the best breeders. Customer satisfaction is their number one priority, so they've got great customer support and package tracking options.

Shipping: Worldwide

#3. THE ATTITUDE SEEDBANK

The Attitude Seedbank are exporters of some of the finest Cannabis seeds available in the world today. They offer hundreds of Marijuana seeds strains to choose from, expertly grown by the pioneers of the legendary Amsterdam

cannabis seeds banks. A lot of awesome breeders come together to make some badass strains for these guys and they *only* buy from the best breeders in the world. The genetics of these seeds are breathtaking! A huge selection of the finest Cannabis Cup winners fills their stock. They carry some of the biggest and most up-to-date, impressive line of feminized marijuana seeds from some of the world's top breeders & suppliers. All of their seeds are purchased fresh, then kept in a refrigerated room to maintain and ensure their freshness. The Attitude always buys the freshest marijuana seeds stock to ensure buyers get an exceptional harvest.

Shipping: Worldwide

#4. **NIRVANA SHOP**

These guys ROCK. They have sweet deals going all the time and kickass strains. The Nirvana Shop is a seed bank and online seed supplier with many years in the business under their belt. They have supplied thousands of growers with quality seeds over the years. They've emerged as the top supplier of medical marijuana seeds worldwide.

Shipping: Worldwide(except for Australia)

#5. **THE SENSI SEEDBANK**

They are the backbone of many coffee shops. Sensi Seeds' carry original cannabis strains that have won many international prizes. Multiple Cannabis Cup-winners such as Jack Herer, Northern Lights, Big Bud are all strains bred by the Sensi Seeds Laboratories. They've also been in the seed biz for 20+ years!!!

Shipping: Mostly EU only, and a few outside countries; but [attitude](#) carries em'!

#5. HEMP DEPOT

These cats take a longggg time to get you your seeds but they stock some great seeds from some rare and unique talented breeders. If you do decide to go with them, then be sure to check out Blueberry by DJ Short... it's EPIC.

Shipping: Worldwide

#6. SKUNK SEEDS

Buy your cannabis seeds here!

skunk
.co.uk

Skunk seeds rule. (Also known as Seedsman, The Seed Joint, Lowryder Automatic, etc.) They change their company name a lot but their seeds are in constant high demand and they actually filter out who they ship seeds to – they've turned away a lot of people in the past. If you can get ahold of some of these quality herb strains, you won't be disappointed. They also specialize in discrete stealth shipping methods.

Shipping: Everywhere except the USA.

Zamal (GN03) Landrace; La Reunion

STRAIN LISTING + BREEDER + DESCRIPTIONS

The near-complete largest strain base today. (Breeders in green.)

BCGA

Beauty and the Beast

Type:

Lineage: Chemo X C99

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: The production growers may want to look at this one, it should be a heavy early. Chemo's suspected polyploid nature causes it to just blast off when flowering is initiated, it's mind blowing. Chemo bud is potent with tremendous medical benefits but lack's character. Those suffering from insomnia and bipolar behavior seem to gain a lot of benefit from my chemo mom. C99 improves the bud quality and the combination has improved chemo's vigour. This strain grows as a single cola and is the best choice in our lineup for those wanting a dedicated SOG plant.

Breeding Status: Uniform Hybrid

Blueberry

Type: Mostly Indica

Lineage: Sagarmatha Blueberry Re-DJ Short

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time: Early Oct.

Breeder's Description: Because of it's genetic stability I prefer to call this a second generation Blueberry rather than an F2. Parents were purchased from Marc Emery in the winter of 1996. He told me he purchased them from Sagarmatha of Holland. They were described as being "a mostly Indica plant of superior quality. This fast maturing girl produces large, crystallized buds with natural occurring bluish hues. The berry taste is unmistakable and very pleasurable on the palate." This is a bud for those enjoying quality without being knocked out.

Over time, Blueberry's phenotype has changed from it's original release. The

newer phenotype has wider lighter green leaves. Our BCGA version retains the original deeper green thin leaf phenotype that put Blueberry on the map. Being a copy of the original version, this Blueberry is exceptional breeding material that brings unsurpassed hybrid vigour and powdery mildew resistance to it's offspring. Anyone interested in making Blueberry hybrids should make this their first choice for their Blueberry.

Growers should expect some of the seedlings to start out twisted and variegated as this is a normal trait for this variety. Most seedlings out grow this as they mature. This pure version of Blueberry is not the best choice for those looking for a blueberry production plant. The best Blueberry production plants are Blueberry hybrids such as Orange Crush.

Breeding Status: Purebreeding

Grapefruit BX1

Type: Mostly Indica

Lineage: SPG Clone X SPG Clone/Blueberry

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time:

Breeder's Description: This is a prototype release of the BCGA version of the popular Sweet Tooth. Grapefruit has an excess of sickly sweet pink grapefruit flavour and an unbeatable and powerful indica sativa combination in the potency department. The cured buds simply can't be beat. The only downside is that grapefruit only performs efficiently in a few environments, it need more vigour to be suitable to more growers. Therefore, using the unique BCGA Blueberry genetics, we crossed select Blueberry males with the legendary Grapefruit clone. We selected the best of these hybrid males and bred them back to the grapefruit clone to create the first backcross. By backcrossing once we exposed more of the desired grapefruit traits while maintaining the vigour provided by the Blueberry.

I am getting ready to test this test cross and am looking for feedback from other growers growing under a wide range of environments. Therefore I'm going to initially release 10 lots of 15 seeds each to the auction. Using these auction lots, we are also going to test out some changes to the way BCGA genetics are packaged and shipped. There is the possibility that a second set of 10 lots will be released.

Grapefruit X Blueberry

Type: Mostly Indica

Lineage: Grapefruit X Blueberry

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: The Grapefruit/Blueberry hybrid will not be a regular BCGA item. It is just a cross to share with others. Any funds generated will be donated to a cause not yet decided on. The grapefruit clone mom is the matriarch of many outstanding seedlines such as Sweet Pink Grapefruit, Sweet Tooth, Mikado, Cotton Candy, and the list goes on. Buds from this clone are what won an informal but star laden BC minicup a couple summers ago. The Grapefruit Blueberry combo is a proven winner with the Sweet Tooth line. The blueberry pollen source is the BCGA version of Blueberry. A very limited number will get to sample this one.

Both parents are fast in the flower room and should be harvested between 45 and 55 days depending on personal tastes. Buds will be a sweetly aromatic combination of blueberry and grapefruit. Although there is much indica (Afghani) influence in both parents, they both have very uplifting highs reminiscent of their suspected thai ancestry. Creating and selecting from the F2s of these seeds should keep a connoisseur grower satisfied for decades ;-)

Killer Queen

Type:

Lineage: G13 X C99

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: This is for those looking for raw potency at all costs!! G13 is the very potent mom, and C99 as the pollen source is no slouch either, but it's a guess how they will combine. This is a prototype release to test the waters. G13 should add to the punch, C99 should improve yield and flavour. Plus something caused the g13 clones to produce seeds smaller than I was hoping. Small like the sweet tooth surprise. Reaction to excess UV? So for these two reasons, despite the excellent genetics, I would like to keep the price down. Only enough seeds for 100 orders were sent to market.

Breeding Status: Uniform Hybrid

Orange Crush

Type: Mostly Indica

Lineage: AE77 Cali-O X Blueberry

Indoor Harvest Time: 50-60 Days

Outdoor Harvest Time:

Breeder's Description: The California orange mom is THE legendary clone that sets the standard for all other California oranges to aspire towards. And it has done so for close to two decades. It's super sweet Tang flavour and aroma is unequaled. It's vigour is amazing and it's ease of cloning will vastly be an improvement over the Blueberry pollen source on both accounts. The Blueberry pollen source speaks for itself and is described below. As with the Romulan mother of Romberry, this California Orange clone does very well at low (25-30 watts/foot) light levels. Both California Orange and blueberry parents are harvested between 50 and 60 days depending on taste. Most prefer the earlier end of the spectrum for the added flavour and happier high.

After a thorough testing, the Orange crush was found to be an extremely vigorous hybrid of blueberry dominance. These plants clone and reveg with ease. I hope you enjoy growing them as much as I did.

Breeding Status: Uniform Hybrid

Pink Grapefruit Cocktail

Type:

Lineage:

Indoor Harvest Time: 50-55 Days

Outdoor Harvest Time:

Breeder's Description: A previous auction item and test cross, this one turned out way too nice to not repeat. I found the buds to be very nice and tight with a healthy covering of frosting that gives them exceptional bag appeal. Because of the tight nature and frosted nature of the flowers, trimming is a breeze, just pull off the shade leaves and let dry. Grapefruit and pineapple battle for dominance in this sweet tasting blend who's aroma in the flowering room reminds me of the pink grapefruit cocktail fruit juice. Cloning was a snap as was revegging this plant. I found them to be very uniform in my soil garden and picking the best for a clone mom was most difficult. I hope others find this as much a treat as I did.

Breeding Status: Uniform Hybrid

Romberry

Type: Mostly Indica

Lineage: Romulan Joe Clone X Blueberry

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: End of Oct.

Breeder's Description: Is a very vigorous F1 hybrid of the pure Romulan female with a select Blueberry male. The hybrid retained the large sticky and stinky buds of the Romulan. It gained stronger stems and fruity aroma and taste from the Blueberry. Colas should become larger and more frosty than Romulan buds seen in Aug. 98 High Times. This one is also very easy to clone.

Breeding Status: Uniform Hybrid

Space Queen

Type:

Lineage: Romulan Joe Clone X C99

Indoor Harvest Time: 50-60 Days

Outdoor Harvest Time:

Breeder's Description: Space Queen was the only reason I invested in C99 in the first place. Ever since I heard the description of Soul's princess I knew her and Romulan would be the perfect match. Then prototype crosses between P75 and Romberry started pumping out the winners that have found keeper status in many select gardens. Each of these keepers exhibit a blend of C99 and Romulan characters.

Space Queen is a romulan/C99 hybrid. Flavour and potency are can't misses, both parents are known for their high potency and great highs. Lemon, pine, and pineapple all swirl in a pungent bouquet to tantalize your taste buds!! Roughly 50% have the Romulan pine flavour dominating. Flowering time will be comparable to Romberry averaging 8 weeks depending on grower and grow environment. Yield can be above average, but she won't be a top production plant. Her growing form will range from a 50/50 sat/indi hybrid to a full blown sativa. Some of the hidden sativa that has come forth in some seedlings have been truly the most pleasant smoke I've experienced. I hope she puts smiles on a few faces

Breeding Status: Variable Hybrid

Blue Hemp

Afghani Wonder

Lineage: Afghani X Pakistani

Taste: Good old black Afghani hash

Effect: Strong bodystone, couchlocker

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: Beginning of October

Calvin

Lineage: Humbolt, California Orange/Pure Lebanese/Swiss Sativa

Taste: Fresh citric fruits with a touch of red Lebanese

Effect: Euphoric uphigh, light bodystone

Indoor Harvest Time: 55 Days

Outdoor Harvest Time: Beginning of October

Chewing

Lineage: Double Gum(sister of Alpine Rocket) X Swiss Sativa

Taste: Fruity bubblegum

Effect: Couchlocking high

Indoor Harvest Time: 60-65 Days

Outdoor Harvest Time: Beginning of October

Chilla

Lineage: Kush X Nepali

Taste: Typical Kush with fresh fruits

Effect: Bodystone, painblocker

Indoor Harvest Time: 40-45 Days

Outdoor Harvest Time: Late August - beginning of September

Chronicle

Lineage: Chronic from Serious Seeds X Lebanese X Swiss Sativa

Taste: Fruity sweet, fresh pinewood

Effect: Brainfreezing uphigh

Indoor Harvest Time: 60-65 Days

Outdoor Harvest Time: Mid October

Haze

Lineage: Haze19 X Unknown Haze

Taste: Hazy

Effect: Strong uphigh

Indoor Harvest Time: Up to 120 Days

Outdoor Harvest Time: Mid - end of October

Lebanese

Lineage: Pure Lebanese landrace, heavily selected

Taste: Red Lebanese Hash

Effect: Brainfreezing couchlocker

Indoor Harvest Time: 40-45 Days

Outdoor Harvest Time: End of August - beginning of September

Nepali

Lineage: Pure Baglung, Nepal landrace, heavily selected

Taste: Fruity bubblegum

Effect: Euphoric high with a bodystone

Outdoor Harvest Time: Beginning of October

Pakistani

Lineage: Pure Pakistani landrace, heavily selected

Taste: Spicy, fruity

Effect: Bodyhigh, clear mind

Outdoor Harvest Time: mid September

Redhaired Sonja

Lineage: Afghani/Thai X Thai/Brazil

Taste: Skunky sweet, woods

Effect: Lazyness

Indoor Harvest Time: 60 Days

Outdoor Harvest Time: Mid september

Silverado

Lineage: Siver Dream X Northern Lights #2

Taste: Honey melon, pinewoods, fresh pepper

Effect: Uphigh with a nice bodystone, not a couchlocker

Indoor Harvest Time: 60 Days

Outdoor Harvest Time: Late September

Silver Dream

Lineage: Purple Dream X Swiss Sativa X Monstera

Taste: Honey melon, fresh spices

Effect: Mindblower

Outdoor Harvest Time: First half september

BOG Seeds

Blue Moon Rocks

Type: Mostly Indica

Lineage: Blue Moon X Bogbubble

Indoor Harvest Time: 56 Days

Outdoor Harvest Time:

Breeder's Description: Two notorious hybrids, Blue Moon and BogBubble, converge to form an out-of-this-world indica worthy of intense exploration and study.

A ten-ton stone in zero gravity. Particles of smoke and dust float high in the earth's atmosphere, covering the crystalline moon with a mysterious blue veil. Beneath the scattered blue light particles are the rocks: swirls of trichome galaxies atop dense clusters of flowers which fill the night air with a sweet, berry fragrance, the finest aspects of Blue Moon and BogBubble colliding in this blue-bubblicious cosmic nymph. Indica lovers will be smitten by her classic stature and perfume-like fragrance. Like a rich dessert, she dances on the tongue and reinvigorates the overworked mind and body – and a little goes a long way. Full of determined vigor, her strident growth and flowering habits typify the overall strength of her character. Nice yields of sweet, top-shelf buds in a trouble-free 56-day photoperiod.

BOG Medley

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: BOG Medley A Combination of various of BOG's genetics, selected and mixed by him. 15 seeds per pack!

Bogbubble

Type: Mostly Indica

Lineage: Inbred from White Label Bubblegum

Indoor Harvest Time: 40-50 Days

Outdoor Harvest Time:

Breeder's Description: A pure bubblegum that was selected to be our first strain. The smell is all bubblegum and the smoke is very smooth. This very frosty strain has been my favorite for a long time. A long lasting and happy high. This mostly indica is a large yielder indoors that produces the stickiest buds you can imagine. From my tried and true BOGBG#3 Mother Plant. Flowers in 45 - 50 days.

Bogglgum

Type: Mostly Indica

Lineage: Bogbubble X Northern Lights #5

Indoor Harvest Time: 44-48 Days

Outdoor Harvest Time:

Breeder's Description: My BOGBubble was crossed with Northern Lights #5. A hardy vegger that is easy to grow. This strain resists mold and has almost no odor. New growers will find this incredibly easy to grow. Flowers in 44 - 48 days.

Grape Punch

Type: Mostly Indica

Lineage: Lifesaver X Bogglgum

Indoor Harvest Time: 44-48 Days

Outdoor Harvest Time:

Breeder's Description: A cross of Lifesaver X Bogglgum. Thick and full bodied smoke, with a distinctive punch. Excellent choice for those looking for potency in a hearty, fast growing indica.

Lifesaver

Type: Mostly Indica

Lineage: Jack's Cleaner/Blueberry X Bogbubble

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: LifeSaver! It will Cure what Ails Ya!Tooth Numbing Potency with a Deliciously sweet and fruitytaste like candy.It smells like a roll of LifeSavers. A three way cross of Jacks Cleaner, Blueberry and my BOGBubble.

This was my first truly Medical strain and it has good pain killing properties. Potent and relaxing, LifeSaver also helps with sleep. A good yielder even in smaller grows.

L.S.D.

Type: Mostly Sativa

Lineage: Lifesaver X Soma's NYCD

Indoor Harvest Time: 56 Days

Outdoor Harvest Time:

Breeder's Description: For Sativa Lovers... My most sativa-ish strain. BOG combines two very respected strains to bring you L.S.D. This is the eagerly awaited Lifesaver/NYCD cross! A very strawberry smelling and tasting plant guaranteed to leave you salivating! 8 Week flowering and very good yield potential make this a very impressive new addition to the BOG range.

Sour Bubble

Type: Mostly Indica

Lineage: Cubed Bogbubble pheno

Indoor Harvest Time: 49-55 Days

Outdoor Harvest Time:

Breeder's Description: Sour Bubble BX3: Sour Bubble- A very unusual bubblegum derived from my Bogbubble gene pool. This is my most potent strain. Sour Bubble promises to be my best medical strain to date. Flowers in 49-55 days.

Sweet Cindy 99

Type:

Lineage: Sweet Tooth #3 X C99

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: I started with SWT3 and crossed him to a nice Cindy99 girl. I have been working on this for some time now. She inherited the motivator from the SWT3 but the Cindy99 mom provides a spicy taste and the trippy quality to the high. The taste has a hint of the spicy cinnamon girl as well as some blueberry along with that lemon smell. This girl isn't low odor but she isn't very likely to mold indoors. --BOG

Sweet Cindy 05

Type:

Lineage: C99, Sweet Tooth #3 and Bogbubble

Indoor Harvest Time: 46-52 Days

Outdoor Harvest Time:

Breeder's Description: The new improved SweetCindy05 --- A three way cross of SweetTooth #3, Cinderella 99 and BOGBubble. A good yielder with buds that can taste like lemon or licorice. Easy to grow. She inherited the motivator from the SWT3 but the Cindy99 mom provides a spicy taste and the trippy quality to the high. This girl isn't low odor but she isn't very likely to mold indoors.

Canna Biogen

Caribe

Type: Mostly Sativa

Lineage Jamaica x Jamaica/NL5/Haze

Indoor Harvest Time: 65-70 Days

Outdoor Harvest Time: End of Sept/Early October

Breeder's Description: A first rate backcross (Jamaica x Jamaica/NL5/Haze) between our best female from the Blue Mountains in Jamaica and a champion NL/Haze bring us a great yielding sativa that can be grown indoors. Yield and quality are complemented by its resistancy to plagues, especially those brought about by humid climates. Time seems to stop as the senses sharpen, this sativa hybrid is a gem sativa lovers love to own.

Destroyer

Type: 100% Sativa

Lineage: Meao Thai X Mexico/Colombia.

Indoor Harvest Time: 65-60 Days

Outdoor Harvest Time: Early November

Breeder's Description: This 100% Sativa strain is a cross of Meao Thai and an early and stable Mexico/Colombia. The exceptional backcross of two of our best females took over 7 years. The total acclimatization of the mother Thai has been so difficult that we decided to introduce an earlier Sativa, as well as productive, and add its characteristics. The result is a strain which represents the state-of-the-art of Sativa with an exotic predominance of Thai. The small and numerous bracteas are covered with a big amount of trichomes full of THC, carrying even 92 trichomes in some bracteas by mm². Environmental conditions should be

rather dry during bloom and with nutrients level quite low, specially nitrogen. Medium/high yield outdoors and some less in indoors. Suitable with grows using SOG and SCROG techniques.

leshaze

Lineage: Lesotho X Skunk/Haze

Indoor Harvest Time: 60-70 Days

Outdoor Harvest Time: Mid October

Breeder's Description: Is a complex hybrid of excellent stock, the mother, a stable, early flowering plant from Lesotho, grown there in mountains 2000 mts high. The father, a Skunk/Haze with dutch roots brings us a strong hybrid which grows well both indoors and outdoors. A potent sativa high dominates this hybrid. It's sweet and spicy with an intense perfume with green and purple buds, The buds and even the stems glisten with resin tops a spectacular yield.

Sand Storm

Type: 100% Indica

Lineage: Pakistani Chitral X Moroccan

Indoor Harvest Time: 55-65 Days

Outdoor Harvest Time: October

Breeder's Description: A great plant to make hashish from two great hashish lines, both 100% indica: The mother, an indica from the Chitral Kush region coupled with an exceptional male clone from Arabene, Morocco. It gives very dense nuggets covered with resin, these plants need to be ventilated well when the buds start putting weight and density. This sweet scented plant is potent, productive and easy to grow.

Sugarloaf

Type: Indica/Sativa

Lineage: Pakistani X Manali/Columbian

Indoor Harvest Time: 55-65 Days

Outdoor Harvest Time: End of Sept/Early October

Breeder's Description: An F1 Hybrid of extraordinary vigor, large trichomes and dense, resinous buds. The mother, a beautiful indica whose seeds were brought back from Pakistan was crossed with our favorite Capricho male (Capricho, a backcrossed Manali x Colombian). This indica / sativa combination with its high proportion of calix to leaves ratio and a potent psychoactive high is also a large producer whose branches need to be tied to avoid breakage.

Taskenti

Type: 100% Indica

Lineage Uzbekistani

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: Middle of October

Breeder's Description: An F1 Hybrid of extraordinary vigor, large trichomes and dense, resinous buds. The mother, a beautiful indica whose seeds were brought back from Pakistan was crossed with our favorite Capricho male (Capricho, a backcrossed Manali x Colombian). This indica / sativa combination with its high proportion of calyx to leaves ratio and a potent psychoactive high is also a large producer whose branches need to be tied to avoid breakage.

Chimera

Aurora

Type:

Lineage: SOL's Blue Domino (The Dom) X Northern Lights

Indoor Harvest Time: 50-55 Days

Outdoor Harvest Time:

Breeder's Description: An outstanding cross of the Dom and a super sweet Northern Lights selection. These chunky ladies make great bushes, but also perform very nicely in a sog/scrog situation

C4

Type:

Lineage: Cotton Candy X Shishkaberry Red

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: Explosive! Same mothers as the Frost Bite, but fathered by shishkas! Both lines are huge yielders; the shishk brings down the flowering time and the tasty moms improve upon the flavour and aroma. The trim from these busty ladies makes excellent bubblehash- truly worthwhile. Big big fun! Yield: way up there!

C-Plus

Type:

Lineage: AE77 CaliO X DJ Short Blueberry

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: Mothered by our legendary 25 +year old Californian orange clone, and fathered by DJ Shorts Blueberry. This large producing hybrid adapts well to most growing environments, and prefers a mild diet. The last 2 weeks of this plants life will impress with the huge swelling of calyxes into light green bundles of frost. Excellent daytime smoke with a inspiring and creative high. pleasant bittersweet orange soda flavour.

Calizahr

Type:

Lineage: AE77 CaliO X Shishkaberry Red

Indoor Harvest Time: 55-65 Days

Outdoor Harvest Time:

Breeder's Description: Calizahr... the bitter orange. The 20+ year old Cali-O clone, an old elite gem that has proven her worth in gardens all over north America gets down with pollen from the Shishkaberry red line.... and large yielding, very resinous line.

The purpose of this cross was to develop a line that produces large, resinous flowers that retain the characteristic citrus flavor and aroma of the 20+ year old Cali-O mother, all the while improving upon her yield and resin production. The results culminate in an excellent plant, with lime green flowers that are covered in trichomes. Makes excellent hash.

Yield is high, plants are well suited for bush style grows.

Fighting Buddah

Type:

Lineage: Burmese Sativa X DJ Short Blueberry

Indoor Harvest Time: 50-55 Days

Outdoor Harvest Time: Mid Oct.

Breeder's Description: A heritage Burmese sativa mother hybridized with blueberry Resulting in a tall proud sativa dominant beauty with limegreen foliage and frosty sweet nuggets. Tropical limey sweet citrus nose with floral undertones.

Crystal clear inspiring high.give her room in the first few weeks and you will be rewarded with prolific sugar bushes. The resins produce some of the finest dry or water extracted hash.

Frost Bite

Type:

Lineage: Cotton Candy X Northern Lights

Indoor Harvest Time: 50-60 Days

Outdoor Harvest Time:

Breeder's Description: This frosty hybrid packs on the weight!!! She's a large yielding girl with incredible resin production and a strong aroma. 2 lbs + per 1 kW light easy using the Sea of Green technique... much more for experienced gardeners. These plants tend to stay columnar from seed, but the clones will branch given adequate space. Yield: They go huge!

Highland Mexican X Blueberry

Type:

Lineage: Highland Mexican X DJ Short Blueberry

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Mental Floss

Type:

Lineage: Unnamed Sativa X DJ Short Blueberry

Indoor Harvest Time: 55-65 days / Mid-October

Outdoor Harvest Time: Mid Oct.

Breeder's Description: A chunky, odorific prolific producer adored by commercially minded producers and hash connoisseurs. Strong sturdy stems make this hybrid an excellent choice for SOG gardens or bush style grows. Purple hued colas with a taste and nose reminiscent of sweet berry licorice and the finest oriental incense. Truly an outstanding hybrid of near miraculous medicinal value.

Mountain Jam

Type:

Lineage: Soulshine X DJ Short Blueberry

Indoor Harvest Time: 53-58 Days

Outdoor Harvest Time:

Breeder's Description: We are very proud to offer you the initial release in the joint projects between Chimera Seeds and DJ Short.

The Mountain Jam is a hybrid of the Soulshine and DJ's prized blueberry, blending two colourful and sweet flavored elites for an outstanding performer. The SoulShine has become our flagship sensimilla flower for overall odor, taste, beauty, ease of growth, quality of high and of course yield. It has a multi-angled branching pattern that seems to balance the arms so that the massive tops and tips can almost support their plumpness without assistance. Once turned to a flowering cycle, these beauties will double in size and the arm tops will be ready for a colorful harvest at 53-58 days. With proper techniques, two more harvests 3-5 days apart and you will be amazed at how much ripening will happen on the middles and bottoms, turning the calyxes into little purple candy canes. Pollinated with DJ Shorts selected Blueberry male, should bring a reminiscent smell of grapefruits, overripe mango and wild blueberries when they are ready for harvest.

Red Eyed Bride

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Sassy Frass

Type:

Lineage: Superior Afgani Skunk X DJ Short Blueberry

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Schnazzeberry

Type:

Lineage: SOL's Blue Domino (The Dom) X Shishkaberry Red

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: Spice of Life's fantastic shishkaberry fathers beef up the yield of the odourific Dom. These plants branch well and fill in with potent gland laden flowers. Serious odour control is required for most individuals, especially late in flowering! Yields are above average.

Schnazzleberry #2

Type:

Lineage: SOL's Blue Domino (The Dom) X DJ Short Blueberry

Indoor Harvest Time: 50-60 Days

Outdoor Harvest Time: Early Oct.

Breeder's Description: From the same mother as the original super-stoney Schnazzleberry. Perfect for SCROG or bush gardens. Expect bud-laden branches with a healthy stretch when flowered. Ripening of the large calyxes and huge dark amber trichomes kicks into full force at 45-50 days. Additional days add intensity to the already numbing high. Excellent for vaporization and production of connoisseur quality black hash.

DJ Short

Blueberry

Type: 80% Indica 20% Sativa

Lineage: Juicy Fruit Thai or a Purple Thai (Chocolate Thai X Highland Oaxaca Gold) X Afghani Indica

Indoor Harvest Time: 45-55 Days

Breeder's Description: We developed Blueberry from different new genetic lines, genetics that are unique to Europe. Not only Blueberry, but also Blue Velvet and Flo are developed from totally new genetics. These seed strains are of the highest quality and have not been grown in Europe before. Blueberry is a mostly Indica (80% Indica, 20% Sativa) strain, that dates to the late 1970's. A large producer under optimum conditions. A dense and stout plant with red, purple and finally blue hues, that usually cure to a lavender blue. The finished product has a very fruity aroma and taste of blueberry. It produces a notable and pleasantly euphoric high of the highest quality and is very long lasting. Medium to large calyxes. Blueberry has a long shelf life, stores well over a long period.

Blue Heaven

Type: 75% Sativa 25% Indica

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: Mid November

Breeder's Description: A very productive plant of high value as a medicinal herb. Bred for it's euphoric, anti-anxiety high this mostly Sativa (approx. 75% Sativa, 25% Indica) produces a comfortable and enjoyable, yet powerful experience. The plants are long (100 cm) with long branches making this beauty a great plant for "Sea of Green" gardens. It's a very consistent "Purple" variety. The new "Quality" for the next millennium. The quality is in the experience, not so much in the yield, which is average.

Blue Moonshine

Type: Mostly Indica

Indoor Harvest Time: 7-8 Weeks

Breeder's Description: Mostly Indica. The "Blue" version of the "white" family (white widow etc ...) A super potent blueberry indica, coated with with a strong concentration of tall standing trichomes that produce a very narcotic experience -- body high blueberry. Short stout kush plants that produce dense, tight, rock hard nuggets of trichome coated bud. A true "hash-plant".

Blue Moonshine IS NOT a White Widow cross. It is similar to the "Whites" only in its glandular resin coating. Blue Moonshine is a cousin to Blueberry, and is derived entirely from within my personal gene pool collection.

Blue Velvet

Type: 50% Indica 50% Sativa

Indoor Harvest Time: 7-8 Weeks

Breeder's Description: An Indica/Sativa cross (50%/50%) with trademark "fox-tail", buds. The leaves and buds exhibit several hues including reds and lavenders usually on the underside of the leaves. The buds have very large calyxes often with long dark stripes showing. The mature plant produces a fruity and floral mix of aroma and taste that is very sweet. This produces a very active "cerebral high".

F-13

Indoor Harvest Time: 7-9 Weeks

Breeder's Description: F-13 a Holy Grail plant of four-star excellence.

Previously unreleased, a very desirable product and potential breeder. A more sativa hybrid of medium height with long, spear-shaped, dense and resinous buds and an earlier finish-time than most sativa. The superlative quality of the finished product is remarkable: A clear, clean, crisp head of the kindest order. This girl really rings the bell every time! Not for the couch-lock crowd, this heady sativa is for those who truly enjoy its stimulating yet comfortable appeal. A real day-brightener. DJ's personal favorite from this batch.

Flo

Type: 60% Sativa 40% Indica

Lineage: Purple Thai (Chocolate Thai X Highland Oaxaca Gold) X Afghani Indica

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: September through November

Breeder's Description: Flo is a Sativa/Indica cross (60% Sativa/ 40% Indica) with very Sativa phenotypic characteristics that also matures very early. The large, tight, spear-shaped buds are made up of small, densely packed purple calyxes. The plants are taller and like to branch out. Indoors the buds are fully mature by the end of their sixth week. Outdoors the plant is a super producer when multi-harvested over a period of time. The first buds are ripe around the third week of September. About every ten days after that, new buds form and can be harvested through the end of November, if the plant can be kept alive that long. Therefore, "Flo" is ideal for greenhouse production. The motivational "high" produced by the "Flo" is quite unique, the flavor is like Nepalese Temple Hash. A most pleasant and enjoyable experience.

Flodica

Type: Mostly Indica

Lineage: Purple Thai (Chocolate Thai X Highland Oaxaca Gold) X Afghani Indica

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Mid September

Breeder's Description: A mostly indica phenotype from the Flo-line. A rare, near-total recessive indica found by chance in the "TF" ("TF"=True Floral, or its ultimate expression "Temple Flo"). Unlike the usual sativa traits associated with the Flo line, the Flodica is a near pure indica phenotype of short, stout, yet productive, structure with very large dense gland production with more of an earthen palate to the buds that produce a very strong, narcotic type experience.

Grape Krush

Type: Mostly Indica

Indoor Harvest Time: 7-9 Weeks

Breeder's Description: A very productive hybrid of high quality. This plant exhibits partial to full leaf deformities of the "crinkle" type but with good structure and heavy bud production of large calyxes, a high yield plant. The buds express a strong sharp/fruity odor with a distinct sweet/grape flavor brought out in the cure. A strong, long-lasting head/body mix is evident in the finished product. An exciting, but not "racy" head, and a mild narcotic body, very euphoric and desirable effects that most seasoned heads prefer. Yields are above average.

Old Time Moonshine

Type: Mostly Indica

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Mid September

Breeder's Description: A true Hashplant, selected for its outstanding production of large, clear gland heads. This mostly indica hybrid really packs a musky/fruity punch with a medium height producing large, dense buds glistening with trichomes. She is more musky than fruity with a burgundy/earthen flavour at cure. Top notch Moonshine! This will be a very limited release, so get them before the still runs dry!

True Blueberry

Type: Mostly Indica

Lineage: Juicy Fruit Thai or a Purple Thai (Chocolate Thai X Highland Oaxaca Gold) X Afghani Indica

Indoor Harvest Time: 7-8 Weeks

Breeder's Description: The ultimate hybrid of Blueberry expression, selected for its superior quality from a large pool. This hybrid contains the best from both worlds (indica and sativa). Medium height with long, fruity and productive buds of medium sized calyxes. Beautiful lavender hues become apparent soon into the flowering cycle. The finished product is of the highest quality with sweet, elongated blueberry buds destined to please the most finicky of palates. High resin production as expected from the Blue family. Above average yields

Dutch Flowers

A13 X C99

Type:

Lineage: (Apollo 13 X (Genius X Princess .75)) X Princess .94

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Composed of two of the most beloved strains in the market, this cross needs no introduction. We like to emphasize this is actually Genius x Princess .75 x Princess .94. Several commercial operations are based on selected clones of this cross, impossible to go wrong.

A13 Trip

Type:

Lineage: Brother's Grimm Apollo 13 X Positronics Haze #19

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Apollo Trip (Apollo 13 f2)

Type:

Lineage: Brother's Grimm Apollo 13 X Brother's Grimm Apollo 13

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Big Hawaiian

Type:

Lineage: Sensi Big Bud X Federation Hawaiian Sativa

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: The Big Hawaiian (a cross of Sensi's tremendous yielder Big Bud female and our excellent Hawaiian Sativa male from Federation) is a very happy genetic match: the outstanding Hawaiian Sativa has provided its non-paranoid, energetic and UP high, while leaving intact Big Bud's extreme talent for producing surprisingly HUGE colas. This is a serious contender for the commercial strain crown with yield and ease of growth, yet it is a tasty, lemony sativa dominant high... if you thought that a soaring cerebral high had to come

from a skimpy-yielding plant, this is the hybrid for you.

Blowfish

Type:

Lineage: (G13 X Oregon Funk) X (G13 X Blue Dot)

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Named after the deadly Japanese delicatessen, this breeding project begun when we set out to improve taste and yield two weak traits of the G-13 by using Oregon Funk as a pollen donor. The results were quite pleasing but the smoke test revealed that G-13's power had been downgraded somewhat. Then it was the turn of a very impressive Blue Dot hybrid stud, which qualified the G-13 with great taste and no harm to its potency, although this time yield was less than desired. Finally, we applied heavy selection to each of these two G-based lines, and crossed them giving rise to Blowfish, a winning combination of G-13's deadly punch and the quality and taste of the Funk and Dot lines.

Blowfish exhibits great F1 vigor and disease resistance in a well-behaved plant that avoids the undesirable traits of "blue" genetics (difficult to grow, brittle, leafy, poor calyx to leaf ratio) while maintaining the flavor of the Funk and Dot ancestors and the brain-warping power of the G-13. A prolific flower producer even under poor conditions (it actually prefers low nutrient levels), this low-maintenance strain bears wonderfully dense buds, with a thick coating of milky crystals that will rival the best of the "white" strains in both crystal coverage and brain-thumping quality, with much better flavor and yield. We are proud to offer a hybrid carrying no White Widow, Northern Lights, Skunk or Blueberry in its composition.

Parental selection focused on potency and yield, as taste and resin genes were already well fixed on the Funk and Dot lines. Outstanding ancestors infuse the plant with a high quality feel, evident in the glossy leaves, harmonious phenotype and the particularly frosted, heavy and aromatic buds. Blowfish tends to branch out while adding girth to flowering clusters, forming sizeable snowy colas for excellent yield. Despite the remarkable density of its bud structure, mold and mites have not been a problem. This fish likes plenty of water as well as appropriate root and growing space, but prefers low levels of nutrients to fully express its potential. Very well-suited for bubbler systems and SCROG styles.

Blowfish retained the breathless intensity of G-13, with much better yield and a unique taste of berries and motor grease with fuel undertones that will appeal to pot-snob. The experienced puffer will recognize a rotten animal scent lurking in the background of this Puffer, a sign of the abiding sativa influence that was a common denominator in parental stock selection. Its buds smoke very smooth and clean, with a great berry taste and a hashy feel that relates to its impressive crystal coverage.

Known as Fugu in Japan, Blowfish flowers live up to its namesake as a lethal delicacy with a body-paralyzing yet heady cerebral effect that defies traditional "Indica" and "Sativa" classification. The plant's elegance stands in sharp contrast with the muscle and intensity of its buds, which stun the body but thrust the mind into a euphoric trippy experience with excellent visuals and duration. It does not seem to build tolerance with experienced smokers, maintaining its knock-out quality over repeated use.

Cambodian Flyer thanks to meloyelo and hort for the info on this

Type: Mostly sativa

Lineage:

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time:

Description: **hort:** - 3 seeds started; two males and one female. In veg. all looked similar and were very robust and stretched alot. In flower, the female refused to stop stretching and settle down to flower. Stretch went on for 7 weeks with small flower growth. From then on the flowers filled out nicely and gave off an intoxicating lemon scent. She was harvested at 77 days but could have easily gone another week. Buds look very sativa but dried fairly tight and dense. The lemon smell continued without change. The high is very euphoric, light, smooth and clear. No body to it but a very happy feeling lasts long after the high has faded. Comedown is easy with no tiredness or lethargy.

meloyelo: Vigorous, uniform growth, very slight variation. Does well with low nutes and somewhat drier soil conditions.

Vegged to alternating phyllotaxy.

During flower, stretch was captured right at 3 weeks and stopped. Likes to get close to the light without adverse affect. My preference is to train rather than top this one as it promotes a huge thick main cola of densely packed flower clusters. Flowers with a light pinesol aroma inside a mildly skunky perimeter. Dried cured

buds have a sticky lemony essence when broken. Taste is pinesol with a hashy bite.

High is euphoric, floaty, mentally stimulating, physically relaxing, no burnout. Haven't encountered a ceiling on this one.

Addition: both growers experienced a male that later displayed female pistils, sometimes referred to as a backward hermaphrodite. The pollen from both males was viable. The growers theorize that Dutch Flowers used such a male to help ward off South East Asian herm tendencies. All females flowered out herm free.

Champagne Fig Widow

Type:

Lineage: Champagne X Fig Widow Queen

Indoor Harvest Time: 50 Days

Outdoor Harvest Time:

Breeder's Description: Champagne is a clone from the British Columbia area, famous for its exceptional quality that after being grown for over 15 years has achieved legend status. We love hunting down clones, and a number of coincidences (as well as the customary cash compensation) brought it to our grow rooms. Royally bred from exceptional parents, this Champagne x Fig Widow Queen is an excellent yielder of fruity, energetic very potent buds of top cosmetic appeal and exotic fruity aroma.

Champagne is very easy to grow even under low light intensity, has low odour when growing, is very productive with chunky dense resinous buds, and it smokes creamy smooth. It is a reigning member of a "Clone Ivy League" of sorts in the BC area, along with Romulan, Grapefruit and Pineapple. Better phenotype than fellow clone Romulan, more euphoric and powerful than the Grapefruit.

In order to develop a seedline, we decided on a Fig Widow Queen male which has a track record as a resin, yield and potency enhancer. The FWQ has vastly improved the bud structure of the Champagne to a multitude of great looking bud sites donned with thick, dense and long flowering clusters for excellent yields. FWQ has also made Champagne not just mold resistant, but mold immune.

Our Champagne x FWQ has huge yields of extremely dense and heavy buds, with an excellent crystal covering and a sparkling fruity lovely smell that will

please your taste buds. Pistils cure to a nice champagne color, and the high is really powerful, taking after the trademark complexity and intensity of the Fig Widow father. The smoke itself is mellow, sweet-hashy tasting with a marked tropical fruit overtone.

Awesome branching "candelabra" phenotype when topped, our Champagne guarantees top yields of heavy, huge, frosty dense buds. Has tested free of mold and bud rot, which can be a problem with pure Champagne clone. Low odour when growing, very faint odour even when smelled up close.

Excellent choice for growers looking for great yield with a very high calyx-to-leaf ratio, unusually long and thick flowering clusters are a joy to witness. Buds inherited the excellent cosmetic appeal of the Fig Widow Queen, chunky floral clusters with champagne colored pistils covered in what appears to be confectioner's sugar and very appealing fruity sweet aroma.

Very powerful, intense and energetic high, that never enters paranoia land but stays very positive and pleasurable. Curiously long lasting high, it ends without body aches or munchies, no undesirable after effects. Taking after FWQ, it does not build tolerance.

A quick, productive plant that is ready in scant 50 days, in which resin is produced abundantly on compact, near no-leaf buds. The energetic, powerfully cerebral high is reliably strong: jaded smokers will not develop tolerance (unlike the Champagne clone by itself).

Classic Champagne mold problem has been fixed via heavy selection, and with the help of the FWQ breeder. Now you can enjoy all the properties that made Champagne famous, without worrying about mold, and with sharply improved potency and bud structure.

Chocolate Trip

Type:

Lineage: (Indigo Diamond X Chocolate Thai) X (Chocolate Thai X Indigo Diamond)

Indoor Harvest Time: 50 Days

Outdoor Harvest Time:

Breeder's Description: Chocolate Trip will please indoor growers looking for exotic sativa quality in a highly manageable hybrid exhibiting the curiously strong chocolaty sweetness and brain-wiring psychoactivity of fabled Chocolate Thai pure landrace. Chocolate Trip's stocky, tight-noded phenotype thrives under indoor lighting, and will reward with an abundant yield of dense buds of top notch headstash quality.

We obtained Chocolate Thai from growers in Hawaii (who also sourced our Lemon Thai, already offered here). The Chocolate Thai had a classically thunderous, soaring high that immediately won everyone's preference. Unfortunately, the superb quality came with a 14 week flowering period price tag. The buds were incredibly aromatic and resin coated, but very spindly, with strings venturing on their own out of the thin main floral cluster, giving it an overall skimpy braided look. Curious structure, definitely landrace looking, but hardly productive even outdoors. Our Chocolate Thai source had warned that to obtain a reasonable yield outdoors, his method was to crowd many plants in a limited space outdoors, in a style reminiscent of hemp grown for fiber.

While the Lemon Thai only needed heavy parent selection, the Chocolate Thai demanded a lot of work to make it worth growing for the indoor grower. We used an Indigo Diamond female crossed to a male Chocolate Thai and selected the best female out of over a hundred seedlings. This female was then pollinized with a pollen pool composed of the three best males of a twin cross where the roles were reversed, i.e. a Chocolate Thai mother crossed with an Indigo Diamond male.

The resulting Chocolate Trip passes with flying colours the flowering time and yield breeding goals: it takes around 50 days or less to flower, and is an extremely generous producer of hefty, thick buds that carry the trademark spicy sweetness of the Chocolate Thai. As a result of heavy selection, the Chocolate Trip exhibits an amazingly short and bushy phenotype: will finish under a meter (40 inches) tall if flowering is induced at 16 inches. This plant will yield an

average of 4.5 ounces of exceptionally aromatic buds that retain the vanilla candy taste and trippy psychoactivity of the Chocolate Thai.

The Chocolate Thai has passed all its extreme sweetness and spicy exotic taste on to our Chocolate Trip. The taste is exceedingly sweet, and flavor is highly appealing with a very strong vanilla note over a peanut butter background. It is this extreme vanilla sweetness over a peanutty base that brings the smell so close to chocolate, although we are sure that the uncanny chocolate smell in some imported Thai is the result of a peculiar curing procedure that may include substances unrelated to cannabis.

Chocolate Trip's Indica base hits very hard, but still gives an extremely energetic, lucid, visual high. It has both a lot of "bass" and "treble", yet the overall tune is definitely speedy, like a dance track. The Chocolate Trip prowess is to satisfy the Indica and Sativa lovers equally, even when it is clearly sativa dominant in both high and taste. This allows for a powerhouse high, but there is no "dumb" or "lock" effect: remarkably cerebral and active, with a knack for inducing visuals (as some smokers report colours).

Stocky, tight noded phenotype, great yield, quick flowerer, Chocolate Thai high and taste with a hard punching Indica base make the Chocolate Trip an excellent all-around strain for growers looking for landrace qualities in an easy to manage plant.

CIA Shiva

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Columbian Red

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Seeds were obtained from an awesome looking bud bought in Bogotá, Colombia, so there is no question on its origin. They were then grown by a member of the Dutchflowers team who was immediately

impressed by the homogeneity and vigor of the plants, which looked like clones of the same mother with medium width blades in their leaves. The resulting buds are VERY TASTY and SWEET, with very attractive RED PISTILS, producing an UP and CLEAR SATIVA high that is NEVER PARANOID even if overdone. This is a PRODIGIOUS YIELDING variety: upwards of 4.5 pounds per fully grown outdoor plant (!), with the worst yielding female weighing in at 2.7 pounds... and yes, this is dried and trimmed. Gentlemen, this is the epitome of a COMMERCIAL strain: very sexy-looking oily RED PISTIL buds, extremely TASTY and SWEET, RECORD YIELDS of SATIVA high buds. This is a never-hybridized tropical plant, so you need to be around 36° latitude north or warmer to have it mature outside around the first week of November.

Columbian Supremo

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: This F1 cross reigns Supremo in our Colombian landrace breeding program as it is vigorous, easy to grow, tight-noded for a sativa, quick flowering with a generous yield of dense, high calyx-to-leaf ratio flowers. Colombian Supremo boasts old school sweet-fruity flavor and classic sativa soaring, mind-warping high in donkey-dick colas covered in white crystals.

Colombian genetics have been at the center of DF breeding efforts for a long time, and many growers have contacted us regarding availability of Colombian-based developments, attesting to the enduring popularity this landrace earned back in the 1970s. We have worked intensively with over eight different landrace Colombian lines and crosses, to identify winning phenotypes bearing the classic Colombian mind-warping cerebral high. This was not an easy task, as the Colombian landrace strains we obtained and worked with showed a wide range of highs and phenotypical expressions, from soaring to stupefying, from acid to bodily narcotic, many lanky with unsuitably long flowering.

The Supremo is the first Colombian-based cross to meet our multiple goals, both from a gardener's and smoker's perspectives. It has been heavily selected for ease of growing indoors, with a very well-behaved phenotype that remains tight-noded and friendly low stretch, thriving even under low-light indoor

conditions. It is very quick to show sex, and takes an average of 55-60 days to produce big, dense, frosty white buds with a very pleasant sweet, fruity-piney aroma that is very smooth and lung-expanding. Long, thick colas are of the classic "donkey dick" structure, very thick and dense, with remarkably high calyx-to-leaf ratio. Very little manicure is required.

Flowers are an appealing bright lime green, but appear white from a distance due to heavy resin production. Unlike regular Colombian fluffy buds, most individuals exhibit dense flowering structures with very little leaf. The smoke is very smooth, with a sweet, piney-fruity spicy smell that old-timers will recognize as classic Colombian taste, even if poorly cured. The high is of throwback quality, powerfully psychoactive and nearly all-cerebral, with few body signals. The very strong mind-lifting, get-up-and-dance high avoids paranoia and stays clear and focused. This is an old-school Colombian sativa however, so it can bring about heart-racing and even panic for users not used to strong sativas or if overdone, due to creeper effect.

Please note Colombian Supremo is not recommended for smokers identifying "potency" only in narcotic, lowdown, body-numbing, couch-locking stones, as the Supremo's sativa-engined clear cerebral high will bring opposite results.

On November 2000 we introduced our first Colombian landrace here on C-Bay. We are very pleased to be able to offer Colombian Supremo two years later, for this means C-Bay has lived up to its promise in the face of hostile laws, and we have retained our freedom to quietly breed and offer our work. Except for the memory of growers who have not been so fortunate, it feels like an Anniversary and we extend our safe wishes to bidders and fellow sellers alike as we approach the Holiday Season.

Durban Fig Widow

Type:

Lineage: Dutch Passion Durban X Mota Fig Widow

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: The Durban Fig Widow (a cross of Mota's elusive Fig Widow male and our best Durban from DP) resulted in a big yielding (2x beer can sized buds) early sativa with unique licorice flavor, outstanding short branchy phenotype, and great laughing, fun but still powerful high.

Fig Widow Queen

Type:

Lineage: Fig Skunk, Aloha White Widow and Cinderella 99

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

G13 X Fig Widow

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

GHaze

Type:

Lineage: G13 and Über Candy Haze

Indoor Harvest Time: 60-70 Days

Outdoor Harvest Time:

Breeder's Description: This hybrid is 75% G13 clone. The first such offering ever yet retains its Ghaze denomination because pollen was sourced from two special recombinant Ghaze inbred lines, rather than using a plain F1 male. This detour from standard backcrossing techniques allowed for more precise trait selection to be conveyed back to the G13 clone, thus raising the ante in power, resin, yield and taste.

In blind tests with experienced smokers, Ghaze Bx1 was chosen over plain G13 for raw power, high complexity, duration and intriguing acrid, greasy lemony taste. Ghaze Bx1 buds are abundant and quite dense considering the sativa leanings of the G13 phenotype, with a uniform cover of milky trichomes and brick red pistils. Its characteristic smell is pungently acrid like industrial oil or paint, although gently squeezing the bud will reveal lemony and rotten grape notes. Smooth smoke, with a hashy taste one tester described as "citrus-flavored motor grease wrapped in cellophane".

The mother of this cross has less Indica traits than other alleged G-13 clones (slender leaves in a taller plant, less odoriferous and longer flowering), and judging from the instability revealed when inbreeding its offspring, the clone is

itself a hybrid. G-13 myth and speculation aside, it is extremely potent and hard-hitting, surprisingly so for an otherwise low-profile plant.

The high is overpowering and its effect sudden: it paralyzes the mind sending it out on an amnesic, trippy whirlwind that lasts for 4+ hours. Some very experienced indica-lovers have refused to smoke G-13 a second time, after being unable to recall behavior or words uttered while under its effects.

On the other end of the spectrum, the Über Candy Haze was selected as a pollen source to contribute its acid-like quality and create a powerhouse. Our G13 clone met the best male out of many Candy Haze seedlings, selection criteria being short internodal length and early, profuse flowering traits to contribute its acid-like power for an explosive hybrid.

With over 75% G-13 genetics, Ghaze Bx1 brings together in a seedline two of the most powerful strains we have grown, a genetic goldmine representing opposite ends of the cannabis spectrum. We encourage experienced growers to look into this Ghaze, a clash of the titans resulting in a most powerful and complex high.

Specifications: ~ Flower: 60 - 70 days ~ Yield: 400 - 450 grams/m² ~ Type: Mostly Indica ~ (10 seeds)

Great White Shark X White Widow

Type:

Lineage: Great White Shark X White Widow

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Both White Widow and Skunk have in common a reputation for great crossability, and it shows in this cross. We have chosen to reinforce the Widow side of the Shark, so as to retain the F1 homogeneity of the resulting seedlings. Very powerful smoke (definitely not for inexperienced users), beautiful long heavy colas that are white with resin. Surprisingly fruity smell for a cross that is 75% White Widow. A fully grown GWS x WW seedling, under a 430 HPS, in a 5-gallon General Hydro bucket using GH nutrients, yielded 170 dried manicured grams, or around 7 ounces.

Green Napalm

Type:

Lineage: Nepalese Mountain Sativa and Mighty Candy

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Nepalese Temple hash is widely recognized by discriminating smokers everywhere for its unique qualities, and we have always wanted to obtain seeds to the underlying strain for use in breeding. Luckily, Nepal is not an altogether unusual tourist destination, and one visitor mailed home two sets of Nepalese cannabis seeds corresponding to distinct geographical regions. The seeds corresponding to the high-altitude Nepalese Mountain regions produced plants that immediately stood out for its manageable phenotype, early flowering and response under artificial lights, ultimately proving to be most valuable for breeding given the exotic quality of its high and distinctive taste.

The best Nepalese Mountain sativas were combined with a Mighty Candy and then selectively inbred to improve stem strength, reduce internodal distance and sativa stretch, and contribute to flower density. Inbreeding Green Napalm for several generations has proven successful to stabilize several desirable traits, most notably a short 8 weeks flowering period and top notch bud quality. Flowers are bright lime green with orange pistils and very few leaves, but it is their crystal coverage and intriguing aroma that sets them apart.

Trichome production is remarkable, flowers and part of leaves are uniformly covered with sparkling crystals. Pondering at this resinous blanket immediately reminds that Nepalese landraces have been selected for centuries to make legendary Temple Ball charas, a pot snob's equivalent to the very best French champagne. Incidentally, the best champagne in world is thought to be Louis Roderer's Crystal, a name that seems to validate our analogy. Flowers have high calyx-to-leaf ratio, which is unfortunate because Temple Ball hashmaking should be mandatory for all Green Napalm growers.

Aroma is intriguing and complex, and testers refer to flowery, spice and fruit notes to describe it. Inbreeding has not affected the wide spectrum of aromas found in Nepalese seedlings, making it exciting to ascertain each individual's unique makeup. Most seedlings fall into three basic terpene signatures, all carrying a fruit & spice combination: strawberries / sage, pineapple / rosemary, and peach / mint. All three are uniquely tasty and sweet, with a disturbing rotten

meat smell lurking in the background, but this note is only perceived by the sharpest noses. GN makes a good stealth plant, as it has very low odour when growing.

High is perceived immediately, but will creep and get stronger during the next half hour, taking the smoker progressively higher up through several stages to a very clear final destination. A drug testing program volunteer described this final state as one of “intense lucidity,” strong, cerebral and very creative. No trace of couch lock at any point of the experience, this is a flower for the thinking, active man. Very visual, clear and inspired, it makes a good choice for musicians and anybody looking to enhance leisure and social activities, although it is too deep for daytime. A strictly recreational strain of no medical value: no body-numbing or pain-relieving effects; not an appetite inducer.

Haze/Skunk

Type:

Lineage: Skunk #1 X Positronics Haze #19

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time:

Breeder’s Description: A true classic. Awesome original Positronics Haze #19 (father of our Apollo Trip) crossed with the authentic vintage Skunk #1. Most of our early breeding efforts were made just trying to defeat this cross... and it's a very tough job even today. Painstaking parent selection out of dozens of already selected prospective individuals has resulted in a phenotype that is remarkably easy to grow, yet retains all the wonderful sativa qualities in the high. Sparkling clear, cerebral and totally up, lucid and visual effects. Taste is sweet and very smooth, with a haunting sour & metallic flavor. Very good yielder of thick oily buds, often bigger than two to three beer cans tape together.

Merciless Darwinian selection was employed to select prospective parents and breed out typical Haze quirkiness, ensuring exceptional vigor and optimum health instead. Notably quick finishing for a Haze, takes 8 to 10 weeks to flower depending on individual selected, growing conditions and the genetic age of the clone mother. This is the epitome of the head stash strain for personal consumption, and a top Haze choice for commercial gardens.

(thanks to **B-O-H** for the info)

Hindu Kush Special (Hindu Kush f2)

Type:

Lineage: Sensi Seeds Hindu Kush X Sensi Seeds Hindu Kush

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: We grew 32 seeds from Sensi Seed Bank, and even when the seedlings were quite consistent, we still selected what we considered to be the best female (tough choice!) and two impressive looking males for mixed pollen.

Indigo Blue

Type:

Lineage: Bubblegum and Oregon Funk

Indoor Harvest Time: 44 Days

Outdoor Harvest Time:

Breeder's Description: Indigo Blue is our most reliable breeding "miracle worker," passing on its excellent traits consistently to its progeny, both as clone mother and pollen donor. Even when IB was developed primarily for its use in breeding, it has of course proven an absolute pleasure to grow on its own as well, unconnected to any breeding programme. Since overall quality and vigour in crosses (F1) depends heavily on the intrinsic consistency and unrelatedness of the parental strains (P1), we worked to stabilize our star GCA strain growing out successive generations under intense selective inbreeding, and are now releasing the resulting IBL/IB as an auction-only item. Only 3 lots will be auctioned, so that winning bidders are afforded ample opportunity to recoup expenses by offering IB pure and crosses in subsequent C-Bay auctions. This way, DF preferred role as breeder and primary introducer is fulfilled, leaving dissemination and seedmaking to be carried out by growers self-appointed to the task.

Our Bubblegum clone and Oregon Funk are two key components in IB, and we are pleased to have left ubiquitous Northern Lights, Skunk and Blueberry lines completely out of its composition to produce a quintessential sweet Indica heavyweight. Indigo is indeed a violet-blue postergirl Indica type, full of power and resin, with a built-in sativa component in the high to keep its high world-class potent but not just beefheadedly stupefying. The taste of Indigo Blue is very intense, sweet berries with hashy undertones contributed by its resin coverage. The aroma is very influenced by the Bubblegum clone parent, intense

“Bubblicious” chewing gum berry taste. Very dense buds, milky crystal coverage and intense sweet chewing gum smell round-up the reasons for IB's excellent bag appeal.

A very early strain, IB needs to be flowered for about 44 days (as usual, grower preference, environment and individual selected all play a role), and is a prodigious resin producer. Solid buds are borne on long yet stocky colas showing great girth and excellent calyx to leaf ratio, which from a distance look as if they were dipped in a milky-oily white substance, with violet-blue (indigo) tinges. Despite bud density and crystal production, IB has shown herself to be mold resistant. Crystal coverage is surprisingly heavy at mid-flowering (around 25 days) expressing not only on buds but on fan leaves as well, making IB a prime bubblehash producer. IB has been selected for outstanding yield, 125gr and upwards of dried bud can be expected from each plant. Bud weight makes necessary to stake IB early on to help the branches support the weight. The sticky, gooey buds pack as much punch as resin, and even when the Indica stone hits like a hammer to the head, there is a recognizable sativa streak to it, that makes it unusually clear and euphoric with remarkable floaty-visual elements.

Mighty Candy

Type:

Lineage: NCGA Mighty Chemo Widow clone x Über Candy Haze

Indoor Harvest Time: 48-52 Days

Outdoor Harvest Time:

Breeder's Description: A persistent dream of sativa lovers has been to grow full-rush sativa buds on an Indica-like plant, taking advantage of its early flowering convenience and tight crystalline buds characteristics. To this end, we have tried several Indica-dominant plants as mothers for the outstanding Über Candy Haze, and have grown the resulting F1s to completion in order to find the best combination. The MCW x Über Candy Haze was the clear winner: it allowed us to bring down the flowering time of the Über Candy Haze, while at the same time keep the wonderful sativa head rush intact.

Our MCW's clone (an NCGA's vintage original) cross did an extremely good job, as it was able to fully convey its very quick flowering time and tight crystal structure. The MCW x Über Candy Haze takes between a mere 48 to 52 days to finish, matching the quickness of the better Indica dominant plants, but it

produces buds that are full-blown sativa in its effect, with almost no body or physical effects at all. The resulting flowers have taken after the Über Candy Haze in their aroma and taste, a candy sweet, exotic "tutti frutti" scent with a contrasting sour & spicy background. Very smooth in the throat and lungs, even deceptively so, since the Über Candy Haze high takes a few minutes to kick in full swing.

We heartily recommend this plant for commercial growers seeking to produce buds with that roller-coaster, trippy effect of the best sativas in a medium-short plant, with very early flowering traits. Lovely tight buds with orange hairs, totally covered in resin, borne generously (the plant is quite branchy and thus productive) on a well-behaved, nice-looking plant. Very low odour when growing, does not present security issues on that front.

Features:

Very early flowerer, takes from 48 to 52 days to finish depending on the preference of the grower, for buds which pistils are 60% turned. Obvious commercial potential. About 1 in 4 females will be an extremely early flowerer, only 40 - 44 days.

Indica-like phenotype, very easy to work with, with a final height of around 3 feet when flowered at 12 inches, pretty stealthy plant in that it does not reek or stink—very low odour. Willing cloner, roots readily.

Very tight buds with a solid coating of white crystal are liberally borne on a plant that tends to branch naturally. Excellent visual appeal, aromatic buds give off an enchanting fruity smell that's a real crowd pleaser.

Excellent yielder of trippy, head rush buds, quite suitable for screen of green type of grows. Does extremely well in bubblers (recommended!).

Very smooth, non-coughing smoke, with an extremely agreeable candy-sweet "tutti frutti" exotic taste, with a trace of a spicy-sour incense smell.

Über Candy Haze full racy head effect, near no body stone at all. Long lasting trippy high, fades away without crushing, simply lands the user in a clear, lucid state, no munchies or body aches.

The Candy Uber Haze was born to the obsession of one of our team member breeders, our resident Haze connoisseur. The Candy Haze mother met the best

male out of many Candy Haze x Neville's Haze seedlings, with selection criteria being short internodal length and early & profuse flowering traits. The Candy Haze is an outstanding producer, with lower light requirements than the typical extreme sativa, including Neville's Haze. Neville's Haze is pretty well documented by now, allegedly composed of the original Haze brought from the US to the Netherlands, then crossed with Northern Lights to produce a seedline and allow for a more manageable phenotype.

The Candy Haze is a typically sativa-intense high, and the 25% Neville's Haze in the cross has maintained the flowering period around 11-12 weeks (some lucky individuals could be shorter, with the NL influence via Neville's). A long wait for growers accustomed to indicas, but really top yields of extremely potent sativa buds, near acid-like in its trippiness; our Haze breeder actually deemed the result better than plain Candy Haze, hence the "über" or "superior" in its name. Beans produce unusually high percentage of females, so there is an excellent chance of finding two or three top-notch clone mothers. If you want to experience the Haze without being annoyed by an impossible phenotype, look no further.

Note: Given the profusion of clones in the Netherlands (which are actually more common than seeds with growers there) and the enduring popularity of the Haze, one might expect plenty of Haze clones freely circulating in both the Netherlands and Switzerland. As it turns out, the opposite is true: seldom one hears of a Haze clone. The reasons are that Dutch smokers are more fond of the narcotic than the trippy effect, and of course Indicas are much better commercial bets because of the much faster crop turnaround. Our resident Haze breeder tracked down a commercial Haze grower in Venlo, and befriended him to eventually obtain a cutting, promising he will never base a commercial coffeshop operation on that clone. He later got another reputed Candy Haze clone from a stash grower in Breda, but the Venlo proved better, and chosen for this hybrid. That's how we got our Candy Haze, which is a superb example of why Haze deserves its reputation. Not recommended to Indica fanciers or growers, the high will wire them out (or even freak them out if they are high-strung type of people) and Indica growers will become grumpy with long flowering times and fluffy-looking flowers (they become heavy in the end, not to worry).

Mighty Haze Candy

Type:

Lineage: NCGA Mighty Chemo Widow X Über Candy Haze

Indoor Harvest Time: 48-52 Days

Outdoor Harvest Time:

Breeder's Description: Quite a few growers e-mailed us requesting we put "that Mighty Candy" strain back on the auction block, so here it is with updated name. Offer these buds, you'll be the Candy Man.

A persistent wish of sativa lovers has been to grow full-rush sativa buds on an Indica-like plant, taking advantage of its early flowering convenience and tight crystalline buds characteristics. To this end, we have tried several Indica-dominant plants as mothers for the outstanding Über Candy Haze, and have grown the resulting F1s to completion in order to find the best combination. The MCW x Über Candy Haze was the clear winner: it allowed for a dramatic reduction of flowering time (down to just 40 - 44 days on some individuals) while at the same time keeping the wonderful sativa head rush of the Über Candy Haze intact.

Our MCW's clone (Mighty Chemo Widow, an NCGA's vintage original) cross did an extremely good job, as it was able to fully convey its very quick flowering time and tight crystal structure. The average MCW x Über Candy Haze female takes 48 days to finish, matching the quickness of the better Indica dominant plants, but it produces buds that are full-blown sativa in its effect, with almost no body or physical effects at all. The resulting flowers have taken after the Über Candy Haze in their aroma and taste, a candy sweet, exotic "tutti frutti" scent with a contrasting sour & spicy background. Very smooth in the throat and lungs, even deceptively so, since the Über Candy Haze high takes a few minutes to kick in full swing.

We heartily recommend this plant for commercial growers seeking to produce buds with that roller-coaster, trippy effect of the best sativas in a medium-short plant, with very early flowering traits (about 25% of the females will be an extreme early flowerer at 40 - 44 days). Lovely tight buds with orange hairs, totally covered in resin, borne generously (the plant is quite branchy and thus productive) on a well-behaved, nice-looking plant. Very low odour when growing, does not present security issues on that front.

Very early flowerer, takes from 48 to 52 days to finish for buds which pistils are

60% brown. About 1 in 4 females will be extremely fast, finishing after only 40 to 44 days in flower (these females tend to be the better yielders too). Obvious commercial potential -allows growers to churn out Hazy buds real fast.

Indica-like phenotype, very easy to work with, with a final height of around 3 feet when flowered at 12 inches or less, pretty stealthy plant in that it does not reek or stink. Willing cloner, roots readily, above-average feeder.

Very tight buds with a solid coating of white crystal are liberally borne on a plant that tends to branch naturally (we recommend pruning to 4 branches for heavy yield). Excellent visual appeal, buds sport an intense krypto-green colour and are nicely aromatic.

Excellent yielder of trippy, head rush buds, quite suitable for screen of green type of grows. Does extremely well in bubblers (recommended!). The better phenotype (tight-noded, shorter plants) tend to be the better yielders and also the most powerful (unlike many Hazy strains, where real potency is found in the stretchy, tall phenotypes).

Very smooth, non-coughing smoke, with an extremely tantalizing candy-sweet "tutti frutti" exotic taste, with a trace of a spicy-sour incense smell. Smokers liken the smell and taste to sweet tropical Kool-Aid, and some females are really close to Wrigley's Juicy Fruit bubblegum. Definitely recommended for those who appreciate good taste.

Über Candy Haze full racy head effect, near no body stone at all (some individuals hint a little body stone). Long lasting trippy UP high, fades away without crushing, simply lands the user in a clear, lucid state, no munchies or body aches.

Nam Black (Vietnamese Black)

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 9+ Weeks

Outdoor Harvest Time:

Breeder's Description: Nam F1 (Vietnamese sativa hybrid, aka Vietnam Black, aka NAM weed) -Original F1 cross: -Male Northern Vietnam/China Border (indica influence) -Female Southern Vietnam outskirts of Saigon (true breeding

pure Sativa NAM) Breeder's description: Originating from Vietnamese genetics brought back to North America in 77, she's an extremely potent exotic sativa. NOT RECOMMENDED FOR MEDICAL USERS: usually resulting in shortness of breath, difficulty breathing, raised blood pressure, leans towards paranoia. Her sweet tropical ripe mango scent and sickly sweet taste will speak for itself. Vigorous strong brancher and top heavy - support recommended. A very heavy yield compensates for a longer flowering period.

Indoor Specs: Flowering time: 9+ weeks, Height 150 cm, Yield: 1+ gm/watt
Original Auction Description

NL Haze X Durban

Type:

Lineage: Northern Lights/Haze X Durban

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Crossing a NL x Haze female to a Skunk male produced incredible successful plants like Jack Herer, Super Silver Haze and Cinderella. We thought substituting Durban in the formula would correct the long flowering period and stretchy nature of NL x Haze while keeping things very sativa, especially when many people suspect the mysterious father of Cinderella could have been a Durban. Our result is a very desirable hybrid with a Haze/Durban double sativa character, haunting licorice/sandalwoody taste, short manageable phenotype with long chunky colas the size of 3 beer cans end on end, and a soaring edgy high which is nevertheless cool, fun and social (if you don't overdo it).

Orange Fig Widow

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Oxygen 19

Type:

Lineage: Positronics Haze #19 X Indigo Blue

Indoor Harvest Time: 10 Weeks

Outdoor Harvest Time:

Breeder's Description: Both components of this inbred line have proven their outstanding quality in previous projects: Haze #19 gave our A13 Trip its notable hazey edge, and Indigo Blue provided its Midas touch to our Chocolate Trip, making it possible for a Thai-dominant high to live in an indoor-friendly plant.

Oxygen's development was prompted by the desire to enjoy the uplifting, positive mood-inducing qualities and electric ride of the Haze, without having to worry about paranoia or high anxiety episodes. Even hard-core Haze aficionados admit that our Haze #19 has on occasion caught them off balance and threw them into a cold-sweating experience they rather not repeat. Several different crosses and breeding strategies were needed to identify Indigo Blue as the winning pollen donor that turned Haze #19 into an enjoyable, strongly euphoric high in a solid yielding, blue-tinged plant with a unique spicy berry flavor.

The influence of our sweet berry Indigo Blue breeder has removed the nasty paranoid bite, allowing for a comfortable, anxiety-free high while allowing full expression of Haze's valued stimulating properties. Oxygen Haze is wonderfully mood-adjusting, providing bursts of irrepressible energy that demand expression, from cleaning the house to having sex, go dancing or running. The mind enjoys a lucid, highly creative state, while an exhilarating feeling stirs to action, without any anxiety or paranoia. Taste has also been improved, with unique raspberry and plum notes taking over the spicy, "metallic" notes typical of the Haze #19 mother.

Indigo Blue has also imbued outstanding vigour, making Oxygen easy to grow and clone, a welcome upgrade over the light and nutrient sensibilities of the Haze mother. Oxygen nearly grows itself even under lower light conditions, and its genetic stamina translates into exceptional yields. The abundant but fluffy sativa bud structure of the mother has been radically improved by the Indigo father resulting in added girth, resin and density. Big donkey-dick colas make Oxygen our best Haze-based indoor yielder yet, 150+ grams of aromatic, potent cerebral smoke in a reasonable 10 week flowering period.

Peak 19 Special (Peak 19 f2)

Type:

Lineage: Sagarmatha Peak 19 X Sagarmatha Peak 19

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Resulted from crossing the best female with the best male out of 40 seeds we purchased from Tony himself in Amsterdam, making it a heavy select, which is important given the wide variability of this breed.

Tremendous genetics, very popular everywhere as it combines the Cambodian background of the Stonehedge with the big yielding power of the Matanuska Thunderf_k.

Romberry Widow

Type:

Lineage: BCGA Romberry and Greenhouse White Widow

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Romulan X Fig Widow

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Shiva Widow

Type:

Lineage: Positronics Northern Lights/Shiva X Green House White Widow

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: The Shiva Widow (a cross of a Positronics' Northern Lights / Shiva female and our best Greenhouse White Widow male) is a true Indica champ, extremely strong indica high with crowd-pleasing mouth-watering taste and extremely attractive frosted white appearance.

It is also our yield champ, with an average of 3-4 ounces dried per plant (80 to 100 grams per plant!) after 60 days (you can harvest before but you will be

missing a lot of yield). Plant is quite short, measuring only 24 inches after 5 weeks vegetation from seed. The typical main cola is 35 grams dried weight. Buds are very swollen and crystallized, needing almost no manicure at all as it has very few leaves.

Expect 3 to 4 ounces dried per plant when flowered at 24 inches for 60 days!

Shiva Poison

Type:

Lineage: Positronics Shiva X Durban

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Our most resinous Shiva female from Positronics was pollinated by our stockiest Durban male to come up with a very FLAVORFUL, very EARLY, DEPENDABLE indica/sativa cross that is a favorite of many friends who enjoy its cool & easy, CLEAR and SOCIAL high that is noted for its EUPHORIC and LAUGHING qualities. This is a production, well-rounded hybrid that has turned out MUCH superior to our inspiration for it, Quicksilver by THSeeds/CIA in Amsterdam (which is in turn a cross of an Afghan and a Durban). Chunky, meaty, heavy, gooey buds are produced by this very vigorous F1.

Sugar Klingon

Type:

Lineage:

Indoor Harvest Time: Kingonberry X Fig Widow Queen

Outdoor Harvest Time:

Breeder's Description: Royal ancestors on this hybrid: Bubblegum clone, original Sagarmatha's Blueberry and Aloha 98 Widow background for the Klingonberry; Fig Skunk, Aloha 98 Widow and Cinderella 99 on the Fig Widow Queen side. We applied a sativa bias in our parent selection to breed out unwanted "blue" genetic traits, and the results were sugar-berry potently euphoric. The Klingonberry name? A Swedish tester thought of Lingonberry jam at first toke (fruity & buttery), and a Trekkie familiar with the Romulan strain came up with "Klingonberry."

Our aim was to breed out the undesirable traits of the "blue" genetics (difficult to grow, brittle, too many leaves, poor calyx to leaf ratio, tale-tell stink, boring low

power stone) while maintaining the hashy berry flavor and clear high of the very best Blueberries and Bubblegums. The addition of the Fig Widow Queen has contributed extra power and superb bud structure, its crystal content reinforced by the cubed Aloha 98 Widow (pollen source for both NCGA's Blue Widow and Mota's Fig Widow).

The Sugar Klingon is the result of painstakingly heavy selection out of dozens of potential Klingon mothers. It's built for quality of high, ease of growth and yield. The reliable Midas touch of the Fig Widow Queen pollen source has made Klingon progeny an outstanding, all-around plant very well suited to commercial operations seeking to cater to the "connoisseur" market.

Phenotype: Its sheer vigor makes this plant extremely easy to grow, taking care of itself under a variety of conditions, reacting equally well to both high and low nutrient situations. Very well suited for screen of green setups. Small, medium width glossy green leaves are borne sparsely, concentrating all energy in producing thick colas that are silver with resin, allowing for an extremely high calyx to leaf ratio that makes manicure almost unnecessary. The Sugar Klingon is an elegant Christmas tree shaped plant complete with snow covering, a very grower friendly phenotype that markedly contrasts with the brittle, finicky traits of most "berry" strains. Low odour when growing, too.

Buds: Bud formation is outstanding, picking up volume and speed in the last two weeks of flowering, with surprisingly thick resin-encrusted pistils that cure to a dark golden colour. Dense, near solid buds are completely covered in shiny resin. Even the fan leaves have big portions of its surface covered with crystals, excellent material for bubble hash. Top notch cosmetic appeal: very frosty, hard nuggets, with elegant thick golden pistils and berry aroma.

Yield: The Klingon mother was the result of very heavy selection, and yield was the deciding factor. Commercial growers can expect to yield an average of 2 oz per square foot (about 1 oz per gallon of soil). This high yielding ability is a direct result of its impressive calyx to leaf ratio, buds form solid colas of exceptional girth that are silver with resin (another difference with the average "blue" strain, that tends to be very leafy and brittle). An excellent choice for screen of green.

Taste & Smell: The Sugar Klingon is a favorite for taste, with a buttery, sweet hashy berry flavor that has nice expansion in the lungs. Undescribable berry-fruity taste, always smooth and creamy. A lip-smacking mellow smoke, a

consistent crowd pleaser.

High: Very potent, extremely euphoric high, conducive to partying and socializing. A strong, clear up, always very active high that lasts for a good 4+ hours, with very nice visuals and serious zoning. Full motivation, never mentally debilitating. It is very cerebral, no paranoia or couch lock, exhilarating, funny giggling, perma-smile type of effect. Easy letdown, no hang over. Remarkably, very experienced smokers report their bodies build no tolerance for Klingon buds: it's not just very potent, but it's reliably potent over long term use. Will come out as the all-around winner, even against the most prominent "heavy hitters".

Uber Candy Haze

Type:

Lineage: Candy Haze X (Candy Haze X Neville's Haze)

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Venoberry

Type:

Lineage: Uzbekistan, Durban Figwidow and Chocolate Thai

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Venoberry is an original IBL incorporating dissimilar landraces for powerful, full body and brain effect, with marked berry flavor and solid yield. All proceeds from this auction will be equally distributed among OBSS, Duff and Tommy, the three current charity auction beneficiaries.

Years back, we tested a batch of seeds collected by a team member traveling in Uzbekistan, and an outstanding individual was kept of this Indica landrace, which is used primarily for hash making in its homeland. It was a very stocky, red-stemmed plant that put out chunky, powerfully narcotic buds covered in gooey resin in about 56 days.

A heavy-select Durban Fig Widow male was used as pollen donor to pump up yield and vigor —two areas in which the Uzbek landrace was found lacking— and add the sativa dimension in the process. The DFW has been an example of how, in plant breeding, the final product can be much more than just the sum of

its parts: its unusual terpene signature and delta-9 dominant sativa high clearly surpass either parent with excellent yield to boot.

The resulting UDFW turned out to be a solid all-around performer, with a gifted phenotype, glossy dark green leaves and a knock-out deep, Indica high. One mother in particular stood out on its rhubarb colors, couch-lock potency and a marvelous berry-cherry taste that impressed the jaded, “taste first” connoisseurs, but put the party-oriented, sativa aficionados to sleep.

A selected Chocolate Thai landrace male had its way with our UDFW clone, and its offspring grown. Then a winning, killer potent Indica phenotype mother was selected, which we felt best represented the “venom” that was added to the berry. This especial “venomberry” specimen was backcrossed using pollen from one of her children, and then the best .75 was inbred several generations to achieve IBL status.

Venomberry IBL grows with a manageable, predominantly Indica phenotype, and shows strong reaction to increased lumens like a Sativa does. The rhubarb-colored stems are visible even in early seedlings grown indoors, and the entire plant turns into a joy of purple and red outdoors under cool weather, courtesy of the Uzbek genes. Its leaves are dark blue-green, with a plastic-like shiny texture and blades that turn inward in claw-like fashion, a trait passed on by the Thai ancestor. Over 4 ounces of krypto-green, top-shelf bud can be expected from a selected mother flowered at around 12 inches, in resinous long colas. Buds look great and smell heavenly, rounding up great bag appeal.

The smoke has great lung expansion, and is quite tasty, with pronounced sweet cherry-berry notes. Indica and Sativa backgrounds compete against each other within Venomberry fueling a really strong, abidingly intense high that grounds the body but remains up and clear in the head, with great mental energy. Venomberry is unique in that it has medicinal (lower back pain) qualities, without hangover (heavy eye lids, headache) or crashing in the end.

Vintage Skunk #1 (Skunk #1 f2)

Type:

Lineage: Sensi Seeds Skunk #1 X Sensi Seeds Skunk #1

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Our Skunk 1, obtained in 1989 in Amsterdam from Sensi Smile shop, several seed crops have been grown since then. A classic variety, not comparable in potency to the top varieties of today and yet still very desirable and definitely worth growing.

Dutch Passion - Standard

Blueberry

Type: 80% Indica 20% Sativa

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: 2nd to 3rd week of October

Breeder's Description: Our Original Blueberry is a mostly Indica (80% Indica, 20% Sativa) strain, that dates to the late 1970's. A large producer under optimum conditions. A dense and stout plant with red, purple and finally blue hues, that usually cure to a lavender blue. The finished product has a very fruity aroma and taste of blueberry. It produces a notable and pleasantly euphoric high of the highest quality and is very long lasting. Medium to large calyxes. "Blueberry" has a long shelf life.

Blue Moonshine

Type:

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Middle of November

Breeder's Description: A super potent Blueberry indica, coated with a strong concentration of tall standing trichomes. This produces a long lasting very narcotic experience -body high blueberry. Short (80 cm) stout kush plants that produce dense, tight, rock hard nuggets of trichome coated bud. A true "hash-plant".

California Orange

Type: 50% Sativa, 50% Indica

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: 1st week of November

Breeder's Description: A stabilized hybrid, inbred since 1980. Can be extremely resinous, even the leaves. 50% Sativa, 50% Indica. Some plants have a pronounced citrus aroma and flavor. Very strong, fairly clear high. Yields are slightly above average. THC 7.8%, CBD 0.1%

Delta-9

Type:

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: 2nd week of November

Breeder's Description: As we think of Skywalker as the best attainable Indica, Delta 9 is to us one of the best Sativas possible. We hybridized an Isis female with a Flo male, the best Sativas in our collection. The result is a Haze-like aroma and taste from the Isis, combined with the very subtle Flo "high". This composition is almost a form of art. Good yield of excellent quality, reminding one of the best Kashmir hash from the seventies. A rich plant with big buds which Holland can be proud of.

Dreamweaver

Type:

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: 2nd week of November

Breeder's Description: In developing this variety, we started with genetic material from one of the Cannabis Buyers' Cooperatives in California. These organizations help patients to fulfill their daily Cannabis requirements, with a doctor's prescription. We hybridized this Indica with an Indica from Humboldt County (California). The hybrid is a beautiful Indica, very different from the others we produce. The high is "powerful", to quote our test team. In the beginning, a few very big fan leaves are formed, but later growth returns to normal. At harvest time, big, hard buds have been produced. In addition to the very dominant "high" and the excellent taste, yields for this plant are above average.

Durban Poison

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of September

Breeder's Description: Imported from South Africa, produced in Holland. Exclusively inbred, never hybridized, 100% Sativa. Large long bud leaves, buds are also large and long with lots of resin. A sweet licorice or anise flavor. "Up" high similar to Thai. High yields. Well suited for out crossing with late bloomers to produce earlier flowering. Also does very well under artificial light. A very popular variety.

Euforia

Type:

Lineage:

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: End of October, beginning of November

Breeder's Description: Developed by our breeders in 1996. A very fine Skunk selection, very commercial, very heavy bloom, bumper harvest, the famous Skunk high, taste not so sweet as our other Skunk selections. One of our favorites, also for greenhouse.

Green Spirit

Type:

Lineage: Big Bud and Skunk #1

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of September

Breeder's Description: Green Spirit is a hybrid of Big Bud and Skunk #1. We made this hybrid because Big Bud itself is not a very consistent strain, with very big differences among individual plants. By crossing Big Bud and Skunk #1, Green Spirit became quite homogeneous. Good results under artificial lights. Clear and strong high. The plants have an explosive flowering and are extremely resinous. Very high yield.

Holland's Hope

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: End of September, 2nd week of October

Breeder's Description: One of the first Dutch Outdoor strains, grown in Holland since the early eighties. A heavy Indica variety with a knock-out stoned. Very mold resistant. Recommended.

Khola

Type:

Lineage:

Indoor Harvest Time: 7-10 Weeks

Outdoor Harvest Time: 2nd week of September

Breeder's Description: A "high" scoring recently developed variety. Developed from Thai and Brazil strains and crossed with an early Dutch strain. Originally developed for outdoors.

Masterkush

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Last week of October

Breeder's Description: A F1 cross between two different Hindu-kush strains. Yield is high. Excellent taste and strong high. A definite among our favorites.

Mazar

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 1st week of November

Breeder's Description: This is an upgraded selection of our valued former Afghan/Skunk. We improved the variety in 1997. The taste is softer than before and we managed to improve on yield. The Afghani (Mazar-i-Shariff) part is a very short Christmas tree- like plant, 100% Indica and very resinous. The F1-cross with Skunk#1 gives the variety a bigger yield and better taste. Very good "up" high. As both parents are very consistent, the offspring is very consistent too.

Oasis

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 1st week of November

Breeder's Description: One of our most popular varieties, Oasis is our Northern Lights#2 selection. A very strong plant, almost spidermite resistant. Good yield, excellent taste and excellent high.

Orange Bud

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: A 100% Skunk selection, grows with thick hard buds and orange pistils. A very appreciated variety.

Original Flo

Type: 60% Sativa 40% Indica

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 3rd to 4th Week of October

Breeder's Description: Original Flo is a Sativa/Indica cross (60% Sativa/ 40% Indica) with very Sativa phenotypic characteristics that also matures very early. The large, tight, spear-shaped buds are made up of small, densely packed purple calyxes. The plants are taller and like to branch out. Indoors the buds are fully mature by the end of their sixth week. Outdoors the plant is a super producer when multi-harvested over a period of time. The first buds are ripe around the third week of September. "Flo" is ideal for greenhouse production. The motivational "high" produced by the "Flo" is quite unique, the flavor is like Nepalese Temple Hash. A most pleasant and enjoyable experience.

Passion #1

Type:

Lineage:

Indoor Harvest Time: 6 Weeks

Outdoor Harvest Time: End of September, 1st week of October

Breeder's Description: Passion #1 is an Indica variety developed in California in the seventies and has been grown outdoors in Holland since 1980. Smokes soft with a citrus like aroma and has a good high. Easy to grow, grows with long compact resinous buds. One of the best green outdoor varieties worldwide.

Power Plant

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: 2nd week of October

Breeder's Description: Power plant (mostly Sativa) was developed by Dutch Passion in 1997 from new South African genetics. This strain has been inbred only, never hybridized. Very rich in THC. It is a strain with an enormous grow potential. Indoor as well as in a greenhouse the plants have an enormous yield. Indoors flowering starts already one week after turning back the light cycle to 12 hours. Outdoor, flowering starts late, but the plants ripen very fast. This variety is very uniform. Strong "up high", very soft smoke.

Purple #1

Type: 50% Indica 50% Sativa

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: 2nd half of September, 1st week of October

Breeder's Description: A strong plant (50% Indica, 50% Sativa), easy to grow. Purple Afghan seeds have been crossed in Holland with Indica and Sativa varieties since 1983. The plants are fully adapted to the Dutch climate and have a respectable yield. This variety has calyxes that turn purple, starting at the beginning of flowering.

Purple Star

Type: 100% Indica

Lineage:

Indoor Harvest Time: 6-7 Weeks

Outdoor Harvest Time: 2nd half of September, 1st week of October

Breeder's Description: Very strong and easy to grow purple variety (100% Indica). Very resinous, having a heavy perfumed aroma. The aroma is a little rough, but the variety is very high. About 50% of the plants turn purple. THC 5.7%, CBD 0.6%

Shaman

Type: 87.5% Sativa 12.5% Indica

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 1st week of October

Breeder's Description: This is our former variety Purple/Skunk. This variety is a hybrid (F1) of Purple #1 and an early Skunk. About 50% of the plants turn purple during flowering. 87.5% Sativa and 12.5% Indica. One lab's report on this variety was THC=13.7%, CBD=0.4%

Skunk #1

Type: 75% Sativa 25% Indica

Lineage:

Indoor Harvest Time: 7-11 Weeks

Outdoor Harvest Time: 1st half of November in a greenhouse

Breeder's Description: Skunk #1 (75% Sativa, 25% Indica) was originally a cross between 25% Afghani, 25% Mexican Acapulco Gold and 50% Columbian Gold. This variety is a stabilized homogeneous strain. Blooms with long, thick buds, varying in color from light green to golden. Very high flower to leaf ratio. Mold susceptible the last 6 weeks of flowering. Soft and sweet aroma and a very strong "up" high. Excellent variety for indoor growing or greenhouse with darkening system. Very high yields. Easy to manicure.

Skunk Passion

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of November

Breeder's Description: Indoor Skunk Passion is back. The Cannabis promise for the next century, developed from the 007 Skunk-line. A surprising improvement. In smoke tests by a top class test team, again and again praised for its special qualities. The plant is mainly Sativa and will amaze you by its yield. The buds are not especially hard, but then again rich and equipped with many beautiful long hairs. Buds of 25 cm are no exception. It takes 8 to 9 weeks to bloom, but your patience will be richly rewarded. Guarantees a beautiful quality harvest. The high is a slow rising one, may take several hours and diminishes slowly after that. Absolute top class, that we recommend with pride.

Skywalker

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 2nd week of November

Breeder's Description: Blueberry (1st prize HTCC 2000, 3rd prize HTCC 2001) and Mazar (2nd prize HTCC 1999, 2nd price High Life Cup 2002) are the two unbeatable Indicas in our seed collection. Skywalker is a hybrid product of a Mazar female and a Blueberry male. The intention was to create one of the best Indicas in the world. The special Blueberry taste and aroma are combined in this hybrid with the vigor and yield of Mazar. Blueberry characteristics such as "curling leaves", slow initial growth, and bluish hues have disappeared in this hybrid, while taste, aroma (fruity and fresh), and the quality of the "high" are retained. Grown from clones at "Sea of Green", these seeds will yield about 400 gr./m2 under optimum conditions.

Strawberry Cough

Type: 75% Sativa 25% Indica

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: 3rd to 4th week of October

Breeder's Description: A very productive plant of high value as a medicinal herb. Bred for its euphoric, anti-anxiety high, this mostly sativa (approx. 75%

Sativa 25% Indica) produces a comfortable and enjoyable, yet powerful, experience. The plants have long branches, making this beauty a great plant for "sea of green" gardens. It's a very consistent Purple variety. The quality is in the experience, not so much in the yield, which is average.

Super Haze

Type:

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: 1st week of November

Breeder's Description: This variety made Dutch Passion the "High Times Cannabis Cup" winner in 1992. Formerly this strain was called "Haze/Skunk". Still one of the best for the Dutch Passion team. Originally Haze is a pure Sativa strain. It is crossed with Skunk#1 to get a bigger yield and a shorter flowering period. Truly superior sweet Haze aroma. The high is incredibly clear and "up energy". A very favorite strain from our collection. Very high yield for an almost 100% Sativa variety.

Trance

Type:

Lineage:

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: End of September, 2nd week of October

Breeder's Description: An upgrade of our former variety Skunk/Indica. With 100% Skunk seeds, it's not possible to grow fully mature outdoor plants, because the seeds were selected for growing under artificial lights and greenhouse. Skunk was crossed with an early Indica, to let it mature sooner and to make the plant stronger for outdoor conditions. This is the F1 generation. It has come out as a very nice strain.

Twilight

Type:

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: End of September, 1st week of October

Breeder's Description: A beautiful purple variety with high yields and Afghan taste. Heavy buds and high. 100% Indica.

Ultra Skunk

Type:

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: In our Swiss experiment, we flowered several Dutch and Swiss Skunk clones and several Skunk seed varieties. The goal was to select the best possible Skunk. By hybridizing the best two Skunks, we created Ultra Skunk, a very homogenous variety. Thick buds with beautiful wooly pistils. The taste is sweet, soft and fruity. The resulting "high" is up, soft but lasting.

Voodoo

Type:

Lineage:

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: 1st week of October

Breeder's Description: We developed Voodoo, a green strain, from Thai parents in 1997. The Thai parents are grown in Holland for years already. A very strong plant with long thick buds. Has a Thai aroma and a clear, fresh smell. Sativa high, very productive.

White Widow

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: The most rewarded variety of recent years in Holland. The plants are white of THC-glands, even on big parts of the fan leaves. A very soft smoke and great "High".

Dutch Passion - Feminized

Blueberry

Type: 80% Indica 20% Sativa

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: 2nd to 3rd week of October

Breeder's Description: Our Original Blueberry is a mostly Indica (80% Indica,

20% Sativa) strain, that dates to the late 1970's. A large producer under optimum conditions. A dense and stout plant with red, purple and finally blue hues, that usually cure to a lavender blue. The finished product has a very fruity aroma and taste of blueberry. It produces a notable and pleasantly euphoric high of the highest quality and is very long lasting. Medium to large calyxes. "Blueberry" has a long shelf life.

Dolce Vita

Type:

Lineage:

Indoor Harvest Time: 8.5 Weeks

Outdoor Harvest Time: Beginning to mid October

Breeder's Description: Dolce Vita, is a F1- hybrid between two Sativas. We combined our renowned Power Plant, by using it's feminized "pollen" with an Isis female. In this variety the Isis characteristics are most outspoken. Very clear Sativa "high" and subtle taste and aroma. Medium yield of hard crystallized bud. Special. Allow two weeks for vegetative growth after the seedling has stabilized, then start flowering.

Durban Poison

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of September

Breeder's Description: Imported from South Africa, produced in Holland. Exclusively inbred, never hybridized, 100% Sativa. Large long bud leaves, buds are also large and long with lots of resin. A sweet licorice or anise flavor. "Up" high similar to Thai. High yields. Well suited for out crossing with late bloomers to produce earlier flowering. Also does very well under artificial light. A very popular variety.

Euforia

Type:

Lineage:

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: End of October, beginning of November

Breeder's Description: Developed by our breeders in 1996. A very fine Skunk selection, very commercial, very heavy bloom, bumper harvest, the famous

Skunk high, taste not so sweet as our other Skunk selections. One of our favorites, also for greenhouse.

Green Spirit

Type:

Lineage: Big Bud and Skunk #1

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of September

Breeder's Description: Green Spirit is a hybrid of Big Bud and Skunk #1. We made this hybrid because Big Bud itself is not a very consistent strain, with very big differences among individual plants. By crossing Big Bud and Skunk #1, Green Spirit became quite homogeneous. Good results under artificial lights. Clear and strong high. The plants have an explosive flowering and are extremely resinous. Very high yield.

Hempstar

Type:

Lineage:

Indoor Harvest Time: 7-9 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: This variety was strongly improved in 1998, a breakthrough in the development of this variety. A sturdy plant with the power and yield of the famous Northern Lights #5. Hybridized with the best of our potent 100% Haze genetics. This variety has a solid, strong long lasting "high", combined with a well balanced, soft smoking experience. Good for bumper harvests. A perfect variety to select clones from.

Isis

Type:

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: 3rd week of November

Breeder's Description: We only produce this variety in its feminized form. In this way the "connoisseur" is guaranteed absolutely premium "Sativa" seeds. This variety has been selected from "Seed Bank" genetics. A female mother plant was chosen from among 50 female plants grown from seed. After cloning this female, different clones were treated to produce abundant "female pollen". By fertilizing other clones (backcrossing), feminized seeds were produced.

Growing seeds in this way guarantees offspring that are far more homogenous and powerful than offspring from seeds produced in the regular manner. Mostly Sativa, with a clear Haze influence. First class "high". Branches bow down at the end of the lifecycle of the plant, due to the weight of the buds.

Khola

Type:

Lineage:

Indoor Harvest Time: 7-10 Weeks

Outdoor Harvest Time: 2nd week of September

Breeder's Description: A "high" scoring recently developed variety. Developed from Thai and Brazil strains and crossed with an early Dutch strain. Originally developed for outdoors.

Masterkush

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Last week of October

Breeder's Description: A F1 cross between two different Hindu-kush strains. Yield is high. Excellent taste and strong high. A definite among our favorites.

Mazar

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 1st week of November

Breeder's Description: This is an upgraded selection of our valued former Afghan/Skunk. We improved the variety in 1997. The taste is softer than before and we managed to improve on yield. The Afghani (Mazar-i-Shariff) part is a very short Christmas tree- like plant, 100% Indica and very resinous. The F1-cross with Skunk#1 gives the variety a bigger yield and better taste. Very good "up" high. As both parents are very consistent, the offspring is very consistent too.

Oasis

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 1st week of November

Breeder's Description: One of their most popular varieties, Oasis is our Northern Lights#2 selection. A very strong plant, almost spidermite resistant. Good yield, excellent taste and excellent high.

Orange Bud

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: A 100% Skunk selection, grows with thick hard buds and orange pistils. A very appreciated variety.

Original Flo

Type: 60% Sativa 40% Indica

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 3rd to 4th Week of October

Breeder's Description: Original Flo is a Sativa/Indica cross (60% Sativa/ 40% Indica) with very Sativa phenotypic characteristics that also matures very early. The large, tight, spear-shaped buds are made up of small, densely packed purple calyxes. The plants are taller and like to branch out. Indoors the buds are fully mature by the end of their sixth week. Outdoors the plant is a super producer when multi-harvested over a period of time. The first buds are ripe around the third week of September. "Flo" is ideal for greenhouse production. The motivational "high" produced by the "Flo" is quite unique, the flavor is like Nepalese Temple Hash. A most pleasant and enjoyable experience.

Passion #1

Type:

Lineage:

Indoor Harvest Time: 6 Weeks

Outdoor Harvest Time: End of September, 1st week of October

Breeder's Description: Passion #1 is an Indica variety developed in California in the seventies and has been grown outdoors in Holland since 1980. Smokes soft with a citrus like aroma and has a good high. Easy to grow, grows with long compact resinous buds. One of the best green outdoor varieties worldwide.

Power Plant

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: 2nd week of October

Breeder's Description: Power plant (mostly Sativa) was developed by Dutch Passion in 1997 from new South African genetics. This strain has been inbred only, never hybridized. Very rich in THC. It is a strain with an enormous grow potential. Indoor as well as in a greenhouse the plants have an enormous yield. Indoors flowering starts already one week after turning back the light cycle to 12 hours. Outdoor, flowering starts late, but the plants ripen very fast. This variety is very uniform. Strong "up high", very soft smoke.

Purple #1

Type: 50% Indica 50% Sativa

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: 2nd half of September, 1st week of October

Breeder's Description: A strong plant (50% Indica, 50% Sativa), easy to grow. Purple Afghan seeds have been crossed in Holland with Indica and Sativa varieties since 1983. The plants are fully adapted to the Dutch climate and have a respectable yield. This variety has calyxes that turn purple, starting at the beginning of flowering.

Sacra Frasca

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Middle to end of October

Breeder's Description: "Sacra Frasca" or "Holy Joint" is a F1 - hybrid between Power Plant and Skunk Passion, both true-breeding varieties. Power Plant, is a renowned variety like White Widow or Orange Bud, which you will find in almost any coffee shop in the Dutch cities.. a result we are very proud of. This variety is only available in its feminized form. For the creation of this hybrid we used feminized Skunk Passion "pollen" to fertilize a female Power Plant. Therefore the features of Power Plant are most pronounced in this hybrid. Very potent and energetic up high, caused by the hybrid vigor of combining two genetically very different Sativas. Sacra Frasca also gives very good yields in a greenhouse. Through the "open" Sativa growth pattern a very mold resistant variety. Respectable yield. Bracts and also fan leaves carry lots of resin.

Shaman

Type: 87.5% Sativa 12.5% Indica

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 1st week of October

Breeder's Description: This is our former variety Purple/Skunk. This variety is a hybrid (F1) of Purple #1 and an early Skunk. About 50% of the plants turn purple during flowering. 87.5% Sativa and 12.5% Indica. One lab's report on this variety was THC=13.7%, CBD=0.4%

Skunk #11

Type:

Lineage:

Indoor Harvest Time: 7-11 Weeks

Outdoor Harvest Time: 1st half of November in a greenhouse

Breeder's Description: A very nice Skunk selection. Good results in yield and "High". Our cheapest, but nevertheless "quality" feminized seeds.

Skunk Passion

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of November

Breeder's Description: Indoor Skunk Passion is back. The Cannabis promise for the next century, developed from the 007 Skunk-line. A surprising improvement. In smoke tests by a top class test team, again and again praised for its special qualities. The plant is mainly Sativa and will amaze you by its yield. The buds are not especially hard, but then again rich and equipped with many beautiful long hairs. Buds of 25 cm are no exception. It takes 8 to 9 weeks to bloom, but your patience will be richly rewarded. Guarantees a beautiful quality harvest. The high is a slow rising one, may take several hours and diminishes slowly after that. Absolute top class, that we recommend with pride.

Skywalker

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: 2nd week of November

Breeder's Description: Blueberry (1st prize HTCC 2000, 3rd prize HTCC 2001) and Mazar (2nd prize HTCC 1999, 2nd price High Life Cup 2002) are the two unbeatable Indicas in our seed collection. Skywalker is a hybrid product of a Mazar female and a Blueberry male. The intention was to create one of the best Indicas in the world. The special Blueberry taste and aroma are combined in this hybrid with the vigor and yield of Mazar. Blueberry characteristics such as "curling leaves", slow initial growth, and bluish hues have disappeared in this hybrid, while taste, aroma (fruity and fresh), and the quality of the "high" are retained. Grown from clones at "Sea of Green", these seeds will yield about 400 gr./m2 under optimum conditions.

Strawberry Cough

Type: 75% Sativa 25% Indica

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: 3rd to 4th week of October

Breeder's Description: A very productive plant of high value as a medicinal herb. Bred for its euphoric, anti-anxiety high, this mostly sativa (approx. 75%

Sativa 25% Indica) produces a comfortable and enjoyable, yet powerful, experience. The plants have long branches, making this beauty a great plant for "sea of green" gardens. It's a very consistent Purple variety. The quality is in the experience, not so much in the yield, which is average.

Trance

Type:

Lineage:

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: End of September, 2nd week of October

Breeder's Description: An upgrade of our former variety Skunk/Indica. With 100% Skunk seeds, it's not possible to grow fully mature outdoor plants, because the seeds were selected for growing under artificial lights and greenhouse. Skunk was crossed with an early Indica, to let it mature sooner and to make the plant stronger for outdoor conditions. This is the F1 generation. It has come out as a very nice strain.

Twilight

Type:

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: End of September, 1st week of October

Breeder's Description: A beautiful purple variety with high yields and Afghan taste. Heavy buds and high. 100% Indica.

Ultra Skunk

Type:

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: In our Swiss experiment, we flowered several Dutch and Swiss Skunk clones and several Skunk seed varieties. The goal was to select the best possible Skunk. By hybridizing the best two Skunks, we created Ultra Skunk, a very homogenous variety. Thick buds with beautiful wooly pistils. The taste is sweet, soft and fruity. The resulting "high" is up, soft but lasting.

Voodoo

Type:

Lineage:

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: 1st week of October

Breeder's Description: We developed Voodoo, a green strain, from Thai parents in 1997. The Thai parents are grown in Holland for years already. A very strong plant with long thick buds. Has a Thai aroma and a clear, fresh smell. Sativa high, very productive.

White Widow

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: The most rewarded variety of recent years in Holland. The plants are white of THC-glands, even on big parts of the fan leaves. A very soft smoke and great "High".

Federation

Berlin

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: Berlin is a bushy, high-yielding, mostly Afghani-Indica plant that produces large buds and a powerful high. Great indoor or outdoor, Berlin grows well in a variety of conditions and is easy to maintain. Resilient and forgiving, easy to trim, Berlin is popular amongst the medical community for its pain and nausea relieving qualities. Tear down the wall of pain with Berlin today.

Big Mac

Type:

Lineage: Mikado X BC Big Bud

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time: Oct. 7th

Breeder's Description: Indica dominant. The fourth generation male Mikado

with all the typical traits was chosen for this cross. Male flowers started to show under 18 hours. The BC Big Bud variety originated from Sensi Seed Bank, it has Sativa leaf structure and has been acclimated to the Vancouver area for many years. Classic Big Bud size and flavor. It has the potential to be a large producer with a short flowering period. Height 6 feet.

Celestial Temple Sativa

Type:

Lineage:

Indoor Harvest Time: 10 Weeks

Outdoor Harvest Time:

Breeder's Description: he Celestial Temple Sativa (CTS) is from the area between the coast and the Andes mountains in Ecuador, an area where you find the huge banana plantations and other agricultural productions. Along the coast, daytime average high temperatures range from 84 F (29 C) to 91 F (33 C), with nighttime lows going from 68 F (20 C) to 74 F (24 C), making CTS an extremely good producing 10 week sativa that's mold and mildew resistant. Long dark jagged leaves with densely packed pinky pistils and a great calyx to leaf ratio makes trimming a breeze and a pleasure. Known in the medical community as being an extreme sativa without the extreme flowering period, the CTS has a ceiling less soaring high that will raise your heartbeat and quicken your pace. With a tropical citrus flavour and more bounce to the ounce. CTS is a great strain for an active lifestyle.

Cotton Candy

Type:

Lineage: Afghani and Haze

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: An old Vancouver Island strain that originates from Afghani and Haze seed lines, recognized by the medical community for its pain relief without the drowsiness. Wonderful fragrance with an earthy flavor and long lasting high. The Cotton Candy will produce one ounce of dense bud per gallon of soil/root mass. The Cotton Candy has deep green leaves with a bushy growth structure that makes it almost as wide as it is tall. Known for its astringent qualities, the Cotton Candy has an extreme drying effect and it is recommended a glass of water or juice should be at hand while medicating.

Crown Royal

Type:

Lineage: Mikado X Hawaiian

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Indica sativa hybrid. Crown Royal tastes and smokes like a

Sativa but looks and grows like an Indica. The color and calyx size is like the Mikado, but stretches like the Hawaiian. The tops come to a flat crown covered with THC. Combining the 12 wk Hawaiian Sativa with the 6 wk Mikado produces one of the most unique and distinctive strains available. Patients report that this strain is effective for pain relief with little or no energy loss, speeding up recovery time after exercise or illness. Eat well, exercise well and smoke well.

Hawaiian Sativa

Type: 100% Sativa

Lineage: Hawaiian

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time: Nov.1st onwards

Breeder's Description: The Hawaiian is a pure sativa originating from the Big Island near the Mauna Kea volcano area. It's been bred and stabilized for more than 15 years on Vancouver Island. White with crystal, it has a very distinctive citrus odor and menthol flavor. Tall vigorous growth with few branches, cactus shape. Extreme stretching in the first two weeks of flowering with long thin hairs developing into long sticky buds, which thicken up after the sixth or seventh week. The lemon flavor intensifies when flushed for a long time (3 weeks) with straight water. Very energetic and up high, great to smoke during the day. Yield 8 oz full size. 3/4oz in a 2 gal pot. Height outdoors 8 feet.

Hawaiian Sativa X Big Bud

Type:

Lineage: Hawaiian Sativa X BC Big Bud

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: B.C. Big Bud is known for its size and potency, Hawaiian Sativa for its energetic and up high with increased alertness. Combining the two makes for a strain with soaring highs that produces well. Medical patients find this strain cushions the pain as well as the mind.

Hawaiian Sativa X Cotton Candy

Type:

Lineage: Hawaiian Sativa X Cotton Candy

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Known for its astringent qualities, Cotton Candy crossed with Hawaiian Sativa is a good producer of sugary dense buds. Good for IBS and other digestive disorders, medical patients who need to increase production should look at this strain.

Hawaiian Sativa X Celestial Temple Sativa

Type:

Lineage: Hawaiian Sativa X Celestial Temple Sativa

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Sativa crossed with a Sativa produces a super Sativa. If you're a Sativa fan this one's for you. With both size and potency this strain is loved by medical patients for its long lasting effects which means they have to medicate less often. With a citrus flavour, this strain is non-drowsy and will keep you alert.

Hawaiian Sativa X Island Sweet Skunk

Type:

Lineage: Hawaiian Sativa X Island Sweet Skunk

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: The Island Sweet Skunk crossed with Hawaiian Sativa produces an interesting nine week hybrid that is both large and potent. Medical patients appreciate the alertness with strong pain relieving qualities and nausea reducing effect. Tall vigorous growth with classic cactus shape, great for sea of green or tall confined spaces.

Island Sweet Skunk

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: The Island Sweet Skunk (ISS) has been grown on Vancouver Island in BC for many years as a stabilized Sativa-Skunk cross. The ISS has sugary fat buds with long, thick hairs that turn golden orange after the 6th week. Tall vigorous growth with a dramatic increase in bud density for the last 3 weeks of its 8 week flower cycle. This strain has been tested at 19.6% THC when finished, making it a major favorite amongst the medical community, as it takes less to properly medicate. Admired for its strong Sativa like high, the ISS has a very unique taste and odour that stands out from any other strain we've ever come across. Typically finishing outdoor by late October, ISS is one of the main strains that gives BC a reputation as being a leader in the breeding of world class medical marijuana. For size & strength, ISS gives the best bang for the buck.

Island Sweet Skunk X BC Kush

Type:

Lineage: Island Sweet Skunk X BC Kush

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: Tested at 19.6%, the Island Sweet Skunk adds strength and potency to this already wonderful strain. Kush is known world-wide for its flavour and size, combining the most desirable traits gives this strain a definite thumbs up from medical patients. Known for its chronic pain relief, the ISS+Kush is easy to clone, cultivate and trim making it an easy choice for medical patients who wish to spend less time growing and more time living. The ISS+Kush has a tendency to break branches from oversized buds that finish dense with very large calyx covered in crystal. Typically thirsty, this strain does better in a little larger container or hydroponics for less maintenance. Live life to the fullest, get the full effect with ISS+Kush.

Island Sweet Skunk X BC Skunk

Type:

Lineage: Island Sweet Skunk X BC Skunk

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: If you like Skunk you'll love these Skunk genetics. Island Sweet Skunk gives this cross extreme vigor and Sweet Skunk flavour while the BC Skunk gives it density and size. This one is a real branch breaker and needs to be planted with bamboo poles. She likes lots of food and she's easy to clone.

Island Sweet Skunk X Celestial Temple Sativa

Type:

Lineage: Island Sweet Skunk X Celestial Temple Sativa

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Because of the extreme vigor of both the Island Sweet Skunk and the Celestial Temple Sativa this cross literally explodes in its growth and flower cycle. With soil, use a large container and trigger early to avoid a massive bush and in hydro, allow for extra root mass. Produces long, sticky buds high in terpenoids giving it a lemony citrus smell and flavour. Non-drowsy alert effect that's long lasting makes this strain great for a daytime medication.

Island Sweet Skunk X Jamaican

Type:

Lineage: Island Sweet Skunk X Jamaican

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: Two great strains, one incredible cross. In two words, size and strength. Excellent for chronic pain relief and great for meeting your quota. Patients find these massive dark seeds easy to germinate and report clones are vigorous and quick to root, doing the best at a Ph of 6.3. With a classic growth pattern this cross produces at least one ounce per gallon of soil. Blending the best of the Islands, take a vacation in growing nirvana today.

Island Sweet Skunk X Purple Shaman

Type:

Lineage: Island Sweet Skunk X Purple Shaman

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: Nicknamed "Purple Skunk" because the silver crystal is such an incredible contrast against the bright purple buds. Known for its cactus style growth pattern, patients prefer the Purple Skunk for its high density planting in a minimal amount of floor space. (Sea Of Green) This is an astringent strain with a mild appetite suppressive effect. Set sail on a purple sea of crystal pleasure.

Jamaican

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: The Jamaican originates from the island of Jamaica, and is a perfect example of long term breeding and the necessity of preserving years of work. One of the most beautiful crown and cola we've ever seen, the Jamaican will finish in 8 weeks with thick solid buds absolutely covered in crystal on every possible surface. Easy to smoke and easy to cultivate makes the Jamaican one of the most popular strains in the medical community. A great consistent workhorse, durable and not overly finicky to grow. Fruity flavour with earthy undertones, the Jamaican is quick to trim but slow to dry, due to the extreme size of the buds. Best when quick dried and slow cured for the real connoisseur. The true taste of Jamaica without leaving the house, stay home and visit paradise.

Mikado

Type:

Lineage:

Indoor Harvest Time: 45 Days

Outdoor Harvest Time:

Breeder's Description: Predominantly Indica. The Mikado is a quick maturing, large-yielding strain. With a long jagged single leaf pattern. Under 18 hours of light, the stems and leaves are coated with resin. The female plants show hairs making sexing easy. Liked for its long-lasting high, Mikado can be harvested 45

days after flowering is started. Perfect for a sea of green.

Mikush

Type:

Lineage: Mikado X BC Kush

Indoor Harvest Time: 7 Weeks

Outdoor Harvest Time:

Breeder's Description: If marijuana is food this strain is candy, caramel to be exact. Blended for flavor and size, the Mikush (Mikado x Kush) will mature with jumbo sized buds that more melt than burn when smoked. Recommended by medical patients as effective against asthma and other similar breathing ailments. With this strain you can have your candy and smoke it to.

Purple Shaman

Type:

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: The Purple Shaman was originally bred in Arizona, for which we attribute its light loving characteristics and cactus style growth pattern. The Purple Shaman produces thick hard buds that glisten with crystals and turn a deep shade of purple in the last 2 weeks of flowering. Proper drying and curing enhances its rich early flavour with flowery overtones. Non-drowsy, alert high makes this strain a particular favorite amongst the medical community. Many patients have commented on its caffeine like feeling without the coffee or tea. The Purple Shaman also has an extreme astringent quality giving it optical aspects and appetite suppression. For its motivating high, the Shaman gets 2 purple thumbs up!

UBC Chemo

Type:

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Very strong with a hashy flavour, UBC Chemo was developed in the 1970's for cancer patients undergoing chemotherapy. Exhibiting characteristics of being a polyploid, woody stock and odd shaped leaves give the UBC Chemo a bonsai-like appearance. Recognized amongst

the medical community as the best strain available for chronic pain and nausea.

The Flying Dutchmen

Afghanica (Kabul Baba)

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 56 Days

Outdoor Harvest Time: October

Breeder's Description: Previously called Kabul Baba. Like a good father, Afghanica protects his real Afghani values. Expect a huge yield in only 8 weeks; the buds will be heavy with resin and give a strong physical stoning.

Artic Sun

Type: 60% Sativa 40% Indica

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: October

Breeder's Description: A marriage of old and new world genetics. Mostly Sativa with long, dense and crystal laden buds. High yielding and extremely potent. The high is both physical and cerebral in nature with pungent smell and taste for medical applications.

Aurora B

Type: 50% Sativa 50% Indica

Lineage: Northern Lights X Skunk

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Middle of October

Breeder's Description: Aurora B. is a cross between a carefully selected Northern Lights with our sweet Skunk father, a vigorous plant with heavy resinous buds. This strain has the best attributes from both its parents. Aurora B. grows into a medium size plant similar to Skunk#1, and has a sweet and fruity taste with a hashy after bite. Very high yields of quality product and a fast maturation time make this cross an ideal cash cropper both indoors and out.

Just sit back and enjoy the lights.

California Sunrise

Type: 60% Sativa 40% Indica

Lineage:

Indoor Harvest Time: 49-63 Days

Outdoor Harvest Time: September/October

Breeder's Description: Experience the golden glow of this F1 hybrid. Sweet and sour smell and a very strong up high with only 7 to 9 weeks of flowering! Yields and timing for the commercial grower.

Dutchmen's Royal Orange

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 9-11 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: This crossing was made with only quality in mind. The best selected from 10,000 happened to take a little longer to mature but worth the wait. This mostly Indica variety truly comes from royal stock. With a candy store smell and taste and a potent physical high. Perfect for lazy daze in the sun.

Early Durban

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Early October

Breeder's Description: As comfortable outdoors in most temperate regions as indoors, Early Durban is a tough plant that will reward the grower with high yields quickly, mostly Sativa in nature with a cerebral/physical effect and an Aniseed taste.

Fuma Con Dios

Type: 75% Sativa 25% Indica

Lineage: Original Haze X Skunk #1

Indoor Harvest Time: 9-12 Weeks

Outdoor Harvest Time: October/November

Breeder's Description: Enjoy the Fruit of the Gods.

Pure Haze smell, pure Haze taste, pure Haze effect. The Skunk father keeps the height down and the maturation time to within 12 weeks. He also pumps up the

yields to a respectable 300 grams per square meter. This powerful Haze comes highly recommended for impatient Haze lovers. Only one generation removed from the original Haze of the 1970's.

Haley's Comet

Type: 60% Sativa 40% Indica

Lineage: Early Californian X Skunk #1

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: September

Breeder's Description: An early Californian variety crossed with the Skunk #1, very homogenous fast maturing variety, suitable to grow outdoor in many temperate regions. A large percentage of the plants trigger into flower at the slightest reduction of photoperiod. Haley's Comet has a sweet citrus taste and smell with a well balanced physical/cerebral high. High yielding and easy to grow.

Haze Mist

Type: Mostly Sativa

Lineage: South Indian Sativa X Original Haze

Indoor Harvest Time: 8-14 Weeks

Outdoor Harvest Time: November

Breeder's Description: The balance between the potency and sweetness of the Kerala with the spiciness and soaring cerebral high of the Original Haze and perfectly expresses in this almost pure Sativa Cross. For patient Haze lovers only, a very special cross that will reward the growers with a product that is unsurpassed in recent history. Good yield for an almost pure Sativa. South Indian is one of the main building blocks that was used to make the Original Haze back in the 70's.

Kerala Krush

Type: Mostly Sativa

Lineage: South Indian Sativa X Skunk #1

Indoor Harvest Time: 9-11 Weeks

Outdoor Harvest Time: An extremely vigorous Sativa crossing of the highest caliber, a medium tall plant with good yields for a Sativa. The Skunk father boosts fast maturation without interfering with the high or taste of the pure South Indian Sativa. Very smooth, complex taste and smell with a very potent, clear cerebral high.

Mixed Sativa Divas

Type: Mostly Sativa

Indoor Harvest Time: 9-12 Weeks

Breeder's Description: Many different varieties of mothers, a good gene mix for selections. A delicious selection from the Flying Dutchmen. All the quality you have come to expect from us but in a mixed bag.

Original Haze

Type: 100% Sativa

Lineage: Haze

Indoor Harvest Time: 12-16 Weeks

Outdoor Harvest Time:

Breeder's Description: We have worked with this variety in Holland for almost 20 years now. It is the base for all the Haze you can find here in Holland. Since being stabilized in the late 70's The Original Haze has never been hybridized. Perfect for breeding projects due to it's pure breeding status. For commercial growers this strain is not recommended due to it's size and long maturation time. Very potent with an energetic cerebral high.

Pineapple Punch

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: End of October

Breeder's Description: A specially selected Real Mc Coy crossed back to a Skunk#1 daddy, to offer the chance for wider genetic diversity for those who love the Hawaiian. A little more chunky and Skunky than the Real McCoy, with a distinctive pineapple taste and smell. Very cerebral in effect. A great strain to cross with the Real McCoy and/or other extreme Sativa types.

Pot of Gold

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: October

Breeder's Description: A money maker, honey shaker, A true resin bomb! Compact plants that produce massive yields, also one of the most resinous strains in our selection. Pot Of Gold is one of the flagships of the Flying

Dutchmen seed company. With a refined sweet Hashish taste and an extremely potent physical effect this strain will leave you stuck to your seat for hours. Good for many medical applications.

The Pure

Type: 75% Sativa 25% Indica

Lineage: Skunk #1

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: October

Breeder's Description: The one and only Original Skunk # 1. Large yields can be expected from this variety, The Pure is extremely homogenous, and is perfectly adapted for all growing methods. Whether she is being grown indoors, in a greenhouse or in the great outdoors, the Pure is a strain that expresses the best of both it's Sativa and Indica heritage

Swazi Safari

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 9-11 Weeks

Outdoor Harvest Time: October/November

Breeder's Description: A perfectly balanced Sativa cross, a slender plant that matures to carry sweet heavy buds. The taste is similar to Original Haze but a little sweeter like good hashish. With fairly good yields and a crystal clear, energizing high, this cross is perfect for adding clarity to your cosmic thoughts.

Thai-tanic

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 9-12 Weeks

Outdoor Harvest Time: November

Breeder's Description: Don't panic, this one will only take you up and up and up! A very compact Sativa variety, classic chocolate Thai smell and taste. The Skunk father dominates only in fast maturation, high yields and general vigor. A heavy crystal producer that is extremely potent with a trippy cerebral high.

The Real McCoy

Type: 60% Sativa 40% Indica

Lineage:

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time: November

Breeder's Description: A very special cross for the true connoisseur, a wonderfully sweet and spicy bouquet and taste that can only be described as smoking a tropical salad bar. Tingly on the tongue, soft on the throat and high in the brain, The Real McCoy reaches the parts other weed can not reach. Grown properly yields can exceed 300 grams per square meter.

Titan's Haze (Fuma Con Diablos)

Type: Mostly Sativa

Lineage: Haze X Skunk #1

Indoor Harvest Time: 9-12 Weeks

Outdoor Harvest Time:

Breeder's Description: Pure Haze smell, pure Haze effect. The Skunk father keeps the height down and the maturation time to within 12 weeks. He also plumps up the yields to a respectable 300 grams per square meter. This powerful Haze comes highly recommended for impatient Haze lovers. Only one generation removed from the original Haze of the 1970's.

Green House Seed Company

Arjan's Haze #1

Type:

Lineage:

Indoor Harvest Time: 11 Weeks

Outdoor Harvest Time: Mid. Oct.

Breeder's Description: 1st place High Times Cannabis Cup 2004 People's Cup. This Strain has an uplifting high, strong and long lasting. Arjan's Haze #1 has a thc content up to 23%. A must for all connoisseurs and breeders, it is a very special Indoor plant.

Arjan's Haze #2**Type:****Lineage:** Neville's Haze, Super Silver Haze and Laos**Indoor Harvest Time:** 10-11 Weeks**Outdoor Harvest Time:** End of Sept.**Breeder's Description:****Arjan's Haze #3****Type:****Lineage:** Haze and Laos**Indoor Harvest Time:** 10-11 Weeks**Outdoor Harvest Time:** End of Oct.**Breeder's Description:** A tall plant with long branches, performs extremely good both indoor and outdoor.**El Nino****Type:****Lineage:** Haze/Super Skunk X White Widow**Indoor Harvest Time:** 8-9 Weeks**Outdoor Harvest Time:** End of Sept.**Breeder's Description:** 1st prize Bio HTTC 1998.

Like its name suggests, a storm for the senses.

Great White Shark**Type:** Mostly Indica**Lineage:** White Widow X Skunk #1**Indoor Harvest Time:** 50 Days**Outdoor Harvest Time:** End of Sept.**Breeder's Description:** 2nd place Bio HTCC 1997 (note: also 1st prize under the name Peace maker). With a thc level of 14.0% it's a Seductive stoned highness that has the strength of Jaws. Great White Shark ... It is almighty yet smooth, mystical yet adventurous. A bit of an outlaw, the Shark commands respect and gets it. Usually for the wrong reason. See if you can figure it out.

Hawaiian Snow

Type:

Lineage: Hawaiian X Laos

Indoor Harvest Time: 12-13 Weeks

Outdoor Harvest Time: Beginning of Nov.

Breeder's Description: Voted at the Cannabis Cup as the best quality cannabis made in 2003 in Holland. A true must for all growers.

Himalaya Gold

Type:

Lineage: Nepalese and North Indian

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: End of Sept.

Breeder's Description: Has won many harvest festivals and private awards. Strength: A very creative high! Good for inspiration, especially recommended for arts & crafts. Himalaya Gold ... At the foot of a mountain, we all seem insignificant. But every worthwhile journey begins with one step. This strain has a thc level of 15.0%.

Neville's Haze

Type: Mostly Sativa

Lineage: NL #5/Haze X Haze

Indoor Harvest Time: 12-14 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: 1st place HTCC '98. Strength: The most potent variety (thc level of 21%) of its kind on or off the market. Not recommended for inexperienced smokers - too trippy - to profound. Note: Indoors, should be started under 12 hours of light; Outdoors, should be grown in the Tropics and started just before the onset of Autumn. Not for the novice smoker or grower. Neville's Haze ... 3 quarters closer to heaven.

Super Silver Haze

Type:

Lineage: NL#5/Haze X Skunk#1/Haze

Indoor Harvest Time: 11 Weeks

Outdoor Harvest Time: Beginning of Oct.

Breeder's Description: An overpowering combination of Indica + Sativa highs. It leaves you gasping for reality. Note: This complex hybrid is the cutting edge in

practical Haze hybrids designed to astound both the grower and smoker alike. Highly recommended with a thc level of 18.0%.

Super Silver Haze ... You can't see the forest, for the Haze.

White Rhino

Type:

Lineage: White Widow X Afghani

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Mid Oct.

Breeder's Description: 2nd place Bio HTCC 96. Dedicated to medical marijuana. Strength: Medicinal, too strong for most people with a THC level of 11.0%. White Rhino ... Dedicated to the research of Medical Marijuana and developed for aiding the sick and terminally ill. Just as the name implies, this is a Species that has been saved from extinction to come back and help us understand.

White Widow

Type:

Lineage: Brazilian Sativa X South Indian

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: By mid Oct.

Breeder's Description: 1st place Bio HTCCup 95. Unique and serious is the first experience, and as the heaviness builds on the top of your cheeks, you realize - this is it. White Widow ... She is like the innocent vestial virgin that history always tells us about. If we could illustrate religion in a plant, then White Widow is a true "Mother Theresa". With a thc level of 12.0%.

Herbaria

Afghan Mango

Type: 100% Indica

Lineage: Afghani Landrace

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: Middle of October

Breeder's Description:

Bushmans

Type: 100% Sativa

Lineage: South African Landrace

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time: Middle to end of September

Breeder's Description:

Cloud #7

Type: 60% Sativa 40% Indica

Lineage: South African Sativa X Afghani

Indoor Harvest Time: 60-65 Days

Outdoor Harvest Time: Middle of October

Breeder's Description:

Shirin Gol

Type: 100% Indica

Lineage: Tadschikistan Landrace

Indoor Harvest Time: 55 Days

Outdoor Harvest Time: End of September

Breeder's Description:

Shirin Mango

Type: 100% Indica

Lineage: Afghan Mango X Shirin Gol

Indoor Harvest Time: 60 Days

Outdoor Harvest Time: Middle of October

Breeder's Description:

Shiva's Joy

Type: 100% Indica

Lineage: Nepalese Landrace

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time: End of September

Breeder's Description:

Sticky Sista

Type: 50% Sativa 50% Indica

Lineage: Afghan Mango X Bushmans

Indoor Harvest Time: 50 Days

Outdoor Harvest Time: End of September

Breeder's Description:

Legends

Big Funk

Type:

Lineage: Skunk X Bigbud

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Early Oct

Breeder's Description: Legends Big Funk is a good candidate for commercial production. The SkunkxBigBud mother came as a clone from California a few years ago. More Skunk than BigBud, this plant is frosty, and quite sweet. It was a favourite in the 2000 test field, and did well in the greenhouses, 2001. A smooth selection, it is not overly tarry, or harsh, in the same earth that others were. High yielding, but of a quality acceptable to all. The seeds resulting from this cross will not be stable, but all possible recombinations of this stock will result in fine specimens to mother great crops. The large, firm buds that come off these plants are susceptible to mold, but much less than other plants in the same weight class. I am sure this release will achieve the same level of satisfaction among growers that enjoy the Shishkaberry.

Highend

Type:

Lineage: René X DJ Short Blueberry

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Sept-Oct

Breeder's Description: Ahhhhh René, Where to truly begin with such a strain. Here in Vancouver British Columbia, is where I was to first come across this strain. A good friend at the time was growing large quantities of it, and was generous enough to give me his trim. The hash that was extracted from this trim was far superior to anything that was filling my bowl. We were all of course, just learning about the wonders of water extracted hashish, i.e. iceolator, bubblehash, etc. So the timing was perfect. The strain it was said, came from

Montreal, and was named after the gentlemen who either bred, or acquired it. The genetics were said to be a Himalayan sativa crossed with an extremely pungent Skunk #1 male. Now for me, I cannot guarantee that lineage at all, as it was a story. What I can say about René, is that it holds that magical property I like to call THE FUNK. I've seen it in the Dank Ass Bitch(aka DAB), as well in the Cheese(that's all the rage in the UK right now), and the Sour Diesel. I'm not saying these strains tasted alike at all, but it had this funk within its profile. To me, this makes a strain extra special. The melt factor on the René was, from the first day, jaw opening. Most of the people I was turning onto this René hash had never seen this type of quality. When posted on sites like Overgrow and Cannabis World, people believed it was a hoax. My excitement to be writing this is overwhelming, as I have smoked nothing but René bubblehash for over two years. This was the first two years I was in business with my bubblebag company , and those pictures of René bubblehash were integral in the timing of this all taking off. It has been almost five years now since we began this long strange trip, and I am very happy to be announcing here at Legends that the good old boys have acquired the original René, which is really what I am here to authenticate. As I am certain in the next few years you will be seeing a lot of Rene cross's as well as perhaps a pure René, coming out in seed form. However , if it is not from Legends Seeds one should, in the least proceed with caution. The first strains the boys are releasing with René genes involved, are some wonderful cross's with DJ Shorts Blueberry male(the one that was used for his latest line). I Look forward to bubbling up some of the material from these seeds in the near future, and I'm certain I will be giving a full melt clear dome certification on top of the authenticity of the René genes that the good people at Legends Seeds have chosen to use. Give thanks to those that do this good work, in order to put the rest of you in a position where you can simply order. Rene is without a doubt one of my favourite ganja strains, and definitely my all time favourite hash making strain. Full melt, oh yeah all the way! !

- Bubble Man

Johnny Blaze

Type:

Lineage: Neville's Haze X DJ Short Blueberry

Indoor Harvest Time: 9-11 Weeks

Outdoor Harvest Time:

Breeder's Description: An Original "Neville's Haze" female crossed with a slightly sativa-leaning Blueberry male. The "Haze" has a green-citrus boquette

with borderline woody undertones, while the Blueberry male adds a sweet-fruity flavor. Due to the genetic difference between the "Neville's Haze" female and the "Blueberry" male (both considered a P1 generation in this cross) I anticipate a uniform f1 hybrid from the cross along with very healthy hybrid vigor (high yield potential). Also, the f2's (and beyond) crossed from these f1's will probably prove very diverse. A party just waiting to happen!

Legend's Ultimate Indica

Type: Mostly Indica

Lineage: Ortega X 2nd Sweet Tooth BX2

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Late Sept.

Breeder's Description: The "LegendsUltimate Indica" is a combination of our two most favorite indica's. This F1 hybrid was mothered by a previously unreleased Ortega plant from California. The Ortega's heavy indica traits shone through with its' tight buds and extremely stoney finish. The father, a second backcross Sweet Tooth from Spice of Life Seeds, adds the sweet and pungent flavor Breeder Steve strains are know for. She is a heavy yielder that won't disappoint.

Moroccan

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: Mid-Aug (35 degrees N)

Breeder's Description: Hefchouen 2002 Harvest Seeds - These seeds are authentic Moroccan field stock which may or may not be of any use to growers elsewhere. They will not have the potency of today's most developed cannabis, but they are indeed a curiosity to cannabis lovers, as most of the cannabis resin smoked in Europe is sieved from these plants. They may be of use in the creation of new hybrids for hardy outdoor stock. Worthy of interest, for interest's sake.

Timebomb

Type:

Lineage: Texeda Timewarp X DJ Short Blueberry

Indoor Harvest Time:

Outdoor Harvest Time: Mid to late Sept

Breeder's Description: The Texeda Timewarp is a infamous West Coast lady. Every fall the West Coast is blessed with this spicy outdoor monster that has been cultivated for over 20 years. The particular clone that was used in this cross is one that an old bushman has been using for 15+ years. She will easily take over any garden as she has an explosive growth rate that makes her more of a hedge than a plant. We decided to hit her with the DJ Short selected Blueberry male in order to shorten her flowering time down, so that it might be possible to bring in earlier than mid October. Expect a lot of variation-keep in mind the shorter squat selections might be the one to look for! These are strictly for outdoor, as the buds on this girl need a lot of light to tighten up. These are untested, so you let us know what you think!

So.Cal.Special

Type:

Lineage: Garlic Bud X Sweet Skunk

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: These seeds will grow into 18' Jell-O trees in the desert given adequate water. Pink pistils and lime green buds. Sweet, yet tangy.

Mr. Nice

Black Widow

Type: Indica/Sativa

Lineage Brazilian Sativa X South Indian

Indoor Harvest Time: 56-65 Days

Outdoor Harvest Time: September/October

Breeder's Description: A most infamous strain that since 1994 has won a number of awards, including the High Times Cannabis Cup in 1995, and has acquired acclaim from most corners of the globe - rightly so. It has a pedigree of parentage that combines a Brazilian Sativa with a South Indian hybrid. Basically, it is White Widow changing its colors like its company. It will seem evident to the cultivator that this species needs slightly more attention to achieve the expected results. Do not forget the necessary love and attention in order to get the best results. For indoor methods the grower will find that 10 weeks of flowering will be necessary to realize the immense resin production. Expected yield of 350 to 450 grams per square meter. In the northern hemisphere expect harvest around

September/October, having planted as late as June. However, there is a chance that rain could reduce the expected yield. Be Warned. This is the original true blue champion that began a whole new wave of breeds before it consumed its partners.

Critical Mass

Type: Mostly Indica

Lineage: Afghani X Skunk#1

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time: September for northern hemisphere, March for southern

Breeder's Description: A reworked excellent version of an old breed once known as Big Bud. is an absolute must for the cultivator who demands a high yield with an equally high stone. It is the heaviest plant currently in production for commercial farmers and outdoor crops and resembles the male genital protrusion of a giant donkey. Due to its heavy flower construction it can be susceptible to mold if the growing area is too humid. So be warned, and harvest on time. It has a genetic pedigree originating from a particularly heavy Afghani combined with the original Skunk#1. An expected yield indoors would be 650-750 grams per square meter within 50-55 days, possibly more for the experienced cultivators. If cultivated outdoors, expect harvest in September for the northern hemisphere and by March in the southern hemisphere.

Devil

Type: Mostly Indica

Lineage: Afghani x Afghani/Skunk

Indoor Harvest Time: 48-50 Days

Outdoor Harvest Time: October for northern hemisphere, June/July for southern

Breeder's Description: The definitive plant for those interested in outdoors/greenhouses. Due to its Afghani pedigree, taste, reddish aura, and magical mind journey tendencies, this plant provides quite a wonderful therapy. No one can be unhappy possessing this nice devil (and a righteous one at that). It has a genetic make-up of Afghan x Afghan/Skunk and shows initial slow growth until it has an established root ball. Then watch out, brothers and sisters! Expect to finish this plant in the Northern hemisphere by October and in the Southern hemisphere by June/July. Indoors, 8-10 weeks with a yield expected of at least 550-600 grams per square meter. Definitely recommended for first time

growers.

Dreamtime

Type: Indoor mixed varieties

Breeder's Description: A selection of mixed indoor varieties of excellent parentage including Skunk, NL, Haze, and Afghan. Highly recommended for the first time grower or those that search for an economic solution to their problems. Guaranteed to turn the consumer on and personally recommended

Early Queen

Lineage: Early Pearl, Super Skunk and Early Girl

Indoor Harvest Time: 42-56 Days

Outdoor Harvest Time: September in northern hemisphere, March in southern

Breeder's Description: Since the beginning of the 1990's, this three way hybrid has earned acclaim in the cultivators' world. It is quick to finish both indoors and outdoors and is, therefore, perfect for cold climate countries in the northern hemisphere. The flowering cycle is expected to be between 6-8 weeks with indoor cultivation. Expect harvest time in the northern hemisphere as early as September and in the southern hemisphere by March. The yields will surprise the victims. The genetic composition of this breed stems from early Californian blends mixed with a touch of Mexican. So, Signor Cultivator, enjoy your Early Queen and her fruits like a happy farmer should Real early, real juicy, and the real thing.

G13 X Skunk#1

Type: Mostly Indica

Lineage: G13 X Skunk #1

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time:

Breeder's Description: This is probably one of the biggest mainstream cannabis media stars, due to the rather colorful mythology that surrounds the stories of its origin.

Before the female clone of G13 lost its vigour for life, we at MNS combined it with several other stable hybrids to preserve the genetic pool and enable growers to explore and discover .

The origins of this plant seem to be in line with an Afghani ancestry. Combining that with the MNS skunk line make the F1 seeds excellent value, particularly

regarding the more medicinally valued plants (used for many medical ailments including pain management, MS, arthritis and depression).

The yields that a grower of this strain should expect for indoor cultivation should be between at least 500-650 grams per square meter. It depends upon the style of growing and the selection of the plant. Since it is predominantly indica, this plant does not stretch much and can be grown quite easily by beginning to advanced growers with good results. The flower cluster can be very dense, and as the plant draws closer to maturity, it should be monitored for mould if the humidity is moderate to high during the last weeks of the plants life.

We found that the majority of the plants are finished after 7 weeks flowering with a very small percentage taking a week to 10 days more. This plant would be fine to be used in a sea of green type cultivation and is equally impressive for both the indoor and outdoor growers.

The two distinctive features that the G13 plant brings with it are a serrated edged leaf trait and an unusually healthy (almost glossy) green in the growing plant. If looking to find a plant for grow that is used to the limelight, then this is the girl.

G13 X Widow

Type:

Lineage: G13 X Black Widow

Indoor Harvest Time: 7-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Over the past decade in the cannabis culture, there have been several new hybrids developed that took the cannabinoid levels to some significant heights in the growing plant. Since it is becoming the most sought after research topic world wide by numerous professionals in this area, this combination a most interesting and intriguing plant to work with.

The genetic makeup of this particular blend combines Afghan, South Indian and Brazilian in a single plant. The phenotypes range from an expression of a sativa with an indica type flower to a dense indica predominance. Selection is definitely something to spend a little time on to customize the plant to one's requirements.

In a normal indoor grow this plant can be grown for a week to 10 days before

being flowered. Expected flowering times range between 7-10 weeks (depending on the phenotype flowered). An expected yield of 400-550 grams per square meter is a rule of thumb, but it depends on how one grows/flowers and the selection of the seed.

This plant has the capacity to stretch a little, but nothing to get too concerned about with a normal height room. The distinctive features of this plant are the aroma, taste, and the effects once the product is ready. These all vary considerably depending upon the particular plant; however, if one finds strange aromas, one might well be surprised by the effects. It may not be for everyone but those looking for a holy grail type of plant for their gardens should give this hybrid a try. It can be very rewarding to find that 1 in a 1000.

La Nina

Type:

Lineage: Haze X Black Widow

Indoor Harvest Time: 56-70 Days

Outdoor Harvest Time: September for in northern hemisphere, April in southern

Breeder's Description: A family member that had previously been kept private for The Family. Strongly related to El Ni'Yo (Bio Cup 98 HTCC), La Ni'Ya manifests characteristics that are predictable, contrary to her name's implication. She has a genetic composition of Haze x White Widow, making her an inevitable candidate for a hot love story with her consumer. Expect her to bare her voluptuous resinous fruits within 8-10 weeks on a flowering stage. Indoors, an estimated yield per square meter would be 450-550 grams. In the northern hemisphere, expect harvest by September; in the southern hemisphere, by April.

Mango Haze

Type: 50% Sativa 50% Indica

Lineage: 25% NL5, 25% Skunk and 50% Haze

Indoor Harvest Time: 8-11 Weeks

Outdoor Harvest Time:

Breeder's Description: This strain is a parallel line to the Super Silver Haze, i.e. it has the same Haze father and the mother is a sister of the SSH.

Accordingly, the genetic makeup of this strain is 25% NL5, 25% Skunk and 50% Haze.

The expected flowering times depend very much on the selection of the mother but in general will vary from 8 to 11 weeks, so it is a practical 50% sativa for indoor growing. It is suggested that if the room does not have much height, go directly into 12/12 with a rooted clone or seed. This will still give a 1-1.5 meter plant.

Yields of this strain are expected to produce between 450-550 grams per square meter (based on using minimum of 600 watts lamps). Lower branches may be pruned during the grow or pre flower phase, so the Mango strain puts its energy into the cola flower clusters. This is a good way to manage this plant if growing more plants per square meter than normal is preferred. The resistance to moulds is a positive feature of this plant, both for indoor and outdoor growers. Mango is a very special plant if one is impressed by resin production, and the aroma is of fully ripe mangos. It is special plant affecting people's cerebral areas.

The plant's ancestors were HTCC winners of numerous awards, so its pedigree is outstanding. It has been in the making for some years now, but we at MNS feel it is as ready as it ever will be.

If only the serpent in the Garden of Eden had tempted Eve with a Mango Haze instead of a mere apple, the whole world would have understood so much more.

Mango X Widow

Medicine Man

Type: Mostly Indica

Lineage: Black Widow X Afghani

Indoor Harvest Time: 56-63 Days

Outdoor Harvest Time: October in northern hemisphere, May in southern

Breeder's Description: A proven medical marvel for those in need of high levels of the most active ingredient, THC. Almost toxic at times, so handle with care: don't abuse the medicine-man. It has won many awards since its introduction as the white rhino in the late 90's. An incredible strong genetic heritage stemming from a Brazilian sativa/South Indian hybrid combined with a prodigious-yield Afghani. It is a member of the White Widow family and a proven champion for the and terminally ill patients. Those who prefer indoors can expect an incredibly resinous and compact Indica appearance from this plant. It

has an expected flowering time of 56 to 60 days. Outdoor growers in the northern hemisphere can expect harvest around October and those in the southern hemisphere by May. The yield should be at least 600 grams a square meter

Master Kush X Skunk #1

Type: Mostly Indica

Lineage: Master Kush X Skunk #1

Indoor Harvest Time: 6-9 Weeks

Outdoor Harvest Time:

Breeder's Description: Both these plants have won multiple awards for their particular contribution to the cannabis culture over the last few decades. It is very reliable on all levels and an excellent blend of fine genetics. The origins of the parents stem from Afghan with smaller contributions arising from Thai and Mexican.

Usually, the flowering time will be in the faster range of 6 weeks, but one will find certain phenotypes that will finish in 8/9 weeks. Generally the longer they go until they reach maturity, the more sativa influence will be in the plant. These plants will carry the distinct flavour of the original MK, which won the 1994 HTCC. It is a special plant in aroma and flavour and quite an easy and versatile good yielding plant. It is certainly a good option for all levels of growers. It is suitable for indoor and outdoor cultivation with a good resistance to moulds.

The yields to expect from this blend will be between 500-650 grams per square meter, using a 600 watt minimum source for indoor cultivation. Outdoors, the maturing flowers will need to be supported well; otherwise, they have the tendency to over weigh their stem and break - usually a good sign for those who take the time.

Overall, this is an outstanding plant that can be farmed in all ways on all mediums and perform equally well. It has a particular smell, taste, and effect that make it a unique plant for almost any grower's garden.

Neville's Haze

Type: 75% Sativa 25% Indica

Lineage: NL#5/Haze X Haze

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Neville's Haze X Mango

Type: Mostly Sativa

Lineage: 12.5% skunk, 25% NL5, and 12.5%Haze A male, 50% Haze C Male

Indoor Harvest Time: 10-14 Weeks

Outdoor Harvest Time:

Breeder's Description: The combination of these two plants awakens the appetite for even the most moderate user/grower of sativa based hybrids. The genetics making up this complex hybrid combine the two Haze males utilized by MNS. This seed is basically comprised of 12.5% skunk, 25% NL5, and 12.5%Haze A male, 50% Haze C male.

The expected flowering time will vary considerably depending upon the chosen phenotype. Generally, it should be between 10-14 weeks with the possibility of slightly earlier if getting something towards the NL5 or Skunk side. Anything that goes beyond the 14 week marker in flowering is really not interesting as it becomes a difficult chore for a relatively low return.

This plant will need to grow extensively, so it is essential to 12/12 (possibly even 10/14) light to night ratio, to force the onset of flowering. It is recommended to ensure the night time is very dark, as this will help force the plant to flower without compromise.

It is very difficult to give an estimated yield here but one should be able to get an average of 450-500 grams per square meter. One might need to take the height of the growing area into consideration as this plant has the ability to grow for it. The aromas and taste of the finished product will be the most wonderful surprise for the growers and their hard work: it will be nothing less than superb. The effects will be cerebral and possibly a bit trippy so use the medicine well.

This seed can be grown both indoors and outdoors but will need space and it will be hard to imagine it as a sea of green plant due to its sativa roots. It has the

potential for a holy grail...can you find it?

Shark Shock

Type: Mostly Indica

Lineage: Brazilian Sativa/South Indian X Skunk#1

Indoor Harvest Time: 50-56 Days

Outdoor Harvest Time: September/October in northern hemisphere, March/April in southern

Breeder's Description: This is definitely the most successful breed of the late 90's (since its inauguration by Shantibaba as Great White Shark). It has equally famous genetic heritage and has been awarded a multitude of cannabis cups under the names of the Peacemaker and the Great White Shark. It's parents are well known as White Widow (a Brazilian sativa combined with a south Indian hybrid) and Skunk#1. It is a pleasure to watch this plant grow into a densely compacted white skunk with extreme aromas and equally pleasurable to use. Strictly tested, but only on humans. We never use our products on animals. Indoors, expect a 50-56 day flowering cycle and a yield of between 500-600 grams per square meter. Outdoors in the northern hemisphere, harvest in September to early October; and in the southern hemisphere, March to early April.

Shit

Type: Mostly Indica

Lineage: Afghani/Skunk#1 X Skunk#1

Indoor Harvest Time: 45 Days

Outdoor Harvest Time: September/October in northern hemisphere, end of April in southern

Breeder's Description: An absolute classic and original Skunk/Afghani that has won many awards. It is a sure-bet for first time cultivators of interior, exterior, or glasshouse grown plants. The yield will be extremely substantial, with expectations between 550-650 grams per square meter. The finishing time will be within 45 days of the flowering's first appearance on the plant. Expect harvest in late September to early October in the northern hemisphere and in the southern hemisphere by the end of April. A proven true breed since the 80's.

Spice

Type: Indica/Sativa

Lineage: Hawaiian Indica x Hawaiian Sativa

Indoor Harvest Time: 48-60 Days

Outdoor Harvest Time: October in northern hemisphere, May in southern

Breeder's Description: She is bubbling with rapid growth and well endowed ear as her name suggests. Her pedigree has blossomed out of the union of a Hawaiian indica x Hawaiian sativa and is a stable hybrid that no curry eater can live without. Don't knock our Nice Spice until you have grown her to maturity. She is definitely better than the one that left; we have created our own Nice Spice. Expect yields of around 480-600 g/m² for indoor growers, with tight nuggets. Expect an indoors harvest between 7-9 weeks, indoors. Outdoors in the northern hemisphere harvest by October, and in the southern hemisphere by May. Be warned of the kick that Spice gives, not to mention the mouth watering cascade of exotic fruit taste. Enjoy growing together.

Super Silver Haze

Type: 50% Sativa 50%Indica

Lineage: NL#5/Haze X Skunk#1/Haze

Indoor Harvest Time: 56-70 Days

Outdoor Harvest Time: Late October in northern hemisphere, May/June in southern

Breeder's Description: A champion of champions since winning its hat-trick at the 1997, 1998, and 1999 High Times Cannabis Cups and comprising the most commercial strains known to the uncivilized world: Skunk, NL and Haze. Such achievements confer an undoubtedly regal pedigree. It's an excellent breed for those who wish to possess the stash of stashes and leaves one gasping for reality. Expect harvest in 8-10 weeks with top yields (450-550g/m²) and heavy resin production. In the northern hemisphere completion date would be expected by late October; in the southern hemisphere, late May/June. This complex hybrid is in the cutting edge in practical Haze hybrids, designed to astound the grower and consumer alike. Recommendation is unnecessary as most people can't see the Haze for their daze.

Walkabout

Type: Outdoor mixed varieties

Breeder's Description: A selection of mixed outdoor varieties with all genetics of supreme sources including Thai, Haze, India, early Skunks, Mexicans, and New Guinea. Highly recommended for those in need of walkabout. A guaranteed recipe for outdoors or greenhouse cultivators, with its range of early finishes and a few late flowers.

Paradise Seeds

Amsterdam Flame

Type:

Lineage:

Indoor Harvest Time: 50-60 Days

Outdoor Harvest Time: 3rd week of October

Breeder's Description: This outstanding plant of excellent quality with her sparkling looks is selected for the lovers of cannabis best. Her wonderful high and soft subtle taste carries us like a summer breeze, telling tales of mysteries. A plant worthy for the 'canna'seur.

Belladonna

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: Middle of October

Breeder's Description: This mostly Skunk type is a real beauty, with very tight, compact orange buds. This beauty absorbs the light of the world in 60 days. During this blossoming process she develops to maturity. Her tempting signals are of the kind you want to experience, but be warned, her tripping high is of a hallucinogenic nature.

Durga Mata

Type:

Lineage:

Indoor Harvest Time: 50-55 Days

Outdoor Harvest Time: Beginning of October

Breeder's Description: Selected for the resin (THC) content. This gorgeous plant is mind -blowing, has a unique aroma and herbal spicy flavor, and is easy

to grow. You should get to know her.

Dutch Dragon

Type:

Lineage:

Indoor Harvest Time: 60-65 Days

Outdoor Harvest Time: Middle of October

Breeder's Description: High yields and superb quality on long sticky colas makes this Dragon of Dutch descent a spectacular plant for indoor and outdoor growing. Due to the combination of her sweet taste and strong potency, she is the favorite to many regular smokers. She can become a tall plant with hundreds of buds. In the tops the flowers are growing densely and abundantly.

Magic Bud

Type:

Lineage:

Indoor Harvest Time: 50 Days

Outdoor Harvest Time:

Breeder's Description: Magic Bud is the finest blend of Indica and Sativa, which makes her into an easy to grow bud bomb. The floral and aromatic taste makes her smooth to smoke with a body relaxing effect, combined with a pleasant Sativa cerebral high. This plant of fine stature produces beautiful nuggets in a relatively short time, approximately 50 days indoors. Many commercial growers would like to have this plant in their gardens, not only for its high yield and short flowering time, but also for her quality which is beyond many commercial strains.

Nebula

Type:

Lineage:

Indoor Harvest Time: 56-62 Days

Outdoor Harvest Time: Middle of October

Breeder's Description: Winner of the fourth place in the Hightimes Cannabis Cup 1999! Like the name suggests this plant is covered with twinkling shiny THC glands. Her fruity flavor and scent is a delight to even the most experienced smoker. She is bound to get you into the realm of space. Her buzz is typically transcendental and it is known she takes you far beyond your grasp. When you want to join the worlds of nebula, she is waiting to give you universal

depth. Nebula shows a strong reaction to increase of light, outdoors the more sun, the better!

Nebula

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Middle of September

Breeder's Description: This is a dense one! Dense both the formation of floral clusters and the 'feelgood' effect on the body and soul. Energetic and direct, even sometimes overwhelming with take off. Don't forget to breathe again! It's not the biggest of plants but definitely the most solid. So solid that the rain washes of her, no problems for her to be grown in wet climates, she couldn't care less! Fungus resistant!

She's standing pride smelling and tasting fruity in the strawberry/mint range. These hard nuggets are a pleasure to smoke.

Enjoy this colorful girl ...at a party, she rocks you all night long!

Sativa Spirit

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: Middle to end of October

Breeder's Description: Nice long and big-sized frosty buds!

Description: She is well adapted to indoor sea of green techniques and outdoors gives magnificent yields! It's a pleasure to smoke this delicious, delightful herb which tastes a bit like berries and red grapes. With its uplifting and energizing sativa high, it is great for going out on the town at night or spending an active day at the beach. In short, a joyful and exotic around variety that you will want to grow over and over again.

Definitely a keeper!

Sensi Star

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: Beginning of October

Breeder's Description: First price winner in the Highlife Cup 1999, bio indoors and first price winner in the Hightimes Cannabis Cup 1999! She produces powerful, compact buds, crowned with legendary amounts of resin. The dense, strong and characteristic aroma speaks for itself. She is one of world's finest cannabis strains, and has successfully become the new standard in growing.

Sheherazade

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time: Beginning of October

Breeder's Description: Due to her family heritage, Sheherazade has got the depth from the valleys of Hindu Kush, as well as the soaring highs from the far East. Most of all, the traits of this sultry princess is her heavy musk-like sweetness. Now available for you to enjoy, a "thousand and one night" long-lasting warm caress of breathtaking up high!

Sugar Babe

Type:

Lineage:

Indoor Harvest Time: 54-60 Days

Outdoor Harvest Time: Beginning of October

Breeder's Description: This variety is a true beauty. Powerful as an Indica plant can be with compact full buds powdered white as snow alike the Alp mountaintops where she was developed. Inherited from her partly Afghani background, she is well adapted to the outdoor. The smoke is very distinctive and fresh, a bit lemon like with some metal taste to it. Her energetic and uplifting effect makes you feel like doing fun things, such as skiing. Good yields indoors and outdoors, approximately 400 grams on compact sugar dipped, 30 cm long buds.

Sweet Purple

Type:

Lineage:

Indoor Harvest Time: 56-60 Days

Outdoor Harvest Time: Beginning of October

Breeder's Description: She is selected from Purple plants, crossed with an early, large yielding Dutch variety, and then, to sweeten her, crossed with a high quality plant with huge amounts of resin. Specifics: A very strong, rather tall plant with hues of purple and pink, that tastes like strawberries. She grows good indoors, and is also perfectly adapted to colder regions such as Holland for outdoor growing. Her early flowering means you can harvest fat colas before the "bad" weather starts.

Swiss Bliss

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: End of October to the beginning of November

Breeder's Description: A wonderful mostly Sativa variety, abundant in growth, that flavors a mix of tropical fruits. The branching pattern makes her ideal for pruning. This means you can put less plants per square meter as you would have in a sea of green setup, and still be able to harvest a terrific yield of very nice sticky buds on several branches, within approximately 9 weeks of flowering. When smoked you feel ecstatic and joyful, really high!!

Reeferman Seeds

Apple Pie

Type: 100% Sativa

Lineage: Acapulco Gold x Highland Nepalese

Indoor Harvest Time: 10-14 Weeks

Outdoor Harvest Time: Mid-Late Oct.

Breeder's Description: Acapulco Gold x Highland Nepalese. True American Weed. A landrace based 100% Sativa hybrid that will fuckin' amaze you. Tops in tokes, true reefer madness, like heroin in a joint except you don't barf. Old school sativa lovers need to try this. Big super vigorous sativas with big yields, great outdoors in southern climates. A real Texas ball buster.

Asia Girl

Type: 65% Sativa 35% Indica

Lineage: (Thai X Nepalese) X Reeferman's NL#5

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Thai X Nepalese X Thai X Nepalese X Reeferman's NL#5. Watch out, Asia Girl has come to town. Super Sativa Structure but well behaved with lateral branches. Thai dominant high with the added crystal of NL#5. She will rock you world amongst the breeders favorites.

Big Thunder

Type: 60% Sativa 40 % Indica

Lineage: Select Humboldt X Kodiak Gold

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: A cross of Kodiak Gold and a select Humboldt strain, Big Thunder lives up to it's name, huge plants with huge buds and huge yields of hugely stoney herb. The flowers have a unique rich yet grassy aroma that old schoolers will love. The finished buds are a lovely green and golden and form into greasy chunky spears. Some will have striking lavender hues. The high is very strong, the mother was measured at 19% THC, and mated to an equally strong Kodiak Gold male line. This one has a happy creative balanced high, leaning slightly towards sativa. Creeper weed. The high lasts long and can be felt as a warm tingle from head to toe with a strong influence on the frontal lobes.

Blue Nepalese

Type: 75% Sativa 25% Indica

Lineage: Blueberry Sativa and Mostly Nepalese Hybrid

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Late Sept - Early Oct.

Breeder's Description: A mostly Nepalese sativa hybrid with some Blueberry sativa in it's genes, this one finishes fast for a sativa with dry fruity, berry, lemony and bubblegum aromas. Our fastest blueberry hybrid outdoors. Strong uplifting and motivating euphoric sativa dominant buzz. Some plants will have interesting blue and purple hues with golden hairs. Makes a dominant cola with nice side branching.

Blue Thunder

Type: 60% Sativa 40 % Indica

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time:

Breeder's Description: A classic Prairiefire Seeds strain recreated, we've taken a trio of exceptional and super stable Kodiak Lavender F9 males and mated them with our wonderful Blueberry sativa pheno goddess to recreate an improved version of the original Blue Thunder. Excellent smoke, hard to keep around so you might want to hide some away for later. 60% Sativa, very potent meds with a pungent piney, grapey and blueberry aroma, the high will keep you coming back for more. Great anti-depressant weed, uplifting and stress relieving. Finishes with rock hard nugs. Easy trimming, A good number of plants have deep purple buds and deep wine colored stalks.

Blueberry Blast

Type: 50% Sativa 50% Indica

Lineage: Reeferman's NL#5 and Blueberry Indica

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Early Nov.

Breeder's Description: If quality and commercial yields are what you seek, then this F-1 hybrid of Reefermans NL#5 and Blueberry Indica will blast you into the great beyond. Careful parent selection have made this the rocket of Blueberry hybrids.

Blueberry Magic Feminized

Type: 50% Sativa 50% Indica

Lineage: Magic Carpet Ride X Blueberry Sativa

Indoor Harvest Time: 8-10 Weeks

Outdoor Harvest Time: Early Nov.

Breeder's Description: A select Headstash pheno of Magic Carpet Ride (Headstash Afghani X Cambodian) is crossed with the Blueberry Sativa to create some Blueberry Magic. Our sweetest blueberry flavored strain with interesting spicy and exotic woody aromas. Makes some egg sized ultra frosty nuggets. Good plant for SCROG. Some have interesting reddish purple hues.

Burmaberry

Type: 50% Sativa 50% Indica

Lineage: Spice of Life Shishkaberry #3 X Burmese

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: Wow! SOL's Shishkaberry #3 pollinated with a select Burmese Male, Shisk #3 is a hashmakers dream. Shisk#3 is a high yielder, but really lacked flavor and showed hermies. Reeferman Seeds obtained a carefully selected clone which is hard to find as not many seeds were sold. Huge yields, good in every style of garden, oozing with resin. Commercial potential.

Burmese (Pure)

Type: 100% Sativa

Lineage: Burmese Landrace

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Mid. Oct.

Breeder's Description: A highland cultivated landrace from Burma. True Breeding 100% Sativa with incredible exotic and sweet aromas, nice uplifting high. Anti-anxiety.

Burmese Delight

Type: 50% Sativa 50% Indica

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: This one is a gourmet treat, incredibly intoxicating aroma, smooth strong high and talk about flavor. Dipping with resin this will yield decently indoors in tables. Fantastic outdoor headies. Improved in 2005 for better mold resistance, better yields and better outdoor performance. Some individuals have lavender hued buds.

Butterscotch Hawaiian

Type: 20% Sativa 80% Indica

Lineage: Hawaiian and Butterscotch Afghan

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Mid Oct.

Breeder's Description: A cross of a Hawaiian with our special Butterscotch Afghan this is for those that like the big solid colas. Makes light green easy to

clip large frosty nuggets. Great rich butterscotch taste. Well suited to commercial production in tables. Awesome medicinal strain with strong pain relieving qualities and long lasting couchlock high.

Cambodian X Headstash X Burmese

Type:

Lineage: (Cambodian X Headstash) X Burmese

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: An ultra sweet smelling Cambodian x Headstash (Headstash pheno) female was pollinated by a an elite frosty Burmese father.

Cherry Bomb II

Type: 55% Sativa 45% Indica

Lineage:

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: We have obtained Cherry Bomb from several sources, the original being from California and most recently we obtained Cherry Bomb from Mr. Greengenes, and his 100% Sativa Cherry Bomb meets the predominantly indica Cherry Bomb from California to create the ultimate Cherry explosion like and orgasm in a rolling paper. Soaring high, sativa dominant buzz, full on Cherry Candy flavor and smell and a respectable yield make this cherry bomb the best ever. High yield.

The Crystal Ship

Type: 20% Sativa 80% Indica

Lineage: Kali Mist X Kodiak Gold

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Mid. Oct.

Breeder's Description: A cross of a super resinous Kali Mist indica pheno with our F8 Kodiak Gold father results in a bouquet of bubblegum, cotton candy and citrus aromas with mega crystal production. Single cola dominant, great for coliseums or sea of green. Low odor. Super bag appeal. Some with lavender hues. Decent high. Works outdoors too.

El Diablo (Pure)

Type: 75% Sativa 25% Indica

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: Mid Oct.

Breeder's Description: A smooth sativa smoke that tastes like grapefruit with orange undertones, we received this true breeding strain with very little background info, but we believe it to be from central Africa. Never the less we have grown to love this one, makes wonderful hash and oil, nice zippy and creative buzz, great daytime smoke.

Full Melt Madness

Type: 50% Sativa 50% Indica

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Mid October

Breeder's Description: A sweet and fruity Afghani hybrid that is easy to grow, easy to clone, resistant to pests and powdery and as the name suggests she makes some awesome bubble hash. Nice relaxing after dinner smoke. Good sea of green plant. Medium green buds with orange hairs.

G13 X Blueberry Sativa

Type: 40% Sativa 60% Indica

Lineage: G13 X Blueberry Sativa

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: November

Breeder's Description: A very unique blueberry hybrid, the G-13 was crossed with a Blueberry Sativa to increase the stretch and make a plant well suited for commercial production with connoisseur quality and a long lasting blissful thought provoking experience. Strong euphoric high will affect the most tempered smokers. Old school weed.

G13/Black Widow (Pure)

Type: 30% Sativa 70% Indica

Lineage: G13 and Black Widow

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: A compact G-13 x Black Widow indica selection

originally from Pacific now inbred to the F4 generation. Grapefruit diesel and spicy aromas make this weed a pleasure to smoke. Next to no stretch in flowering, Good for closets or SOG. Also good for breeding since it is an F4. Strong medicine with anti-anxiety qualities. Positive contemplative weed with a full body high.

G-SUS

Type: 15% Sativa 85% Indica

Lineage: G13 X Godbud

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Mid Oct.

Breeder's Description: G-13 x Godbud. You have to go through G-SUS to reach God. A match made in heaven with many redeeming qualities, G-SUS is squat and a skanky fairly easy to grow strain. Needs pruning on a daily basis when flowering. Big rock hard skunky greasy nuggets. a real couchlocker. Some have pink pistils.

G13 X Burmese

Type:

Lineage: Airborne G13 X Burmese

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Our G13 Airborne mother was hit with pollen from an elite Burmese father.

Great Garberville (Pure)

Type: 15% Sativa 85% Indica

Lineage: Thai, Afghani and Hawaiian

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Mid Oct.

Breeder's Description: An old IBL from Garberville CA, this one was originally a cross of old school Thai and Afghani/Hawaiian and has since been inbred to create a true breeding strain. Dry earthy hashy aromas, serious couchlock, great yield, strong plants. Classic old school herb. Solid nugs with great bag appeal.

Gypsy's Kiss

Type: 15% Sativa 85% Indica

Lineage: White Widow X Petrolia Headstash

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: First Lady queen mother of White Widow meets Petrolia Headstash from Northern California. Strong medicine, lime green frosty nuggets of pure joy. Medium sized plants, easy to grow and clone, AAA all the way.

Highland Afghani

Type: 100% Indica

Lineage: Two Highland Afghanis

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Early-Mid Sept.

Breeder's Description: An early and reliable F-1 hybrid of two highland Afghani cultivars. Makes solid hashy nuggets, some with purple colors. Great outdoor plant for northern, coastal and prairie climates.

Kali's Bliss

Type: 90% Sativa 10% Indica

Lineage: Reeferman Cambodian and Brother's Grimm C99

Indoor Harvest Time: 9-12 Weeks

Outdoor Harvest Time: November

Breeder's Description: For lovers of Kali Mist the Reeferman proudly presents Kali's Bliss an exceptional F-1 hybrid of Reeferman's Cambodian and Brother's Grimm C-99.

King's Kross

Type: 10% Sativa 90% Indica

Lineage: King X (King x Charles Kush)

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: November

Breeder's Description: (King x Charles Kush) x King, this is a backcross to a highly coveted Vancouver Island clone. Compact growth, classic piney kush aromas. Strong herb.

Kodiak Gold (Pure)

Type: 40% Sativa 60% Indica

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: This is the original KG from Kodiak Island, AK. KG is some strong and long-lasting herb that is proven medicine for many different conditions like hep-c and aids. 40% Sativa, makes some sparkly golden to lavender colored rock hard buds that are just rich in fragrance with pungent berry, grape, grassy and hashy aromas. High THC. Strong creeper effect.

Love Potion #1

Type: 70% Sativa 30% Indica

Lineage: (G13 X Santa Marta Colombian) X Santa Marta Colombian

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time: Late November

Breeder's Description: 2004 Cannabis Cup Winner - Best Sativa and Best Herb Overall Love Potion #1 is an outstanding hybrid of G-13 and Santa Marta Colombian Gold backcrossed with the original SMCG male. It's sweet and skunky piney lemony goodness that will blast you into the sativasphere soaring high clearly cutting through anything that was smoked before. Great SOG and SCROG plant.

Love Potion #1 X Nigerian

Type:

Lineage: Love Potion #1 X Nigerian

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: A select Love Potion #1 female was hit with pollen from a pure Nigerian male.

Lowland Afghani

Type: 100% Indica

Lineage: Two Lowland Afghanis

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Mid-Late Sept.

Breeder's Description: An F-1 hybrid of 2 lowland Afghani cultivars. Solid dependable outdoor, makes mid size plants with large nuggets. Low odor.

Sweet, fruity and slightly skunky. Good anti-anxiety herb.

NewBerry

Type: 15% Sativa 85% Indica

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Mid Oct.

Breeder's Description: NewBerry is a top secret creation from the Reeferman Seeds lab that is soon to be legendary. No details will be released on the parentage except that she is mostly indica with just a hint of inspiring sativa. NewBerry is a vigorous F1 with excellent indoor growth characteristics such as high yield, extreme frost production, tight buds and low stretch when put into flowering. The strong berry aromas of Newberry will tickle the most fickle of bud connoisseurs. The high is strong and immediate, beyond what most would expect, a thin joint can leave up to 7 chronics fully satisfied. Warning: NewBerry can be addictive.

Nigerian Nightmare

Type: 50% Sativa 50% Indica

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Early-Mid Sept.

Breeder's Description: Awesome early outdoor plants with super frost production, nice chunky nuggets with some strong dry skunky aromas with mango carrot and mandarin orange undertones. A crowd pleaser with a happy euphoric high. Good mold resistance. Compact plants, very photoperiod sensitive. If vegged under 18 or 24 hours from seed or clone they can be put outside and will start flowering quickly.. We recommend veg in at least 1 gallon pots to about 3 feet or more tall if starting indoors. Multiple crop potential outdoors in the summer. Great smaller plant for the balcony.

Nigerian X Burmese

Type:

Lineage: Nigerian X Burmese

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: A fast flowering pure Nigerian female was hit with pollen from an elite Burmese studmuffin.

Nutcruncher

Type: 100% Indica

Lineage: Airborne G13 X Petrolia Headstash

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time:

Breeder's Description: Airborne G-13 x Petrolia Headstash. Some seriously strong indica that Reeferman found made his left nut tingle. Big chunky nuggets, low odor. Easy to grow plant good for beginners. Nice green nuggets with plenty of frost. A proven medicinal strain excellent for pain. Great outdoors too.

Odin's Hammer

Type: 80% Sativa 20% Indica

Lineage: Kodiak Gold and Acapulco Gold

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time: Early November

Breeder's Description: Odin kept his hammer in his pants, only the ladies and an occasional enemy he wished to defile ever got to see it so the legend goes. Odin's hammer is an F1 hybrid of mythical proportions comprised of Kodiak Gold (Thunderfuck) and Acapulco Gold. The Hammer offers some real WHACK in the head dept. as both parents are some real head hitters, great weed for sex and frolic. I will bet Odin's hammer was pretty abused just like this F1 will be! Nasty, crazy-ass grass! Likes organics. Be careful this is some serious creeper!

Potent Purple

Type: 80% Sativa 20% Indica

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: A cross of Oregon Purple Thai with a refined indica male. This one is electric, heart pounding with a clear high, light green super sticky buds with purple highlights. Old school herb. *30% of Potent Purple seedlings will initially show mutations while they are immature, if these plants are nurtured they will eventually straighten out and grow normally. Clones taken from a plant that has straightened out will look normal. It is a trait from the Oregon Purple Thai mother, best to avoid synthetic hormones, kelp and fish fertilizer while the plants are growing out of their mutancy. It also helps to place them very close to blue spectrum fluoros.

Purple G-SUS

Type:

Lineage: Purple Haze X G-SUS

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Our best Heirloom Purple Haze females were pollinated with the best G-SUS males from a 100 plant selection . We expect extreme hybrid vigor from this cross of 2 extremely different plants.

Purple Pineberry

Type: 20% Sativa 80% Indica

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Late Sept.

Breeder's Description: A classic BC Outdoor strain which has been dominating the commercial market for the past few years. Also known as 'The Purple Pound Plant', this one yields big and finishes fast outside. Great mold resistance. Works well indoors too. Aroma is herby and hashy with hints of raspberry. Buds range from lime green to lavender to purple, are easy to clip and have great bag appeal. Very low odor strain. Prefers to grow outdoors but works indoors too.

Red Congolese

Type: 80% Sativa 20% Indica

Lineage: Congolese Sativa and Mexican/Afghani

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: This F-1 is a cross of exceptional Congolese Sativa with a stable Mexican/Afghani. Super frosty plants produce aromas like sandalwood and honey with a hint of haze. The high is outstanding and very up and powerful yet motivated after its onset. Good commercial potential in SCROG or SOG. Good sativa for beginners.

Reeferman's NL

Type:

Lineage: Northern Lights #1 x Reeferman's NL5.

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Northern Lights #1 x Reeferman's NL5.

Reeferman's Champagne

Type: 50% Sativa 50% Indica

Lineage: Hashplant/Kush X Burmese

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Early November

Breeder's Description: Reeferman's version of the Champagne cutting that was in vogue throughout PNW in the late 90's. The Champagne is a Hashplant/Kush Hybrid and we crossed it lightly with the pollen from a super sweet Burmese male. This one smells of sweet sparkly champagne with dank hashy undertones. A good producer of 50% indica/50% sativa herb that is very relaxing. Makes nice hash.

Reeferman's G

Type: 20% Sativa 80% Indica

Lineage: Airborne G13 X (G13 Airborne x Santa Marta Colombian Gold)

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Early-Mid Oct

Breeder's Description: G13 Airborne x (G13 Airborne x Santa Marta Colombian Gold). From our Cup Winning Love Potion #1 line we isolated a G13 dominant male that was crossed back onto the G13 Airborne cutting. Produces typical G13 type buds well suited for indoor production in SOG. Low odor with good pest, mildew and mold resistance she is easy to grow. Great closet strain. Low stretch. Tastes like herbal resin with lightly sweet and subtle lemony flavors. Great bag appeal. Good all around indica meds.

Reeferman's Grapefruit

Type: 20% Sativa 80% Indica

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: An F1 cross to the original and reliable Sweet Pink Grapefruit mother that SOL built their reputation upon. This outstanding hybrid will amaze you, be prepared to tie up many heavy colas of indica dominant pungent grapefruit nuggets. Extreme frost production! High yields, well suited to any type of garden from closets to coliseums. This grapefruit is also stronger than the original, watch out!

Reeferman's Hashplant

Type: 100% Indica

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: Reeferman's state of the art hashplant is an exceptional hybrid well suited for commercial production in Sea of Green and Bucket systems. A hardy strain great for beginners as it is resistant to pests and disease. Excellent frost production, AAA super bag appear. Lime Green. Low Odor. Heavy Indica. Stalky plants.

Reeferman's Herijuana

Type: 30% Sativa 70% Indica

Lineage: Steve Tuck Herijuana

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time: Early-Mid Oct.

Breeder's Description: Using select Herijuana seeds from the original breeder, we have taken the sativa pheno and crossed it back to the indica pheno. Really nice smoke in every sense of the word, nice balanced high, super crystal production.

Reeferman's Romulan

Type: 20% Sativa 80% Indica

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: We've reinvigorated the original decades old Romulan cutting making a Romulan which is easier to grow and yields better while preserving the very pleasurable high and truly distinct aroma of the original Romulan cutting. Works great both indoors and out. Has distinctive grapey, berry, piney, peppery and earthy flavors. Great medicinal strain. Hardy. Good pest resistance.

Reeferman's Sour Diesel

Type: 50% Sativa 50% Indica

Lineage: East Coast Sour Diesel Clone X Kush IBL

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time: November

Breeder's Description: The original Sour Diesel clone was crossed with a classic citrusy Kush ibl to make something really explosive. Easy to grow, making high yields, crazy shit in both the flavor department and deep stash headies compartment, weed that you lied to your wife about and said it was gone much sooner than it actually was, all just to fulfill your hunger, your fiendish fiendish cannahunger.. this weed proves some good things actually come from New York ..SOME BAD ASS SHIT!!!

Reeferman's Space Queen

Type: 50% Sativa 50% Indica

Lineage: Romulan Joe Clone X C99

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: Romulan x C-99, a Vancouver Island classic reborn. Stinky, complex aromas with strong pine, pineapple and earthy tones. Strong well balanced sativa/indica high. Great bag appeal.

Romulan X Blueberry Sativa Feminized

Type: 30% Sativa 70% Indica

Lineage: Romulan Joe Clone X Blueberry Sativa Revgen

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Late Oct. - Early Nov.

Breeder's Description: The original Romulan from Vancouver Island merges with our old school Blueberry Sativa pheno to make one humdinger of a strain. This one grows fairly columnar with a nice frame and short side branches. Some have blue hues. Really unique herb with excellent potency that is hard to build a tolerance to. Has nice dry piney and blueberry aromas, this one is a complex mix of indica and sativa which comes on strong and stays long. Decent mite and mold resistance. Great frost production, makes some killer hash. Top shelf medicine. Works well in Coliseums and Sea of Greens. Great plant for beginners as satisfaction comes easy.

Royal Hawaiian

Type: 50% Sativa 50% Indica

Lineage: Various Hawaiians

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Early Oct.

Breeder's Description: After 8 years of breeding with various Hawaiians we have come up with The Royal. 50% Indica/50% Sativa, 100% Hawaiian. She is an F-1 Hybrid of the best Hawaiian Indica and Hawaiian Sativa in our collection. High yielding. Very pungent with sweet, skanky and earthy aromas. Good hash maker. Super stinky, carbon filter recommended. Good SOG plant.

Señor Garcia

Type: 90% Sativa 10% Indica

Lineage: Oregon Purple Thai X Panama Red

Indoor Harvest Time: 10-12 Weeks

Outdoor Harvest Time: Dec.

Breeder's Description: Oregon Purple Thai x Panama Red, some trippy sativa named in honor of Jerry Garcia. A joint of this will send you on a journey through time and space. For experienced growers only, these plants are very touchy feeders preferring organics and a light feeding regime 1/3 to 1/2 strength. Striking purple hues and red hairs make this some pretty pot too. Some will have full on purple stalks. A small % will be mutants (see RM-13 Potent Purple). Very pleasant sweet and sour aromas.

Skunkaberry

Type:

Lineage: Newberry X Chinese Indica

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: A most delicious cross of Newberry with a Chinese Indica Male. One of our tastiest strains with sweet and skunky berry flavors and a relaxing indica dominant high. Good night-time smoke. Easy to grow, decent mold resistance, also works well outdoors. Great SOG plant. Excellent bag appeal.

SugarWarp

Type: 75% Sativa 25% Indica

Lineage: Texada Timewarp X Burmese

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time: Early-Mid Oct.

Breeder's Description: An F1 hybrid of Burmese and a local favorite Texada Timewarp. Our sweet and frosty Burmese male was used to pollinate the 26 year old Timewarp cutting resulting in a big yielding sativa dominant plant that smells of sweet nectar and tropical fruits. Long lasting euphoric high that will put a smile on you face for hours. Low paranoia strain. Good yields indoors in well lit gardens, works well in a SCROG or Buckets. Huge yields outdoors, can get very bushy. Good mold resistance. Great plant for climates that allow for growing into early October.

Tajikistani X Headstash

Type:

Lineage: Tajikistani Hashplant X Petrolia Headstash

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Our heirloom Tajikistani Hashplant was hit with pollen from a very short and stinky Petrolia Headstash boy.

Timewarp X Headstash

Type: 50% Sativa 50% Indica

Lineage:

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Late Sept.

Breeder's Description: Our best yielding outdoor strain that grows well in most of the states, this one makes some fruity skunky chunky and greasy nuggies. Huge bushes. Very vigorous easy to grow, nice mold resistance. Frosty lime green buds. Good medicine with a euphoric happy high. Hardy plants.

Tropical Timewarp

Type: 90% Sativa 10% Indica

Lineage: Timewarp (African) X Punta Roja Colombian Red

Indoor Harvest Time: 10-13 Weeks

Outdoor Harvest Time: Early Nov.

Breeder's Description: A cross of Punta Roja Colombian Red with our beloved

Timewarp (African) cutting. Big ass crazy sativas that kick ass in the southern states, Australia and southern Europe. Strong sativa buzz with a hint of indica that hits in the chest and follows with a case of the giggles. Sweet fruity tropical aromas, this is very aromatic herb. Loves organics. Moderate feeder. Lime green buds with red hairs. Super frosty. Give her lots of love and she makes huge bushes and crazy yields of outstanding herb.

Viper

Type: 95% Sativa 5% Indica

Lineage: Blackseed X Burmese

Indoor Harvest Time: 9-11 Weeks

Outdoor Harvest Time: Early-Mid Oct

Breeder's Description: A new generation sativa F1 hybrid of our elite Blackseed mother pollinated with a trio of frosty aromatic Burmese fathers. The Viper is some seriously chronic sativa that is required growing material for anyone who considers themselves a cannabis connoisseur or terpenoid enthusiast. She is sweet, skunky and piney with exotic aromas are hard to describe but linger on the tongue for hours. Viper will soon be treasured for her frost caked greasy buds and refined very potent stratospheric sativa high. Great yields.

Willie Nelson

Type:

Lineage: Vietnamese X Highland Nepalese

Indoor Harvest Time: 10 Weeks

Outdoor Harvest Time: Late Oct.

Breeder's Description: Willie Nelson is an F1 hybrid between Vietnamese and Highland Nepalese. This was bred specifically for the man it's named after, a good ol boy who likes old school sativas, so we combined the best of old school and new school to create Willie Nelson. You'll be singing along to an old Willie song in about 10 weeks. Finishes quick outdoors for a strong sativa, and has good mold resistance. Good yield, sweet and sour taste, extra cerebral in effect.

Willijuana

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 10-14 Weeks

Outdoor Harvest Time: Mid-Late Oct.

Breeder's Description: An F1 hybrid of some of our favorite sativas, Vietnamese and Burmese using the same Vietnamese mother that was used in Willie Nelson. If you are looking for a tasty potent sativa that yields well look no further than Willijuana. Unique sweet and sour skunky aromas with a high that will elevate and captivate audiences for hours. Frosty buds that feel greasy when squeezed. Good mold resistance. Slightly bushy with many branches that are filled with buds. Excellent SCROG or Bucket strain indoors. Huge yields outdoors in the southern USA.

Sagarmatha

Blueberry Bud

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: Blueberry is back and better than ever. This award-winning wonder from the Pacific Northwest has provided customers with excellent smoke and breeding stock. Known for her aroma and blueberry taste, she has become a legend amongst cannabis connoisseurs on both sides of the Atlantic. After extensive breeding trials in Holland, the stability and growth patterns have become more consistent and predictable for growers. Ganja growing gurus have raved over the cannabis characteristics she delivers. Put flavor and punch back into your stash with a fresh bouquet of Blueberry Bud.

Blue Thunder

Type: Mostly Indica

Lineage: Blueberry and Matanuska Tundra

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: Blending the proven Blueberry and the famous Matanuska Tundra turned out to be one of our most flavorful hybrids. This

combination produces flowers containing the flavor and aroma of Blueberry with a slightly larger cola-diameter. Some individuals will lean toward the respective parents, so the farmer can choose specimens with personally desired characteristics, making her an excellent hybrid.

The blueberry taste is unmistakable to the tongue and expanding in the lungs. Nugs vary from deep green to dark turquoise in color, side leaves can be left on the buds or saved for hash making. The high seems to last slightly longer with pleasant peaks.

A pleasing stone you will be under, while smoking Blue Thunder.

Bubbleberry

Type: Mostly Indica

Lineage: Bubblegum and Blueberry

Indoor Harvest Time: 65 Days

Outdoor Harvest Time:

Breeder's Description: Bubbleberry has been one of Sagarmatha's most satisfying varieties to date, creating a legend for herself in the grow rooms and neighborhoods of cannabis connoisseurs. Originally conceived in 1996, Bubbleberry has made a perfect hybrid, combining all of the fine qualities of the award winning parents, the ever famous Bubblegum and Blueberry strains. In 1998-1999 this luscious lady won the prestigious San Francisco Bay Area Growers award. We acknowledge that the expertise and diligence of the individual growers also played a role in her victory and we wish to thank each and everyone of those providers.

This sturdy plant produces larger buds with more strength and taste than original Bubblegum or Blueberry. Bubbleberry is very hardy and spidermite-resistant. Pungent, sticky flowers with an overpowering aroma provide the smoker with a bubbly high and a long lasting buzz. Filtering the air system should be mandatory when cultivating this cannabis delicacy.

Sure makes blowing bowls of bubbles more fun!

Diamond Head

Type:

Lineage:

Indoor Harvest Time: 50-55 Days

Outdoor Harvest Time:

Breeder's Description: Our Flow and a wonderful crystal-laden beauty from the Big Island have been united to form a powerful purple pineapple plant that will please any big kahuna. The flavor has a sativa sweetness that melts on the tongue as it comes thru the bong. The high is soaring at first and then levels out to a meditative buzz indicative of our typical Flow.

With Diamond Head in your crops, you will have the greatest pokalolo props!

Early Riser

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: Middle of September

Breeder's Description: Early Riser is our first variety especially developed for outdoor production in northern climates. Several generations of select breeding - choosing individuals with the shortest flowering period combined with the highest density of cannabinoid resin - have produced a wonderful example of botanical wizardry. This species is truly worthy of supporting the same high-quality standard of exceptional cannabis that Sagarmatha has provided for her scrutinizing clientele. The aroma and flavor of Early Riser is sweet with a minty aftertaste.

The high is uplifting and motivational, releasing the sun's natural energy with every bowl. So let the sun shine in and don't get burnt!

Gardener's Choice

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Random mix of Sagarmatha seeds. These seeds are collected from the same stock as our premier seeds and research stock used in producing our end products. The genetic information has not been compromised and all the seeds are of high quality. Amounts and types of seeds are randomly determined by harvest results. Perfectly suited for growers who would like to

have variety and superior quality in their gardens. Sagarmatha recommends this variety for veterans, hobbyists or beginners who love botany and wish to have many samples of fine connoisseur smoke in their treasure chest. If variety is the spice of life, these plants are it.

Kwik Kali

Type:

Lineage:

Indoor Harvest Time: 55-70 Days

Outdoor Harvest Time:

Breeder's Description: Kwik Kali is a new hybrid that combines our award-winning 'Western Winds' (Kali Mist) with the soon-to-be-legendary Stuporsonic, a super-fast flowering sativa. Kwik Kali has a shorter flowering period than Western Winds and provides a high celestial altitude. The taste and aroma have been maintained, keeping the traditional haze influence of her parentage. Plants tend to have a classic sativa shape with several budding sites. No longer is the lengthy flowering time a consideration when producing a super sativa delight.

Let Kwik Kali put you into the fast lane towards the winner's circle.

Mangolian Indica

Type: 100% Indica

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: Rocking the Grey Area Coffeeshop for more than four years, her reputation for flavor and strength has become world-renowned. A Sister to Slyder, this variety produces a mostly pure Indica with a fantastic mango bouquet and savory taste. She is similar to Slyder in potency, but she is much more fragrant. Serrated, sativa-like leaves and beautiful orange pistils dot the crystallized Indica buds. The stone is long lasting and lethargic. A sample grown outdoors (in Hungary) was as beautiful and potent as many of the fantastic flowers from Northern California that I have had the privilege of smoking!

Great for those non motivational daze, a most pleasurable smoke.

Matanuska Mint

Type:

Lineage: Matanuska Tundra and Grey Mist

Indoor Harvest Time: 65 Days

Outdoor Harvest Time:

Breeder's Description: The legendary Matanuska Tundra and Coffeeshop Grey Area's multi award- winning Grey Mist have been combined to create wonderfully delicious, aromatic flowers with a plethora of crystals. Unlike Matanuska Tundra, a plant that provides a creeper type stone, this girl comes on fast, with the exhalation of your first toke. Another rush comes on shortly after, giving the smoker a long lasting stone.

She is also great for medical patients with complaints of pain.

Matanuska Mint will be a trophy in any growers stash or quickly converted to cash!

Matanuska Tundra

Type:

Lineage:

Indoor Harvest Time: 60-70 Days

Outdoor Harvest Time:

Breeder's Description: This variety brings back that majestic legendary marijuana from the great Alaskan Northland. Highly recommended by the best fishing and hiking guides in the Matanuska Valley. The buds are huge and rock-hard as Denali "Mt. McKinley" herself. Intense flavor, chocolate aroma and potency have combined to form the most dense variety we have had the pleasure of producing thus far.

A glacier of THC crystals frosts her colas and she packs more power than an icepack polar bear. Medical patients have mentioned that she is very beneficial for persons with pain ailments. The "creeper" quality of the smoke comes on slow and smooth, like a hike up a majestic mountain peak.

Enjoy the view, with a smile on your face and a gleam in your bloodshot eyes.

Persons prone to altitude sickness should use caution.

Northern Lights #9

Type:

Lineage:

Indoor Harvest Time: 55 Days

Outdoor Harvest Time:

Breeder's Description: After years of heartfelt requests for a Northern Lights strain, Sagarmatha has engineered a superior version of the NL legend. The flowering time is acceptable and fat chunky nuggets can be expected. NL#9 delivers the finest qualities expected from that variety: a short plant with a voracious stone and minimal smell. Fantastic for gardens where smell is an unfavorable factor. Also fine for persons who desire a heavy, lethargic stone. For a great connection, dial NL#9.

Peak 19

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 65 Days

Outdoor Harvest Time:

Breeder's Description: Peak 19 was the original western name for Mt. Everest. With similar magnitude and strength as the majestic mountain herself inspires, F1 hybrid Peak 19 will fulfill your cannabis desires. The potency of this plant will take you soaring high above the rigors of daily existence. Thought-provoking and physically stimulating, the highs associated with Peak 19 are somewhat trippy in nature. This smoke should be enjoyed mostly by sure-footed, high-altitude experienced sherpas or persons with a high sense of adventure. The matrimony of Stonehedge and Matanuska Tundra is one of Sagarmatha's most prized and "flavourite" delicacies, providing a palatial delight and a celestial height for every high mountain trekker. Peak 19 can be your sherpa to the summit.

Slyder

Type: 100% Indica

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: This Indica plant produces dense, crystallized buds with a strong aroma. Originally developed from seeds obtained in Afghanistan, the strain was crossed with a potent Northern Light to make it possible to be

cultivated indoors.

This variety is superb for indoor production because of low smell and high yields with punch.

She produces a strong lethargic stone that induces an imagined paralysis or weightiness to the feet. Persons often will “slide” their feet instead of lifting them, usually from the television to the kitchen and back again. Hence the name Slyder. Best enjoyed around the house on lazy Sundaze.

So have a smoke another toke, and slide into another dimension.

Special K

Type:

Lineage:

Indoor Harvest Time: 65-75 Days

Outdoor Harvest Time:

Breeder’s Description: Special K (Kali) was the first cross using Western Winds. With a high THC rating 18% and large girthy colas, she proved to be a favorite of many of our (Hazy) customers. Flower tops are long, containing giant, crystal-covered calyxes endemic to Western Winds, however, tops are of a higher density. Trimming is a short pleasure since the number of side leaves and close cutting are few. The buzz is long and cerebral with a strong onset. The flavor is slight sandalwood and can be tasted when using a waterpipe.

Wake and bake with a mentally nutritious and very delicious bowl of Special K!

Stonehedge

Type:

Lineage:

Indoor Harvest Time: 65 Days

Outdoor Harvest Time:

Breeder’s Description: Stonehedge is a marijuana of megalithic proportions. This plant has vigorous growth and excellent crystalline structure. By far the largest and most dense sativa we have, also a Cannabis Cup award winner in the late 90's. Her lineage consists of an old style Cambodian type plant with a slight Western Winds influence that enhances the sativa strength and pleasure. The high she possesses is soaring and overwhelming, providing the smoker with a lithographic outlook. Stimulating, cranial sensations are often followed by an upswing in altitude and attitude. Whether taken in the evening or after work,

her magic is well received.

Not recommended for operating heaving equipment "unless it's you."

Stuporsonic

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: Stuporsonic is our fastest flowering species as of yet. Given by Swedish growers, this plant has acclimatized herself to a short outdoor season. Because she is able to withstand a cold climate and limited flowering period, she performs remarkably. Unlike many varieties that flower quickly, Stuporsonic provides a soaring, stratospheric high. Definitely the most potent outdoor plant (grown in Holland) we have had the pleasure of smoking.

The flavor is sharp and spicy, giving the grower yet another admirable quality. With Stuporsonic you grow higher, faster plants, guaranteed to bring in your harvest before the competition.

So relax and fly high with Stuporsonic.

Western Winds

Type: Mostly Sativa

Lineage:

Indoor Harvest Time: 70-75 Days

Outdoor Harvest Time:

Breeder's Description: An almost pure Sativa with a soaring, cerebral high. Also a Cannabis Cup award winner with the Haze taste and high. Western Winds has been used in several breeding combinations for Sagarmatha, creating many champion varieties. A favorite amongst Rastas who wish to have a high energy buzz. Fantastic for conversation or romance with its relaxing and invigorating qualities. She has a unique Oriental aroma and spiritual atmosphere. Whether smoked in the morning or evening, the experience is always rewarding and pleasurable. Much of the staff at Sagarmatha states that Western Winds is their nug of choice.

So put Western Winds in your sail and ride the high tide.

Wonderberry

Type: Bubbleberry and William's Wonder

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: A blend of the vigor of Bubbleberry with the bushy, luxurious growth pattern of the American variety Williams Wonder. The smoke is tasty and possesses the scent of a flowery bouquet.

The high is heavy and long in duration, leaving the smoker with enough energy to be mobile.

Yumbolt

Type:

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: Yumbolt brings back that old-fashioned flavor from the fabled hills of Humboldt Co. California. Possessing a sedative stone with an outdoor aroma, she will often induce heavy eyelids with a satisfying smile. From the first toke till the last the taste remains. A producer of large succulent flowers, this girl will qualify for every grower's wants and desires. Cannabis connoisseurs cannot resist her hypnotizing powers. She is believed to have originated from Himalayans of Afghanistan and climatized in the mountains of Humbolt County California in the late 70's. Several generations later in the early 90's we were blessed with the seeds and then propagated them in Holland. Sagarmatha entered her in a Cannabis Cup and received an honorable mention. An outdoor sample from a customer in 2001 had similar characteristics as the samples smoked in Humbolt in the early 80's.

These nuggets often resemble dense, slightly golden frosted pinecones. Another amazing feature is the formation of tunnels of trichomes secreted on the tiny leaves that have curled in on themselves surrounding the tops.

Yumbolt will bring you high up in the hills and let you experience some real Californian sunshine.

Seedsman

Skunk #1

Type: 75% Sativa 25% Indica

Lineage:

Indoor Harvest Time: 63 Days

Outdoor Harvest Time: Mid Oct

Breeder's Description: Skunk No. 1 was the first true stabilized hybrid to enter the Dutch Cannabis greenhouses. Sacred Seeds created it in the late 1970s from Afghani Indica, "Acapulco Gold" Mexican Sativa and Colombian Gold Sativa. For the first time this Strain provided growers with the good taste and high of a sativa coupled with the quick heavy flowering of an indica. Easy to grow and a standard to which others are measured. THC = 14-16%

Mexican Sativa

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 63 Days

Outdoor Harvest Time: Sept-Oct

Breeder's Description: Mexican Sativa is a stabilized Sativa hybrid and is therefore true-breeding. It was bred in Mexico from a Pakistani Hash plant and a Durban Sativa. This strain is widely grown due to its sweet Sativa taste & high and its reliable early harvest.

Original Haze

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 98 Days

Outdoor Harvest Time: Late Oct

Breeder's Description: Sacred Seeds bred Original Haze in the late 1970s from a combination of several Sativas, including a Mexican/Columbian, some Thai and South Indians. Despite its long flowering and below average yield, this strain is acclaimed worldwide to have a taste and high superior to all other existing Cannabis strains. The flavour is typically sweet and sour and the high mildly psychedelic and uplifting. Excellent breeding parent! THC =10-20%.

Afghani #1

Type: 100% Indica

Lineage:

Indoor Harvest Time: 6-7 Weeks

Outdoor Harvest Time: Mid to late Sept

Breeder's Description: Afghani No 1 is a traditional landrace Strain collected in the mountains of Afghanistan by Sacred Seeds in the 1970s. It was one of the first pure indica true-breeding strains used in worldwide cannabis breeding programmes. It is well known for its dense buds, copious Resin production and its excellent properties for Hashish production. This Strain has been acclimatised to western growing conditions by selectively crossbreeding various Afghani No 1 parents and selecting offspring plants with favourable traits.

The popularity of Afghani No 1 can be seen through its use as a genetic building block in many predominately indica strains created or preserved within the Sensi Seed bank gene pool and other seed companies.

Afghani No 1 is a vigorous growing yet small bushy plant, with a strong stem that is renowned for its strong aroma when flowering. Its classic indica properties and true-breeding nature make it an ideal indica parent plant.

Durban Poison

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 70 Days

Outdoor Harvest Time: October

Breeder's Description: Durban Poison is a very early finishing pure sativa with a good sweet aniseed taste and strong physical high similar to Thai varieties. Plants produce large buds that are well known for their resistance to disease and mould. These seeds are specially selected from crops grown in the wild in South Africa. THC = 10%.

Swazi Redbeard

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 12 Weeks

Outdoor Harvest Time: November

Breeder's Description: Renowned for its spectacular red hairs, Swazi is a high

yielding and resinous pure sativa, which gives a strong natural high. These seeds come directly from South African breeders living in Swaziland.

This Strain has a strong odour, which has been compared to a "fine cigar" and an "earthy" smoke with a high that is energetic and clear. Buds on this plant can reach the size of an adult's forearm and are typically compact and very sticky.

Malawi Gold

Type: 100% Sativa

Lineage:

Indoor Harvest Time: 84 Days

Outdoor Harvest Time: November

Breeder's Description: These are wild seeds selected from some of the most experienced Cannabis growers in Malawi. Malawi Gold is renowned as one of the best and finest Sativas from Africa. In Malawi, the buds are cured after being tightly bound in banana leaf to give a compact, potent, gold-coloured finish. The flavour could be described as sweet / floral with hints of pineapple. The high has an enjoyably alert mental clarity, but is very psychoactive and long lasting. THC = 9-13%

Indian Skunk

Type: 88% Sativa 12% Indica

Lineage: South Indian Kerela X Skunk #1

Indoor Harvest Time: 70 Days

Outdoor Harvest Time: Late Oct

Breeder's Description: South Indian Kerala was bred by Sacred Seeds in the late 1970's and is one of the finest sensimillas to be found anywhere in the world. It was crossed with Skunk No. 1 by Cultivators Choice to give an earlier maturation and bigger yield. It has the look of Skunk, with the smells and taste of India. THC = 13-15%.

Swazi Skunk

Type: 88% Sativa 12% Indica

Lineage: Swazi X Skunk #1

Indoor Harvest Time: 70 Days

Outdoor Harvest Time: Late Oct

Breeder's Description: Originating from Swaziland (South Africa), Swazi is a high yielding and resinous pure Sativa, which gives a strong natural effect. The

cross with Skunk No. 1 sped up the flowering cycle and increased flower and leaflet size and potency. Swazi Skunk has a sweet pine flavour relished by connoisseurs. THC = 14-18%.

Hawaiian Skunk

Type: 62% Sativa 38% Indica

Lineage: Hawaiian Skunk X Skunk #1

Indoor Harvest Time: 77 Days

Outdoor Harvest Time: October

Breeder's Description: Hawaiian Indica is an Indica / Sativa hybrid with very large female flowers, and resin production on leaves as well as flowers.

Hawaiian Skunk has a citrus smell with a spicy taste and produces a happy cerebral high. It is a short rounded plant with exceptionally broad leaves, which produces a generous yield. THC = 11-17%.

Durban Skunk

Type: 88% Sativa 12% Indica

Lineage: Durban Poinson X Skunk #1

Indoor Harvest Time: 56 Days

Outdoor Harvest Time: Early Oct

Breeder's Description: Durban Poison is a pure Sativa originating from South Africa, and was selected in the early 1970's by Sacred Seeds. It is famous for its early flowering and quick harvest. Cultivators Choice created Durban & Skunk No. 1 in the early 1980's. The cross with Skunk No. 1 has increased the yield and potency of Durban Poison. This Strain is particularly suited to outdoor cultivation. THC = 10-15%.

Hindu Kush Skunk

Type: 88% Sativa 12% Indica

Lineage: Hindu Kush Skunk X Skunk #1

Indoor Harvest Time: 63 Days

Outdoor Harvest Time: Late Oct

Breeder's Description: Hindu Kush is a long-maintained pure Indica strain from the mountains of Afghanistan. Selected by Sacred Seeds in the late 1970s for its excellent hashish production due to dense buds and copious amounts of resin. Crossing with Skunk No. 1 has improved its performance outside of its natural habitat. Hindu Kush Skunk has a mesmerizing and intense high with an excellent flavour of sweet hash and fruit. It is extremely popular for its resin

yield. THC = 14-20%!

Hash Plant

Type: 100% Indica

Lineage: Hash Plant X Northern Lights #1

Indoor Harvest Time: 6-7 Weeks

Outdoor Harvest Time: Late Sept

Breeder's Description: There are many variations of Hash Plant; it reportedly originated as a Lebanese/Thai Hybrid in North West USA and was later hybridised with Northern Lights No 1. Like many popular US strains it was brought to Holland as a clone for further development within commercial seed breeding programmes. It was offered first by the Super Sativa Seed Club and later by the Sinsemilla Seed Company (now Sensi Seeds).

Due to its indica genetics, it is a small, bushy plant, and has unusually large, wide dark leaves. It branches very keenly, which enables it to be very successful when flowering. Its calyx to leaf ratio is one of the largest for any indica Strain.

It has a sweet hashy flavour and aroma due to the high Resin content of the flowers.

Northern Lights

Type: 20% Sativa 80% Indica

Lineage: Afghani, Skunk #1 and Haze

Indoor Harvest Time: 6-7 Weeks

Outdoor Harvest Time: Late Sept

Breeder's Description: The Genetics of Northern Lights is one of the most confused of all existing cannabis strains because there is no one who can take entire credit for its creation. Northern Lights was developed as an indoor seed Strain in the late 1970s near Seattle in Washington, although the Genetics involved in the cross were known to have come from California – the original home of a great many of the most famous cannabis strains. It was initially a stabilised cannabis sativa Strain crossed with an Afghani indica Hybrid.

Northern Lights travelled to Holland as a clone where it was introduced to the commercial cannabis seed market in 1985 by The Seed Bank.

Because it arrived as a clone it could not be inbred for stability and seed

production, therefore Skunk No 1 and Original Haze were used to produce seeds off it so it could be used as a parent plant.

Northern Lights distinctly shows its Afghani indica genetic background; it is a small plant that produces, big highly resinous flowers. Although it was initially developed for indoor growers excellent results have been produced outside. Northern Lights has a sweet resinous taste and produces a physical comfortable but lazy feeling, known to some as 'couch lock'.

Indian Haze

Type: 100% Sativa

Lineage: Kerela X Original Haze

Indoor Harvest Time: 70 Days

Outdoor Harvest Time: Oct-Nov

Breeder's Description: Two of the most renowned Sativas in the world blended to create a hybrid that smells and tastes very sweet and has an energetic high. THC = 14-20%.

Skunk Haze

Type: 88% Sativa 12% Indica

Lineage: Skunk #1 X Original Haze

Indoor Harvest Time: 77 Days

Outdoor Harvest Time: November

Breeder's Description: Sacred Seeds created the Original Haze in the late 1970s. This Skunk x Haze hybrid, combines the excellent effect and taste of Original Haze with the increased yield & shorter flowering period of Skunk No. 1. It has a fruity, sweet taste with an energetic effect. THC = 20-22%!

4 Way

Type:

Lineage:

Indoor Harvest Time: 45-60 Days

Outdoor Harvest Time:

Breeder's Description: This is a 4-way hybrid of our best indoor strains. Although somewhat variable in growth pattern, all tested plants were fast flowering and of very high quality. This hybrid has some of the sweetest, most balanced tastes and highs that we have yet produced.

Afghan#1

Type:

Lineage:

Indoor Harvest Time: 45 Days

Outdoor Harvest Time:

Breeder's Description: Our top Afghanis have been used for this variety. Characteristic are the big, dark Indica leaves, their strong aroma, sturdy stems and high yield. A must for the Indica connoisseur. At the 1994 Harvest Festival this new variety immediately seized the second place in the Indica category.

American Dream

Type:

Lineage:

Indoor Harvest Time: 40-55 Days

Outdoor Harvest Time: Mid October

Breeder's Description: Now here's your chance to grab a piece of the good ol' American Dream. An ideal cash cropper with white crystals frosting not only the buds, but also the stem and beginning of the leaves. This super Indica flowers in seven weeks and will keep you dreaming for hours.

Big Bud

Type:

Lineage:

Indoor Harvest Time: 50-65 Days

Outdoor Harvest Time:

Breeder's Description: One of our most popular varieties. A plant for professional cash croppers. Even experienced growers continue to be amazed and come back to fill their garden with these heavy ladies. It is advisable to tie up the bottom branches as they have a tendency to break due to their excessive weight.

Black Domina

Type:

Indoor Harvest Time: 50 Days

Breeder's Description: This full blooded Indica with large bracts will soon have you on your knees and begging for more. This harsh, overpowering lady simply gushes sticky resin to which most men seem to have a fatal attraction. A word of warning: this powerful compact Indica has had a devastating effect on many a

man, leaving them apparently beaten and whipped, with a strange smile on their faces.

California Indica

Type:

Lineage:

Indoor Harvest Time: 40-55 Days

Outdoor Harvest Time: Middle of October

Breeder's Description: A fine blend of sweet orange flavored Californian strains, combined with a skunky hash flavored Indica. A versatile plant which performs well under all conditions. The more heavily branched specimens tend to be the big yielders.

Durban

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: End of September

Breeder's Description: A very early strain from South Africa. Durban is a compact Sativa with a sweet aroma and an up high. One of the most reliable early outdoor varieties, it will produce chunky, solid buds even during the worst season. If you haven't tried Durban, you are missing out on one of the easiest-to-grow, highest-quality early varieties in the world.

Early Girl

Type:

Lineage

Outdoor Harvest Time: Middle of September

Breeder's Description: This is a mostly Indica variety, one of the earliest in this collection. Very potent, medium yield, with a hashy taste and aroma. These compact plants will tend to grow to one main stem

Early Pearl

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: End of September

Breeder's Description: Early Pearl has always been one of the popular outdoor varieties. Wonderfully sweet and resinous, the plants have a mostly Sativa dominated growth pattern, with excellent potency.

Early Skunk

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: October 1st

Breeder's Description: An excellent hybrid between Skunk #1 and Early Pearl. Outdoor growers are usually dissatisfied with the finishing date of the regular Skunk strain. The Early Skunk finishes about 2 weeks earlier than Skunk #1 due to the influence of the Early Pearl. The influence of the latter is also noticeable in the smell and the high: sweet and smooth. On top of that: the strain combines a good yield with mold resistance.

First Lady

Type:

Lineage:

Indoor Harvest Time: 44-50 Days

Outdoor Harvest Time:

Breeder's Description: True to its name, this is one of the fastest flowering varieties available. These dominant Indica ladies will flower rapidly and grab your attention in the way that only a lady can. Originated in the high valleys near Mazar-I-Sharif, Chitral, and Kandahar, in Afghanistan and Pakistan; this indica cross will remind our older growers of the good old days when the first ladies were introduced in the western world. This strain is characterized by broad plants with short, woody stems and internodes, and large dark green leaves.

Fruity Juice

Type:

Lineage:

Indoor Harvest Time: 50-60 Days

Breeder's Description: An Indica/Sativa cross of the highest order. Both sides of the Indica and Sativa spectrum are fully expressed in this variety. The sweet aroma comes from our most delicious Thai. This rarefied type was originally very difficult to work with, but we eventually found the ideal cross. Expect big yields from this one, with an exceptionally rich sweet aroma.

Guerrilla Gusto

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: Middle of September

Breeder's Description: This outdoor strain tested in northern Spain was brought to us as a thank-you from one of our customers. After playing with the plants for some time we managed to produce this guerrilla grower's Indica. A good choice for the first time outdoor grower, as the harvest time allows us to have the crop in before the end of September. Nice sweet flowers build into good sized buds.

Hashplant

Type:

Lineage:

Indoor Harvest Time: 40-45 Days

Outdoor Harvest Time:

Breeder's Description: One of the most famous cuttings from the North-west USA, Hash Plant® is named for its hashy-tasting, highly resinous buds. For many years it was known as an important building block for other Sensi Seeds hybrids. Now the original Hash Plant® x NL#1 hybrid is available again. This cross of 25% NL#1 and 75% Hash Plant® produces some of the strongest specimens-even experienced Dutch smokers have trouble finishing a joint. This plant has a very fast finish, abundant resin and a pleasant but deep stone.

Hawaiian Indica

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Aloha! Enjoy the tropical sensation indoors. We have crossed a selected Hawaiian lady with our Northern Lights The result is a potent Indica strain with a fresh aroma and a high yield, amply compensating for a longer flowering period.

Hindu Kush

Type:

Lineage:

Indoor Harvest Time: 40-50 Days

Outdoor Harvest Time:

Breeder's Description: This pure Kush originally from the Hindu Kush mountain region is the result of many years of selective inbreeding. The seedlings are very even and consistent, an excellent indoor variety for crops from seed. Wonderfully potent, but not devastating, very mild for an Indica.

Indoor Mix

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: INDOOR MIX Mainly Indica strains in assortment. This package contains forty seeds, the choice is yours. You will definitely find a good parent in this collection.

Jack Flash

Type:

Lineage:

Indoor Harvest Time: 60-70 Days

Outdoor Harvest Time:

Breeder's Description: Yes, here it is, the Jack Herer© hybrid that is easy to grow and already a classic amongst those who know! Everybody who has been growing Super Skunk© before will now choose for this fruity Jack taste with a flash of Haze. It is remarkable easy to grow and fresh and vigorous. It is

recommended that you select the medium long flowering plants for finest quality and best results.

Jack Herer

Type:

Lineage:

Indoor Harvest Time: 50-70 Days

Outdoor Harvest Time:

Breeder's Description: This multiple hybrid is the result of many years of selective breeding, combining 3 of the strongest varieties known to man. Even though we are regularly put under pressure by obsessed growers to give pedigree details, I'm afraid that just as with the Coca Cola recipe this Sensi variety will have to remain a secret. This variety produces so much resin that even the branches bristle with stalked glands. High Times (May 1995): "the bud was heavy with crystals and resin; the high was immediate and cerebral. An excellent strain.

Jamaican Pearl

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: October 1st

Breeder's Description: The Jamaican Marley's Collie certainly did astonish' everybody on the Dutch Highlife Cup of 1999 and was doubtless one of the reasons for winning the big super cup that year. The Jamaican sweetness and characteristic Sativa high of the plant was greatly appreciated by the judges. The same mother was used to realize this sweet outdoor hybrid between the Jamaican and our best Earl pearl flowering, sweetness and mould resistance are some of the qualities of this remarkable outdoor hybrid.

Maple Leaf Indica

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: A most interesting Indica strain with a long history brought out of the Afghan mountains just before the Russian invasion. For some, this precious strain will have a whiff of familiarity because it was used as

an important building block for some of the most famous varieties of today. It's a compact powerful plant with wide fingered leaves and a very sweet Indica Maple aroma.

Marley's Collie

Type:

Lineage:

Indoor Harvest Time: 60-65 Days

Outdoor Harvest Time:

Breeder's Description: At the Cannabis Cup in November 1997 we were honored to meet Rita Marley. She and the atmosphere of the Cup made us decide to start to work on a strain that we would make in respect for Bob Marley, her late husband. Bob Marley not only spread the fine sound of reggae, but also the Rastafarian religious Cannabis spirit, around the globe and we can still feel his vibes today. The whole Sensi Seed research-kitchen was put to work exclusively with some selected Jamaican plants that were present in our mother rooms already for many years. Amazing results were found in an extraordinary hybrid we made with a fresh Indica, which relates to our Maple leaf Indica strain. A fresh, sweet, cerebral Jamaican high with a short internodal length and heavy duty wide fingered Indica leaves. This plant will astonish? Everyone.

Mexican Sativa

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: September - October

Breeder's Description: The Mexican Sativa® is a hybrid containing a Mexican Oaxacan, a Pakistani Hashplant and Durban®. A great mix of international flavors from the fusion cuisine of The Cannabis Castle.

Mother's Finest

Type:

Lineage:

Indoor Harvest Time: 50-70 Days

Outdoor Harvest Time:

Breeder's Description:

Mr. Nice (G13 X Hashplant)

Type:

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: The G13 is an outstanding pure Indica cutting reputedly discovered by the U.S. government research program in Mississippi. Crossed with the Hash Plant it produces one of the best indoor hybrids that unfortunately was only available in the late '80s. Now the Sensi Seed Bank is very proud to have this hybrid in production again and to bring it on the market labeled as 'Mr. Nice'. This is in honor of Howard Marks, an Oxford graduate, who became one of the biggest Marijuana smugglers of our time. After spending 7 years in an American Penitentiary, Howard released his autobiography 'Mr. Nice' and now spends his time promoting the normalization of Cannabis. If you like a solid and resinous bud with a 'double Indica' hashish taste and aroma, it is time to go for the Mr. Nice G13 x Hashplant.

Northern Lights

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: An absolute must for the indoor grower! For many years the Northern Lights® dominated the various Harvest Festivals. Through selective breeding we have succeeded in producing one of the most powerful plants in the world. On top of that, we have developed a pure Indica strain highly adapted for indoor growing: compact, powerful with a good yield and exceptional resin production. A most lucrative plant for the indoor grower.

Northern Lights #5 X Haze

Type:

Lineage:

Indoor Harvest Time: 65-75 Days

Outdoor Harvest Time:

Breeder's Description: This hybrid is the pinnacle of achievement in Cannabis breeding today. The result: an extremely potent plant with a great Sativa high. In the 1994 harvest festival this variety was miles ahead of its competitors. The high yields compensate for the slightly longer flowering period. Hybrid vigor

provides for lush growth, heavy bud formation and abundant resin. A true champion!

Outdoor Mix

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: If you have problems choosing from Sensi seeds vast collection maybe this surprise pack of mainly Indica strains is your thing! This package contains 40 top quality Sensi Seed Bank outdoor seeds.

Ruderalis Indica

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: September

Breeder's Description: The Ruderalis originates as a land race from Hungary and the Soviet Union. The heavy Indica makes it more susceptible to mould , If you are lucky with a good autumn then this will be no problem, so prepare to be surprised by this hardy, good quality Indica.

Ruderalis Skunk

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time: September - October

Breeder's Description: Ruderalis is an early-flowering variety that grows wild in parts of Eastern Europe and Russia. Early flowering characteristics of Ruderalis have been used to improve the outdoor performance of some of Sensi's best varieties. The advantage of a Ruderalis hybrid is that approx. 50% of the seedlings will begin flowering at the 5-7th internodes, regardless of the photoperiod (finishing date Sept. 1). The other half of the seedlings will be much later (October).

Sensi Skunk

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: A strong plant with that typical Skunky taste and high. It has a high calyx-to-leaf ratio with large, full buds (donkey dicks). Its excellent yield makes this one an absolute must for the greenhouse grower.

Shiva Shanti

Type:

Lineage:

Indoor Harvest Time: 50-55 Days

Outdoor Harvest Time:

Breeder's Description: This Afghani with its penetrating Indica aroma is one of the better yielders in the collection. It's pleasant taste and above average potency make this an attractive variety for beginners.

Shiva Shanti II

Type:

Lineage:

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: The Shiva Shanti II is a 3 way hybrid which consists mostly a Afghani strain that we call Garlic Bud because of its characteristic aroma. The Shiva Shanti II® contains a smaller proportion of this Garlic Bud and is added with Skunk and another Afghani. It is a less stable 4-way hybrid but quality-wise very nice.

Shiva Skunk

Type:

Lineage:

Indoor Harvest Time: 45-55 Days

Outdoor Harvest Time:

Breeder's Description: This cross between Skunk #1© and Northern Lights #5© is one of the most reliable varieties that we have ever produced. Excellent hybrid vigor and yield make this one a snap to grow. Works superbly indoors as well as in a greenhouse. Taste and high are similar to Skunk #1©, a rich sweet

pungency, but with more resin and better yield. High calyx to leaf ratio, you can almost throw those scissors away as very little manicuring is required. An absolute must for beginners or experts.

Silver Haze

Type:

Lineage:

Indoor Harvest Time: 65-75 Days

Outdoor Harvest Time:

Breeder's Description: Although the cerebral high of the Sativa is preferred by many, indoor growers aren't too fond of this type: Sativas get very tall, take a long time to finish off and produce skimpy yields. We have spent years searching for a superb Indica/Sativa hybrid suited for indoor growing. By crossing the Haze, the most powerful Sativa in the World, to a non-dominant Indica we managed to get the height and flowering time of the plant down to an acceptable level and still retain the unique Sativa qualities of the high. The results: the Silver Haze, winner of the '89 High Times Harvest Festival. Don't expect top yields but top quality that will excite the true connoisseur.

Silver Pearl

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: This 3 way hybrid contains Early Pearl©, Skunk #1© and Northern Lights©. This hybrid is quicker and sweeter than the Shiva Skunk©. Excellent indoor and greenhouse results. Plants exhibit frosted resinous characteristics of the Northern Lights #5© and the sweetness and calyx-to-leaf ratio of Early Pearl / Skunk. One of our favorites and in 1994 the winner of the mixed Indica/Sativa category.

Skunk Kush

Type:

Lineage:

Indoor Harvest Time: 50-60 Days

Outdoor Harvest Time:

Breeder's Description: Hybrid between our best Hindu Kush and the famous Skunk#1. It has the distinctive qualities of Skunk and the unique pungency of

Kush together in a vigorous, even blend. Excellent greenhouse performance.

Skunk #1

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: Originally an Indica-Sativa hybrid, Skunk #1© is now one of the most consistently performing true breeding strains in the world. Skunk #1© produces large buds with a very high calyx-to-leaf ratio. An excellent choice for the greenhouse.

Super Skunk

Type:

Lineage:

Indoor Harvest Time: 45-50 Days

Outdoor Harvest Time:

Breeder's Description: This plant is especially developed for Skunk lovers. We have crossed our best Skunks to their Afghani ancestors. Brush against this plant and the room becomes immediately filled with a powerful Skunk aroma. Despite the smell a very pleasant high with a little more body to it than theyskunk#1 One of the winners of the 1990 High Times Harvest Festival where it clearly defeated skunk#1.

Soma - Standard

Afghan Delight

Type:

Lineage: Afghani Skunk and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Afghan Delight is the strain with the most Afghanistan genetics of any of my strains. A mix of Afghan skunk and Afghan Hawaiian, this strain has very wide leaves and a dark green color. It smells even when it's vegging and you touch the leaves. The buds have a white green color when they are done, and a very Afghani Hash smell. Nice weed for smoking in the evening. Leaves a good taste in your mouth. Don't pick it too early!

Amethyst Bud

Type:

Lineage: Super Skunk, Big Skunk Korean and Jack Herer

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Amethyst Bud is a mix of Lavender Bud and Afghani Hawaiian so the dark purple color from the purple Kush part of it's genetics comes through. This bud is on the smaller side but more of them and they are quite dense with many THC crystals visible with the naked eye. The smell is strong and pungent with a good high for relaxing with a good friend. Leaves a delicious taste in your mouth. When it looks like it's ready wait a week.

Amnesia Haze

Type: Mostly Sativa

Lineage: Afghani Hawaiian and Southeast Asian

Indoor Harvest Time: 13-15 Weeks

Outdoor Harvest Time:

Breeder's Description:

Big Kahuna

Type:

Lineage: Big Bud, Skunk #1 and Afghani Hawaiian

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time:

Breeder's Description: Big Kahuna is a good plant for first time grower's, it doesn't branch out too much and has a very large top bud. The smell is very skunky and needs very good smell control in your growing and drying rooms. The flowering time is 8 to 9 weeks. It needs good ventilation as the top bud is very dense and can get mold on the inside, with proper ventilation it does just fine. Strong skunky aroma and flavor. Mellow high.

Buddha's Sister Soma Skunk V+

Type:

Lineage: Reclining Buddha and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Previously called Soma Skunk V+, this variety was renamed Buddha's sister to suit her tendencies and advance her appeal to

Amsterdam coffee shops. What's in a name? Directly after this deliciously good weed acquired a more intriguing name, she regularly sold out at the coffee shops, and remains one of the best selling weeds available at De Dampkring.

This sibling of Siddhartha is tall and lanky. In the cross with Afghani Hawaiian, she has a considerably increased yield, but less sweet taste than her other half, the Reclining Buddha. Buddha's sister has a flavor like a tart cherry candy, and the scent is similarly tart rather than sweet. The buds have a slippery, silky feel, which means an abundance of greasy resin to make into fantastic hash. She even gives a lot of finger hash that you won't want to wash away after grooming plants. As with all of Soma's varieties, Buddha's sister is medicinal quality cannabis, therapeutic for many conditions. The high is powerful, creative and cerebral in its effects.

Citralah

Type:

Lineage: Chitral and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Citralah a great strain for making hash from. Half it's genetics come from Chitral Pakistan where it is solely used for hash production, and Afghani Hawaiian for the other half. This plant has a strong citrus like smell and taste. It has a very good yield and takes 9 to 10 weeks to finish. Great finger hash when manicuring and great water hash as well . Nice daytime weed.

Free Tibet

Type:

Lineage: Tibetan and Afghani Hawaiian

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Free Tibet the first and only strain using this name beware of imitations as far as this strain goes there are imitations out there. The authentic Free Tibet is a mix of Nepalese hash plant and Afghani Hawaiian, and has a very pungent odor. The taste is exotic and a high that's a favorite with many of my close friends. It makes strong side branches so it needs some room to grow. The main stalk is quite sturdy. Good for outside in cold climates.

G13 Haze X Amethyst Bud

Type:

Lineage:

Indoor Harvest Time: 70-84 Days

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X Buddha's Sister

Type:

Lineage:

Indoor Harvest Time: 70-84 Days

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X Haze Heaven

Type:

Lineage:

Indoor Harvest Time: 77-91 Days

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X Lavender

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X New York City Diesel

Type:

Lineage:

Indoor Harvest Time: 84-98 Days

Outdoor Harvest Time:

Breeder's Description: Acrid diesel still hangs in the humid city air and it is anything but noxious. The taste of this famous head-spinning, sativa-dominant hybrid . The buoyant high maintains its impressive duration with alternating waves of euphoria and trance, but the paranoia component has softened considerably. Definitely not for the lightweight smoker or people not accustomed

to being turned inside-out after a single inhalation. Yields are substantial for experienced growers given to exercising patience during the photoperiod.

G13 Haze X Rock Bud

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X Somango

Type:

Lineage:

Indoor Harvest Time: 70-84 Days

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X Somativa

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X White Light

Type:

Lineage:

Indoor Harvest Time: 77-91 Days

Outdoor Harvest Time:

Breeder's Description:

G13 Haze X White Willow

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description:

Haze Heaven

Type:

Lineage: Northern Lights #5, Haze and Afghani Hawaiian

Indoor Harvest Time: 10-11 Weeks

Outdoor Harvest Time:

Breeder's Description: Haze Heaven is just that, a haze that doesn't take as long to finish as most others, a great yielding plant with giant buds, and that great haze flavor with that hint of Afghanistan in the back of your mind. As with all strains if you don't give your plants just the right amount of quality energy that they need on all levels they will get stunted and take longer to finish. This one again is not for inexperienced growers, experience in patience with cannabis harvest's is definitely needed. This haze doesn't put you in a daze, it takes you to your center.

Kahuna Soma #9

Type:

Lineage: Super Skunk, Big Skunk Korean, Jack Herer and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: One of Soma's favorite strains, Kahuna is a 4-way cross that brings together a wide set of influences for a complex high. Soma recently renamed his Soma #9 strain Kahuna, which is a Hawaiian title for a religious or spiritual leader that literally means "Keeper of the Secret." The Kahuna variety has both tropical influences in its parentage, and spiritually attuning effects when used. A medium-sized plant, Kahuna produces few side branches and a top bud that will impress you with its length and density. Due to the big, tight buds, conditions must be tended carefully for this variety. For indoor gardens, attention to humidity levels is key for mature buds that are mold-free. While recommended for indoors where variables can be controlled, outdoor growing is possible in reliably dry climates, although an unseasonably rainy season could ruin the promising look of these thick buds with insidious mold. When Kahuna's proper conditions are met, the yield potential is fantastic, offering a harvest of up to 500 g per square meter in a standard sea of green. This variety has shaken a little pepper into an otherwise sweet-tasting puff. . very sweet smelling variety with a powerful cerebral high that invites creativity. This is great daytime pot, complementary to most introspective activities, and comfortable for socializing with colleagues and friends. Kahuna offers medicinally valuable properties for many conditions without interfering with

quality and clarity of one's thought.

Kilimanjaro Soma #1

Type:

Lineage: Super Skunk, Big Skunk Korean, Big Bud and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Kilimanjaro formerly known as Soma 1+ lives up to it's name. This bud is quite large with many light red hairs and a real fruity smell. The high is very up and creative, a nice daytime weed. The harvest time is a little long but the yield is worth the wait. A very nice combination of Afghanistan, S.E. Asian, and Sativa, it is not for you first time growers. This strain is better for more experienced grower's, very medicinal!

Lavender Soma #10

Type:

Lineage: Super Skunk Big Skunk Korean and Afghani Hawaiian

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time:

Breeder's Description: Soma #10 brings together a world of weed. Strains with histories that traverse Afghanistan, Hawaii, Korea, the U.S, and Europe are all melded together in this 3-way cross. An exotic looking strain, Soma #10 develops the darkest purple coloration you can imagine. The color is intense, with the leaves turning nearly to black at the ends, they are so deeply saturated with color. The extra dense buds give off a sensually spicy smell akin to Afghani hash. The high calyx to leaf ratio and the legginess of this plant make for simplified manicuring. While not as tall as the Haze strains, Soma #10 can shoot to tall heights when allowed an extended vegetation period before being placed into the flowering phase. If grown in a sea of green, Soma recommends a shortening the veg cycle in order to control the height. This strain will also do well as a multi-branched plant. Outdoors, this variety can thrive in a most temperate zones, although arid climates known for their rich agricultural promise are of course optimal. Soma #10 has a flavor that is similar to Afghani hash, producing a captivating high that circulates through every chakra. A terrific evening or rainy day smoke, Soma #10 will leave you feeling relaxed and mellow, possibly to the point of sleep.

New York City Diesel

Type:

Lineage: Sour Diesel Bagseed X Afghani Hawaiian

Indoor Harvest Time: 11 Weeks

Outdoor Harvest Time:

Breeder's Description: Third place winner at Cannabis Cup 2001.

Reclining Buddha

Type:

Lineage: Holland's Hope, Super Skunk and Big Skunk Korean

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Reclining Buddha is a 3-way hybrid that combines the genetics of Holland's Hope with Super Skunk and Big Skunk Korean. Circulating in the Netherlands during the 1980s, Holland's Hope is a mold resistant strain with a very close nodal structure whose name can be attributed to her success in outdoor grows, even in Holland's wettest season. Reclining Buddha has held this characteristic, and combined it with the enjoyable smell and yields of its other two parents. Previously named Soma Skunk V, the new, enlightened name came out of a philosophical session prompted under her influence. A fairly short plant, Reclining Buddha must remain in vegetative phase for a considerable amount of time to become a big plant. She also will not make a lot of side branches, and the ones that do tend to be smaller, a combination that predisposes this variety to do well with minimal effort in a sea of green set-up. Reclining Buddha's buds are tight and narrow, allowing moisture to escape easier than short thicker bud formations. Try this one outdoors even in humid locations for a covert plant that delivers high-quality yield. Buddha buds form many dark auburn hairs early. When everything around it still has white hairs, Reclining Buddha's hairs have turned a color that tempts you to harvest, but exercise patience. Reclining Buddha needs a full 9 weeks to reach maturity, and the high just gets better with the wait. This medicinal quality cannabis has the taste of a sweet cherry candy and an uplifting creative high that is lucid and mentally stimulating. 3rd place, 1999 High Times Cannabis Cup, best indica.

Rock Bud Soma A+

Type:

Lineage: Super Skunk, Big Skunk Korean, Afghani, and Afghani Hawaiian

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Soma A+ may become the pet of the class. Short to medium in height, this mostly indica strain displays the bushy structure and dense buds of its Afghani heritage. She is a good sea of green plant since height and branching are easy to manage. With an extended vegetation period, Soma A+ can be coaxed into a larger plant, and will perform well while still being short enough to stay inconspicuous in an outdoor garden. A fast bloomer, Soma A+ finishes in about 8 weeks and wards off spider mites, often being the last plant still holding these pests at bay. The yield makes this a bud for a connoisseur rather than a commercial grower, but the ease of growth and the quality of the final product will make this a coveted weed to share with your inner circle. At maturity, Soma A+ develops sugary red leaves reminiscent of autumn's best maples. As the mostly indica genetics would lead you to expect, the buzz is relaxing to the body and mind, and good for contemplation or napping on rainy day afternoons. Better as a day ender than a day starter, Soma A+ provides medicinal quality cannabis with healing properties for what ails you, whether physical, psychological, or spiritual in nature.

Soma Salad

Type:

Lineage:

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: From New York City Diesel to Haze Heaven; the Soma Salad is a mix of more than 10 of my many strains. You may get Lavender, you may get Somango, you may even get Rockbud! It's like a Cracker Jacks box - you don't know what your prize is until you open it. Keep it green -- Soma

Somango

Type:

Lineage: Super Skunk, Big Skunk Korean, and Jack Herer

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Somango blends the multiple hybrid Jack Herer with Big Skunk Korean to form the fruitiest of all Soma's strains. Previously known by Soma #5, this complex cross was renamed for its tropical mango aroma and flavor. Somango is optimal as a multiple branch plant, since its genetics encourage long side branches and a height on the taller side. A sea of green method can still be undertaken, but branching and height will need to be controlled. Soma prefers to grow on soil indoors with fully organic nutrients, but other media will also give satisfactory results. As it matures, the leaves shade to purple and the buds become covered in a carpet of crystals that makes fine finger hash. While a moderate yielder, Somango's bud possesses sublime qualities. The fragrant and tasty Somango smoke delivers a buzz that is very uplifting and mentally stimulating in its effects. You can smoke this pot without turning into a remote control-wielding couch potato. Euphoric and alert, Somango is a good choice.

Somanna Soma Wide+

Type:

Lineage: Super Skunk, Big Skunk Korean, C. Chinensis, and Afghani Hawaiian

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Somanna formerly Soma Wide+ is the only strain with cannabis Chinensis a type that grows in China, it has a very interesting characteristic of sometimes making an extra budlet on the stem of the large fan leaf. It grows quite wide in that the side branches really become a large part of the plant. You have to give it room. It has quite a nice color, limey green with very orange hairs. It looks a lot like the old orange bud, but tastes much better. Mellow sativa high.

Somativa

Type:

Lineage: Super Skunk, Big Skunk Korean, and Jack Herer

Indoor Harvest Time: 10 Weeks

Outdoor Harvest Time:

Breeder's Description: Somativa a mix of genetics from all over the globe. In 1994 the cannabis strain of Sensi-seeds seed bank " Jack Herer" won first prize those seeds were grown mixed first with big skunk Korean, then with a special super skunk. The result is a thin leafed wiry big yielding plant that takes 10 weeks to flower. The buds you get are some of the sweetest tasting flowers you have ever tried. The high is a very uplifting buzz that is good for playing music, meditation, prayer, or any kind of friendly contact between human beings. You need to stake these plants.

White Light

Type:

Lineage: Bubblegum and White Widow

Indoor Harvest Time: 10-11 Weeks

Outdoor Harvest Time:

Breeder's Description: White Light is a of Bubblegum and so White Widow and is my most bubblegum smelling plant. It tastes like candy. It takes 10 to 11 weeks to finish so don't pick it too soon. The bud is quite dense with a very white green appearance and many, many crystals. The high is very rich, make sure to get yourself comfortable after you smoke it. May the White Light guide you.

White Willow

Type:

Lineage: White Widow and Afghani Hawaiian

Indoor Harvest Time: 10-11 Weeks

Outdoor Harvest Time:

Breeder's Description: White Willow named after my daughter who is quite a strong human being, is also quite a strong plant. A cross of White Widow and Afghani-Hawaiian this plant has massive buds and large THC crystals. The color of the leaves is a dark almost bluish green. The taste is sweet like some special desert. The smell is Afghani-sweet. It takes a while to finish so again you need experience for this one. Quite a good yield. Strong high.

Soma - Feminized

Buddha's Sister Soma Skunk V+

Type:

Lineage: Reclining Buddha and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Previously called Soma Skunk V+, this variety was renamed Buddha's sister to suit her tendencies and advance her appeal to Amsterdam coffee shops. What's in a name? Directly after this deliciously good weed acquired a more intriguing name, she regularly sold out at the coffee shops, and remains one of the best selling weeds available at De Dampkring.

Citralah

Type:

Lineage: Chitral and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Citralah a great strain for making hash from. Half it's genetics come from Chitral Pakistan where it is solely used for hash production, and Afghani Hawaiian for the other half. This plant has a strong citrus like smell and taste. It has a very good yield and takes 9 to 10 weeks to finish. Great finger hash when manicuring and great water hash as well . Nice daytime weed.

Haze Heaven

Type:

Lineage: Northern Lights #5, Haze and Afghani Hawaiian

Indoor Harvest Time: 10-11 Weeks

Outdoor Harvest Time:

Breeder's Description: Haze Heaven is just that, a haze that doesn't take as long to finish as most others, a great yielding plant with giant buds, and that great haze flavor with that hint of Afghanistan in the back of your mind. As with all strains if you don't give your plants just the right amount of quality energy that they need on all levels they will get stunted and take longer to finish. This one again is not for inexperienced growers, experience in patience with cannabis harvest's is definitely needed. This haze doesn't put you in a daze, it takes you to your center.

Kahuna Soma #9

Type:

Lineage: Super Skunk, Big Skunk Korean, Jack Herer and Afghani Hawaiian

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: One of Soma's favorite strains, Kahuna is a 4-way cross that brings together a wide set of influences for a complex high. Soma recently renamed his Soma #9 strain Kahuna, which is a Hawaiian title for a religious or spiritual leader that literally means "Keeper of the Secret." The Kahuna variety has both tropical influences in its parentage, and spiritually attuning effects when used. A medium-sized plant, Kahuna produces few side branches and a top bud that will impress you with its length and density. Due to the big, tight buds, conditions must be tended carefully for this variety. For indoor gardens, attention to humidity levels is key for mature buds that are mold-free. While recommended for indoors where variables can be controlled, outdoor growing is possible in reliably dry climates, although an unseasonably rainy season could ruin the promising look of these thick buds with insidious mold. When Kahuna's proper conditions are met, the yield potential is fantastic, offering a harvest of up to 500 g per square meter in a standard sea of green. This variety has shaken a little pepper into an otherwise sweet-tasting puff. . very sweet smelling variety with a powerful cerebral high that invites creativity. This is great daytime pot, complementary to most introspective activities, and comfortable for socializing with colleagues and friends. Kahuna offers medicinally valuable properties for many conditions without interfering with quality and clarity of one's thought.

Lavender Soma #10

Type:

Lineage: Super Skunk Big Skunk Korean and Afghani Hawaiian

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time:

Breeder's Description: Soma #10 brings together a world of weed. Strains with histories that traverse Afghanistan, Hawaii, Korea, the U.S, and Europe are all melded together in this 3-way cross. An exotic looking strain, Soma #10 develops the darkest purple coloration you can imagine. The color is intense, with the leaves turning nearly to black at the ends, they are so deeply saturated with color. The extra dense buds give off a sensually spicy smell akin to Afghani hash. The high calyx to leaf ratio and the legginess of this plant make for

simplified manicuring. While not as tall as the Haze strains, Soma #10 can shoot to tall heights when allowed an extended vegetation period before being placed into the flowering phase. If grown in a sea of green, Soma recommends a shortening the veg cycle in order to control the height. This strain will also do well as a multi-branched plant. Outdoors, this variety can thrive in a most temperate zones, although arid climates known for their rich agricultural promise are of course optimal. Soma #10 has a flavor that is similar to Afghani hash, producing a captivating high that circulates through every chakra. A terrific evening or rainy day smoke, Soma #10 will leave you feeling relaxed and mellow, possibly to the point of sleep.

Reclining Buddha

Type:

Lineage: Holland's Hope, Super Skunk and Big Skunk Korean

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Reclining Buddha is a 3-way hybrid that combines the genetics of Holland's Hope with Super Skunk and Big Skunk Korean. Circulating in the Netherlands during the 1980s, Holland's Hope is a mold resistant strain with a very close nodal structure whose name can be attributed to her success in outdoor grows, even in Holland's wettest season. Reclining Buddha has held this characteristic, and combined it with the enjoyable smell and yields of its other two parents. Previously named Soma Skunk V, the new, enlightened name came out of a philosophical session prompted under her influence. A fairly short plant, Reclining Buddha must remain in vegetative phase for a considerable amount of time to become a big plant. She also will not make a lot of side branches, and the ones that do tend to be smaller, a combination that predisposes this variety to do well with minimal effort in a sea of green set-up. Reclining Buddha's buds are tight and narrow, allowing moisture to escape easier than short thicker bud formations. Try this one outdoors even in humid locations for a covert plant that delivers high-quality yield. Buddha buds form many dark auburn hairs early. When everything around it still has white hairs, Reclining Buddha's hairs have turned a color that tempts you to harvest, but exercise patience. Reclining Buddha needs a full 9 weeks to reach maturity, and the high just gets better with the wait. This medicinal quality cannabis has the taste of a sweet cherry candy and an uplifting creative high that is lucid and mentally stimulating. 3rd place, 1999 High Times Cannabis Cup, best indica.

Rock Bud Soma A+

Type:

Lineage: Super Skunk, Big Skunk Korean, Afghani, and Afghani Hawaiian

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: Soma A+ may become the pet of the class. Short to medium in height, this mostly indica strain displays the bushy structure and dense buds of its Afghani heritage. She is a good sea of green plant since height and branching are easy to manage. With an extended vegetation period, Soma A+ can be coaxed into a larger plant, and will perform well while still being short enough to stay inconspicuous in an outdoor garden. A fast bloomer, Soma A+ finishes in about 8 weeks and wards off spider mites, often being the last plant still holding these pests at bay. The yield makes this a bud for a connoisseur rather than a commercial grower, but the ease of growth and the quality of the final product will make this a coveted weed to share with your inner circle. Somango

Type:

Lineage: Super Skunk, Big Skunk Korean, and Jack Herer

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: Somango blends the multiple hybrid Jack Herer with Big Skunk Korean to form the fruitiest of all Soma's strains. Previously known by Soma #5, this complex cross was renamed for its tropical mango aroma and flavor. Somango is optimal as a multiple branch plant, since its genetics encourage long side branches and a height on the taller side. A sea of green method can still be undertaken, but branching and height will need to be controlled. Soma prefers to grow on soil indoors with fully organic nutrients, but other media will also give satisfactory results. As it matures, the leaves shade to purple and the buds become covered in a carpet of crystals that makes fine finger hash. While a moderate yielder, Somango's bud possesses sublime qualities. The fragrant and tasty Somango smoke delivers a buzz that is very

uplifting and mentally stimulating in its effects. You can smoke this pot without turning into a remote control-wielding couch potato. Euphoric and alert, Somango is a good choice.

Somanna Soma Wide+

Type:

Lineage: Super Skunk, Big Skunk Korean, C. Chinensis, and Afghani Hawaiian

Indoor Harvest Time:

Outdoor Harvest Time:

Breeder's Description: Somanna formerly Soma Wide+ is the only strain with cannabis Chinensis a type that grows in China, it has a very interesting characteristic of sometimes making an extra budlet on the stem of the large fan leaf. It grows quite wide in that the side branches really become a large part of the plant. You have to give it room. It has quite a nice color, limey green with very orange hairs. It looks a lot like the old orange bud, but tastes much better. Mellow sativa high.

White Willow

Type:

Lineage: White Widow and Afghani Hawaiian

Indoor Harvest Time: 10-11 Weeks

Outdoor Harvest Time:

Breeder's Description: White Willow named after my daughter who is quite a strong human being, is also quite a strong plant. A cross of White Widow and Afghani-Hawaiian this plant has massive buds and large THC crystals. The color of the leaves is a dark almost bluish green. The taste is sweet like some special desert. The smell is Afghani-sweet. It takes a while to finish so again you need experience for this one. Quite a good yield. Strong high.

Spice of Life

Adventure Mix

Type: Mixed varieties

Breeder's Description: A lot of Sweet Tooth... Shishkaberry, Blue Domino, Big Treat, California Dream, Tropical Treat, Jack Herer, Ortega, Strawberry, M39 - all hit with a Sweet Tooth. These male plants were put around the perimeter of the last Sweet Tooth garden specifically for a lovely Adventure Mix. If you are just looking for some new mothers and aren't as concerned with pedigree, you

will find a wide variety of very original plants in here.

Blockhead

Type: Mostly Indica

Lineage:

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Middle of October

Breeder's Description: The mother was selected from seed developed by one crazy yanqui. The exact origins are somewhat of a mystery. It is strong pot. The feminized mothers were fairly homogenous, although from several of the line, and another more extreme sativa. This mother had indica-like buds on a sativa sized plant. Crossed with the same SwT father as Sweet Tooth #3, I am sure you find it distinctly different from anything on the market. It should probably not even be on the market as it encourages psychosis. Not good for unstable folks! It has been known to magnify neurotic behavior.

Blue Domino

Type:

Lineage: Craig's Skunk X DJ Short Blueberry

Indoor Harvest Time: 6-7 Weeks

Outdoor Harvest Time:

Breeder's Description:

Blue Satellite #1

Type: Indica/Sativa

Lineage: DJ Short Blueberry Sativa X Shishkaberry

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: End of September, beginning of October

Breeder's Description: The Blue Satellite #1 is the result of a rare, Blueberry Sativa mother, pollinated by a choice second generation Skb male. This a flexible plant that trains well. The smell is astringent, like cleaning fluid. Very kind! The yield of the mother is below average, but with the Skb influence you can expect to find bigger, more vigorous specimens, as well as the skinny head stash of the mother. The quality is unsurpassed for the head...

Some mutations in the leaves, don't worry about them. Those might be the ones you want!

Blue Satellite #2

Type: Indica/Sativa

Lineage: DJ Short Blueberry Sativa X Sweet Tooth BX2

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: End of September, beginning of October

Legend's Ultimate Indica

Type: Mostly Indica

Lineage: Ortega X Sweet Tooth BX2

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: Late September

Breeder's Description: The "Legends Ultimate Indica" is a combination of our two most favorite indicas. This F1 hybrid was mothered by a previously unreleased Ortega plant from California. The Ortega's heavy indica traits shone through with its' tight buds and extremely stoney finish. The father, a second backcross Sweet Tooth from Spice of Life Seeds, adds the sweet and pungent flavor Breeder Steve strains are know for. She is a heavy yielder that won't disappoint.

Moonshine Rocket Fuel

Type: Mostly Indica

Lineage: Blue Velvet X Blue Moonshine

Indoor Harvest Time: 9 Weeks

Breeder's Description: Medley of Moonshine Rocket Fuel is the first peak at some special work being developed under the Joint Project Label, between DJ Short and Breeder Steve. This is some potent pot, containing the best of Blue Moonshine and Blue Velvet. These first seeds, are the secondary picks on the way to the finished product Moonshine Rocket Fuel, and as they are in short supply, and never to be reproduced, these are an interesting edition, containing three major phenos. Classic Blue Family appearance, some good yielder, frosty and flavorful. Each plant will be unique. All will finish in 9 weeks.

Shishkaberry #3

Type: Mostly Indica

Lineage: Afghani hybrid (red and yellow) X DJ Short Blueberry

Indoor Harvest Time: 7-8 Weeks

Outdoor Harvest Time: First week of October

Breeder's Description: The berry's on the beef. These plants are the heavy early. Mothered by two Afghani hybrid cousins, the red and yellow. These were selected for yield and resin productivity respectively. The father was the most incredibly resinous. Blueberry Male from DJ Short Collection. This male had tight stamen formation. Solid purple male clusters as firm as then flower.

You will have a high yield of very large buds and few to no branches. The buds are exceptionally frosty with some purpling. A tangy and tastier aroma than other big yielders. The gland production will amaze you as you screen your trimmings. Also very potent and easy to trim.

Besides the intense blueberry jam aroma of the father, the most distinctive aspect of the plant was its chromatic resin. The top male bud was cured, burnt, and passed the test. The thickest male from the Shishkaberry Red line was backcrossed to the original Yellow to complete this amalgamation of yield, flavor and power.

The heavy early. Large production mother (mostly Afghani) crossed with a glistening Blueberry Male, for added flavor. Frosty leaves produce exceptional screening dreams.

Sweet Blue

Type: Indica/Sativa

Lineage: Sweet Skunk X DJ Short Blueberry

Indoor Harvest Time: 8-10 Weeks

Breeder's Description: The first extremely popular Spice of Life Seeds release from 1994 was the Sweet Skunk. My f1 selections from those seeds netted two very sativa specimens. They truly stood out from the rest of the pack. Almost Hazy, but with a different sweetness. One of those Sativa expressions was shared it was pick #10. Eleven years later it is still grown widely as a choice strain for the connoisseur. Although it is an f1, and certainly unstable, we just had to cross this mama with some Blueberry pollen, as well. DJ Short provided the pollen and that makes this new release a Joint Project strain. We hope that you will find some unique deliciousness within. Enjoy!

Sweet Tooth 1.1

Type: Mostly Indica

Lineage: Sweet Pink Grapefruit X DJ Short Blueberry

Indoor Harvest Time: 8 Weeks

Breeder's Description: A decade of Sweet Tooth. For the tenth anniversary edition we have prepared a very special release. The 1.1. The new original. We took the same classic Sweet Pink Grapefruit and hit her with Blueberry pollen provided by DJ Short, in the last Blueberry family production round. This Joint Project release contains 50%SPG/50% Blueberry just like the original f1. This f1 will provide the grower with fruity, colorful buds, and an extremely pleasant buzz. For awhile now the Sweet Tooth has been keeping us giddy and foolish all day long...

Sweet Tooth #3

Type: Mostly Indica

Lineage: Sweet Pink Grapefruit X Sweet Pink Grapefruit/DJ Short Blueberry BX2 (ie. Sweet Tooth)

Indoor Harvest Time: 8 Weeks

Outdoor Harvest Time: Middle of October

Breeder's Description: Sweet Tooth #3 (fourth generation, 3rd Backcross to Sweet Pink Grapefruit mother). This Sweet Tooth is the result of one backcross line wherein the goal in searching the father was an emphasis on the taxonomy and aroma of the original SPG mother. The Grapefruit is a true favorite among growers and consumers. It is possibly the most cultivated strain among commercial producers in Vancouver. The preceding BX2 seed that the father was selected from produced quite homogenous grapefruit-like plants, this generation should be suitable for crossing. The plant is high yielding for a Sweet Tooth yet retains the exceptional candied sweetness this strain is famous for. A beautiful plant with a beautiful taste and a positive vibration. A smiling high is guaranteed from these heady flowers. The plants are quite hardy and easy to grow, and prefer a drier finishing time, as the buds become fat enough for mold to be of concern. These chunky monkeys often require staking but in a windy location they should be stout enough to hold their own (significant) weight. Does well as a small bush but will become a large bush given adequate growth parameters. Whether this is an exceptional commercial strain or head stash is for you to decide. I truly hope you enjoy these plants as much as I do. Indoors Flowering: 8wks Outdoors: mid.Oct.& Indoors Yield: Way Above Average (easily

500gms per meter) Outdoors: Above Average

Sweet Tooth #4

Type: Mostly Indica

Lineage: Sweet Pink Grapefruit & DJ Short Blueberry

Breeder's Description: Sweet Tooth #4 - Easy Plant to Grow, Very Sweet Aroma, Very Mold resistant.

Tropicana #1

Type: Mostly Sativa

Lineage: Tropical Treat (Mostly Columbian) X Sweet Tooth BX2

Indoor Harvest Time: 70 Days

Outdoor Harvest Time: Early November

Breeder's Description: Tropical Sweet, Tropical Treat mother (mostly Colombian) X Sweet Tooth BX2 P1. Something for sativa lovers. Not recommend indoors, unless you are fanatical. Plant it in the deep south.

The Tropical Treat mother ensures this hybrid leans towards the Tropical end of the spectrum. Very vigorous mostly sativa with a very candied taste! The yield is up, the flowering period, down. Definitely one that will be around for a while yet to come. Flexible plant, great potential for tall colas SOG, or used for training.

Tropicana #2

Type: Mostly Sativa

Lineage: Tropical Treat (Mostly Columbian) X Shishkaberry

Indoor Harvest Time: 70 Days

Outdoor Harvest Time: Early November

Breeder's Description: The same Tropical Treat mother as in Tropicana 1, but pollinated by the Shishkaberry this time. The flowering time is down, and the yield is up. Expect huge colas Sea of Green style. Flower the cuts immediately for tall colas without branches. The taste is on the nice side of spice.

Guaranteed to get you up and bring you down, sativa lovers will savor the taste. Takes you to the Caribbean!

THseeds

Akorn

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: This is another variety from the great northwest, originally brought over in 1995. The name Akorn was given to the plant by the people who grew it because of it's hard finished structure with tight cola's the size of "baby arms" make this plant a great producer the people who smoke this type called it snowbud because of it's incredible resin production, whatever you want to call this plant growers and smokers will just call it their favorite.

Big Fatty

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description:

Bubblegum

Type:

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: Yes we have it, the original Bubblegum. This has been one of the most sought out strains in al long time, and until now you have had only half the story. The O.G.B.G. was started in 1993 here in Amsterdam and was so interesting that the only room with the original mothers was broken into all clones stolen and mother plants killed (or so they thought) one of the mothers produced a single clone from a lower branch. This plant the 4th cross went on to win several Cannabis Cups for several and seed companies. Many people sold seeds of the Bubblegum, but you were only getting a lame hybrid at best. It's taken us 6 years to stabilize this plant for you. All good things take time, so get your hands on some today before they steal it!

Chocolate Chunk

Type:

Lineage:

Indoor Harvest Time: 56 Days

Outdoor Harvest Time:

Breeder's Description: Chunky solid Indica that flowers in 56 days, deep hashy flavor with a narcotic bite, dark green super wide leaves and over- exaggerated structure show you that this plant is a true indica.

Heavy Duty Fruity

Type:

Indoor Harvest Time: 60-65 Days

Outdoor Harvest Time:

Breeder's Description: One Word "Monstrous" will describe this plant. A huge producer with giant cola's will make any "bud waver" happy. Absolutely the best indoor producer we have seen yet. Ideal for planted method 20-30 p.s.m. But beware we don't call it heavy duty fruity for nothing, this plant smells Strong! So air cleaners or ozone generators are suggested.

The HOG

Type: Indica

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: Here it is, the 2002 High Times Cannabis Cup winner in the Indica category. A fast flowering fat greasy Indica, from Southern California. If you are looking for a great producer, and a heavy stoney smoke, the Hog will be your favorite.

Honeymoon

Type:

Lineage:

Indoor Harvest Time: 60-70 Days

Outdoor Harvest Time:

Breeder's Description:

KAL-X

Type:

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: Hash plant x Afghan skunk - this multi hybrid works equally well indoors and out. With a solid structure and a well balanced flavor we are sure you wont mind that it produces gobs of resin, and it does it all in 60 days, the hash plant used in this cross has been used since 86' without loss in vigor and was selected for one thing Resin Production!

Mendocino Madness

Type:

Lineage:

Indoor Harvest Time: 49 Days

Outdoor Harvest Time:

Breeder's Description: This one of our fastest hybrids. We crossed a Northern Cali plant called "Madness" that would finish the first week in September with our fastest male breeder plant, that was responsible for the original Kwiksilver. The results will amaze even experienced outdoor growers, great structure and yield along with bug resistance make this plant a top choice for anyone who braves the outdoor experience.

MK-Ultra

Type:

Lineage:

Indoor Harvest Time: 8-9 Weeks

Outdoor Harvest Time:

Breeder's Description: The legendary G-13 crossed with L.A.'s finest, the O.G. Kush. This mix of two top notch Indicas produces very tight resin coated buds. Piney flavor, that lasts and lasts... with a truly hypnotic high, great head stash ! Winner of the 2003 High Times Cannabis Cup, Indica category.

Mr. Bubble

Type:

Lineage:

Indoor Harvest Time: 65-70 Days

Outdoor Harvest Time:

Breeder's Description: Kali Mist x Bubblegum, These two Cannabis Cup winning varieties brought together in 1995 by "accident" prove to be the perfect match. The flavor of the Kali Mist and the structure of the Bubblegum go hand and hand to create a strain that you'll never let go down the drain!

Puna Budder

Type:

Lineage:

Indoor Harvest Time: 55-60 Days

Outdoor Harvest Time:

Breeder's Description: Looking for something exotic? Superior Hawaiian genetics dominate the plants appearance, smell, and taste. Stable Afghan lines smooth out the flowering times to a respectable 55-60 days, making this an ideal plant.

S.A.G.E.

Type:

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: Sativa Afghani Genetic Equilibrium If you love to smoke, grow S.A.G.E.! Testimony from Rob C. Clarke who understands the demands of both the smoker and the grower. While the spice of the Sativa and the punch of the Haze is a connoisseurs favorite, huge afghani yield is what the grower demands. To achieve best of both worlds, we have coupled the old-school Cali-Sativa with our chunkiest true Afghan breeder To produce a flavor packed plant with over 20% T.H.C. Just one taste and you will request what Cypress Hill, The Fun Lovin Criminals and Pharcyde swear by.

Sage N Sour

Type: Mostly Sativa

Lineage: East Coast Sour Diesel X S.A.G.E.

Indoor Harvest Time: 9 Weeks

Outdoor Harvest Time:

Breeder's Description: We wouldn't cross any plant with our favorite : the S.A.G.E.™, but then again, the Sour Diesel is no ordinary plant. With it's well balanced flavor and infamous strength and smell the S.A.G.E.™ has finally met it's match. With a shorter flowering time than the S.A.G.E.™ and a bigger yield than the Sour Diesel, you can now reap the benefits of this must have combo.

Skunk XXX

Type: Indica/Sativa

Lineage:

Indoor Harvest Time: 49-56 Days

Outdoor Harvest Time:

Breeder's Description: Stable 3-way hybrid. old favorite from our skunk collection!

Stinky Pinky

Type:

Lineage:

Indoor Harvest Time: 60 Days

Outdoor Harvest Time:

Breeder's Description: This is a beautiful, mostly Indica variety that has pink pistils highlighting some of the plants very distinctive budding pattern, rounded main cola with a "crown" of buds and not much more below, great sea of green plant.

Kushage

Type: Sativa

Lineage:

Indoor Harvest Time: 9-10 Weeks

Outdoor Harvest Time:

Breeder's Description: The age of kush has arrived"...THSeeds' latest hybrid, the Kushage will bring you the flavor of now. Every few years a new flavor emerges on the scene, and right now this is the one.

THSeeds' S.A.G.E. male has proven over the years to produce stable vigorous plants. They've coupled this with the most sought after clone-only plant with OG-er Kush, to bring you a balanced spicy sweetness combined with an almost instant buzz. Add to this outrageous vigorous growth, and you have a plant that will make any indoor gardener proud!
